A case of some importance to hospital almoners[1] was decided in the Ilford County Court on March 28 by Judge Davies, K C A young man was admitted to a hospital for acute jaundice and his father signed a guarantee that he would pay the patient's fees The form stated that the guarantee was for payment in accordance with rules printed on the back of the form These laid down that the duration of a patient's stay was usually limited to eight weeks, and that the days of admission and discharge were counted as one day and spoke of the responsibility of the medical officer for the patient's treatment during his stay ' at the hospital The patient left after about five weeks, and there was nothing in the evidence to show that he was expected to return He attended out patients A fortnight later the physician in charge told the father that the son should go back into hospital to have some fluid removed, and so he was readmitted He was never discharged again, and died of his original complaint four months later The accounts for this second stay were rendered to the father who paid some of them but left a balance unpaid The hospital sued him for the balance, but lost the action

By the Statute of Frauds a guarantee must be in writing and so the hospital in order to succeed, had to prove that the guarantee signed in respect of the first visit applied also to the expenses of the second His Honour explained that each guarantee has to be construed not necessarily literally but in the light of the surrounding circumstances The wording of the document did not specifically state a period but it pointed he thought, to an intention by the parties that the guarantee should be limited to the expenses incurred from the admission of the patient until he should leave hospital, unless his departure was intended to be merely temporary, which it was not The document contemplated a single stay at the hospital, and the father intended to guarantee this stay only If the guarantee applied also to any subsequent stay he considered it would expose the guarantor to a possible liability which it was most unlikely that the hospital would seek to impose or the guarantor to accept The patient might get better and leave the hospital for a time, and then get worse and return again and again for many years If the guarantor were held liable for all these visits his liability might extend to hundreds of pounds and last the greater part of his life The language of the document did not indicate such a conclusion but rather pointed the other way The written guarantee therefore did not extend to the second visit and no verbal or implied guarantee could be valid

Counsel for the hospital tried to establish that on the second visit the father had requested the hospital to accommodate his

[1] King George Hospital v Meech L J Newsp, C C R, 1938 5, 208 (July)

son and had undertaken responsibility for the cost The learned judge however found that no such undertaking could be implied although the mother had agreed to the charge and the father had paid some of the total As the son had been admitted on the first occasion on a guarantee and the regulations of the hospital required a guarantee and nothing had been said to suggest that he was now being admitted on different terms the father's liability remained as it had been on the first occasion He did not think that either party supposed that the first guarantee was applicable to the second visit though the hospital authorities may have thought that the father's conduct amounted to a new and this time an implied contract of guarantee—which of course cannot be enforced at law

A finding of a county court judge in law does not bind any court The decision however points the moral that an almoner should insist on a fresh guarantee every time a patient is readmitted

The Services

MILITARY OPERATIONS IN WAZIRISTAN

The King has approved the following awards in recognition of valuable services rendered in the field in connexion with the operations in Waziristan during the period September 16 to December 15 1937

Assistant Surgeon 3rd Class (now Lieutenant) MICHAEL CLARENCE ST JOHN CONDILLAC M R C S L R C P Auxiliary Force Medical Corps India

Mentioned in Dispatches

The names of Colonel R E U Newman C B E M C M B Ch B late R A M C (now retired pay) Lieutenant Colonel S Arnott D S O M D R A M C Captain Richard Ernest Waterson M B Ch B R A M C and Jemadar Gurbachan Singh Sethi and Jemadar Sant Singh Indian Medical Department have been brought to notice by His Excellency the Commander in Chief in India for distinguished services rendered in connexion with the operations in Waziristan during the period September 16 to December 15 1937

DEATHS IN THE SERVICES

Dr WILLIAM DELANO WALKER serving with the R A F Medical Branch lost his life when an aeroplane piloted by Lieutenant E J Boyle of the King's Own Scottish Borderers crashed near Richmond Yorkshire on August 16 both officers being killed Dr W D Walker was an Australian the son of a surgeon and had served in the Australian Army Medical Corps He graduated at Adelaide University as B Sc with honours in 1923 and as M B B S in 1925 After working as house surgeon and physician at the Adelaide General Hospital and Children's Hospital he came to England where he filled the post of resident at the Great Northern Hospital Holloway before joining the Royal Air Force as a civilian medical officer He was a Fellow of the Zoological Geographical and Photographic Societies and a member of the British Medical Association which he joined at the beginning of 1926

A correspondent writes Dr Walker was a man of great ability and exceptional versatility A promising academic career was interrupted during the war and he enlisted in the Australian Army Medical Corps when a second year medical student He next came to England in 1929 and since then had spent much of his time in fitting himself for what he had hoped to make his life work—service with the Australian Aerial Medical Service then only in its infancy but he knew it would develop into an essential feature of national life In London he held resident posts in twelve different hospitals and did extensive postgraduate study in many specialized centres At the invitation of Professor Jameson dean of the London School of Hygiene and Tropical Medicine he gave the first public lecture on The Flying Doctor in Australia with Air Vice Marshal Sir David Munro in the chair Acting on Sir David's advice he sought to gain experience of the medical aspect of aviation while attached as a civilian medical officer in the R A F and had spent nearly four years in this capacity He was a keen pilot and also spent some time in visiting aircraft factories and interesting the experts in the possibilities of the flying hospitals which he envisaged for the future

Lieutenant Colonel ROBERT LENDON ARGLES R A M C (ret) died at Hythe on August 2 aged 65 He was born on August 24 1872 was educated at St Mary's Hospital and took the L S A in 1899 After acting as resident casualty officer at St Mary's Hospital he entered the Royal Army Medical Corps as lieutenant on April 25 1900 attained the rank of lieutenant colonel on December 26 1917 and retired on June 28 1922 He served throughout the South African War 1899 to 1902 when he was employed in operations in Cape Colony and in the Orange River Colony and received the Queen's and King's medals with two clasps each He also served in the war of 1914–18 After retirement he was employed at Hythe He had been a member of the British Medical Association for seventeen years

Medical News

The annual congress of the Chartered Society of Massage and Medical Gymnastics will be held at the London School of Economics Houghton Street W C from September 19 to 23 The opening address on the morning of September 19 will be by Professor Henry Cohen on The Treatment of Disease in the afternoon of the same day Mr R Ollerenshaw will lecture on Pes Cavus Lectures on subsequent days will be given by Mr P J Verrall Dr W Brockbank Mr T T Stamm Dr N B Capon and Mr C Lambrinudi The Founders Lecture will be given this year by Professor D M Blair on The Anatomy of Movement Further details may be obtained from the Secretary of the Chartered Society Tavistock House (North) Tavistock Square London W C 1

The next Dutch Belgian Congress of Neurology and Psychiatry will be held in Ghent from September 23 to 25 Further information can be obtained from Dr A Lero 18 Rue Beekman Liege

A course in electrocardiography and other graphic methods of examination will be held in the Balneological University Institute at Bad Nauheim from September 19 to 22

The fourth annual meeting of German neurologists and psychiatrists will be held at Cologne from September 24 to 28 Further information can be obtained from Dr Brügelmann Hohenzollernring 75, Cologne

A general meeting of the International Therapeutical Union founded in 1934 will be held in Paris on October 12 under the presidency of Professor Loeper Further information can be obtained from Dr G Leven Rue de Teheran 24 Paris 8e

The acre of flat roof on the new building of Messrs Derry and Toms in Kensington High Street is covered with the beautiful Derry Gardens They have been thrown open since completion for the benefit of hospitals and nurses institutions in London and over £4 000 has already been received During the week Monday September 5 to Saturday September 10 they are to be seen by visitors from 9 a m to 6 p m on behalf of St Bartholomew's Hospital There is no charge for admission but a contribution of one shilling and upward may be given to the nurses in attendance

A sanitary code regulation prohibiting the importation breeding and sale of birds of the parrot family went into effect in New York State on June 1 and a similar regulation in New York City on July 1

In 1937 11 806 cases of small pox were notified in the United States as compared with 7 044 in 1936 The thinly populated North Western States were most affected The character of the attack was generally mild

An institute for instruction in nutrition has been founded in Berlin under the direction of Professor S Bommer

The office of the Faculty of Medicine of the University of Birmingham has now been transferred from the University Edmund Street to the Medical School Hospitals Centre, Edgbaston Birmingham 15 Telephone No Selly Oak 1162

EPIDEMIOLOGICAL NOTES

Poliomyelitis

The incidence of acute poliomyelitis continues to rise, 81 cases having been notified in England and Wales compared with 61 in the previous week the figure for the corresponding week last year was 25 In London the number notified was 3 the same as last week, while in Scotland notifications rose from 9 to 15 Of the 81 cases in England and Wales more than 2 were reported during the week in Braintree (rural) 5, Braintree (urban) 6, Brownhills (Staffs) 3 Birmingham 3 Dunmow 5, Grimsby 4 Kingston-upon-Hull 4 London 3, Reading 3, Swansea 8, Worthing 3 Last week (ending August 20) reports came to hand of 19 cases in which the diagnosis is confirmed Braintree 6, Gainsborough 3 2 each in Hale (Cheshire), Nottingham Colchester, Portsmouth and 1 each in Whitwell (Derbyshire) and Halstead (Essex), in the same week 1 death was reported in each of the following towns Braintree, Cowley (Oxford) Farnham, Grimsby, Hadleigh, Halstead, Portsmouth, South Shields

Typhoid Fever

The Farnworth (Lancs) outbreak of typhoid fever appears to be at an end, no cases having been notified since August 17 At August 23, 41 persons had been affected, of whom 5 have died A peculiar feature of the outbreak has been that the cases with one exception, were restricted to about half a dozen avenues on the New Bury Housing Estate So far the manner in which they were infected has not been ascertained

Diphtheria and Scarlet Fever*

Notifications of diphtheria in England and Wales during the week under review rose from 825 to 892 the chief centres in which increases were recorded are Birmingham 25 (14) Cardiff 8 (4) Easington 12 (6) Kingston upon-Hull 11 (9) Lambeth 11 (8) Newcastle 9 (7) Salford 13 (10) South Shields 16 (12) A high incidence of diphtheria which shows no signs of diminishing has been encountered in South Shields since the beginning of the year 250 cases have been notified with 45 deaths compared with 128 cases and 19 deaths during the whole of last year In the week under review 16 cases were reported, compared with 12 in the previous week while the occurrence of 3 deaths in the week indicates that the infection is of a severe type In London there was an increase from 113 to 115 in the week under review—Battersea 5 (1) Bermondsey 4 (0), Hampstead 2 (0) Lambeth 11 (8), Paddington 7 (2), Poplar 9 (3), Shoreditch 7 (5) There was a drop in the notifications for Scotland—113 as against 126—but in Eire a slight increase was recorded—43 compared with 39 in the previous week, in Northern Ireland on the other hand a considerable decrease was reported 13 cases being notified compared with 20 in the previous week Deaths from diphtheria in the 126 Great Towns of England and Wales rose from 16 to 21 and in London from *nil* to 1 of the 21 deaths recorded in the 126 Great Towns 2 each occurred in South Shields (2) Leicester (1) and Wolverhampton (0) In the 16 principal towns of Scotland there were 2 deaths from diphtheria—1 each in Edinburgh and Dundee There was an appreciable drop in the notifications of scarlet fever in England and Wales during the week—1 129 compared with 1 248—and in London also—107 as against 112 these figures were well below the median values for the last nine years

Primary and Influenzal Pneumonia

There was a slight increase in the notifications of primary and influenzal pneumonia in England and Wales during the week—429, compared with 423 in the previous week—while in London the incidence continues to drop—33, compared with 40 recorded in the previous week Both these figures are below the median values for the last nine years

Measles and Whooping-cough

There was only 1 death (in Kingston upon Hull) from measles in the 126 Great Towns of England and Wales during the week compared with 3 in the previous week The average daily admissions to the L C C fever hospitals were 7 (6) in the metropolitan boroughs in which measles is notifiable notifications of measles dropped in five, remained the same in two, and rose in four—Bermondsey 3 (0), Greenwich 4 (2) Hampstead 1 (0), and St Pancras 13 (8) In Scotland notifications fell from 66 to 49 in the week under review of the 49 cases 14 (24) occurred in Kirkcaldy, 12 (22) in Dunfermline and 5 each in Edinburgh (10) and Greenock (2) There was 1 death (in Dunfermline) from measles in the 16 principal towns of Scotland In the 126 Great Towns of England and Wales there was 1 death (in Lincoln) from whooping cough during the week compared with 5 recorded in the previous week In Scotland 52 (27) cases of whooping cough were notified—41 (21) in Glasgow—and 5 (3) deaths (all in Glasgow)

Cholera

During the week ended August 13 1 066 cases of cholera and 314 deaths from this disease were reported in Shanghai and in Hong Kong 39 cases with 17 deaths During the four week period ended August 13, 2 957 cases were recorded in the International Settlement and French Concession at Shanghai compared with 2 176 in the previous four week period (June 19 to July 16) In the same period there was a decline in the incidence of cholera in the ports of South China (Swatow, Canton Hong Kong and Macao) In British India 5 342 cases with 2,306 deaths were reported in the Central Provinces 620 cases with 192 deaths in Bombay (Presidency) 741 cases with 299 deaths in the United Provinces The epidemic in the Central Provinces which appeared earlier than usual this year does not yet seem to have reached its peak The number of cases increased considerably during the four weeks ended August 13 reaching 20 029 cases corresponding to a morbidity rate of 1 679 per 100 000 population (annual basis) During these four weeks the incidence of the disease declined in the Punjab and the United Provinces (Upper Valley of the Ganges) and in Madras (Presidency)

* Except where otherwise mentioned figures in parentheses refer to the week preceding the one under review

No 32.

INFECTIOUS DISEASES AND VITAL STATISTICS

We print below a summary of Infectious Diseases and Vital Statistics in the British Isles during the week ended August 13 1938

Figures of Principal Notifiable Diseases for the week and those for the corresponding week last year for (a) England and Wales (London included) (b) London (administrative county) (c) Scotland (d) Eire (e) Northern Ireland Median values for the last 9 years for (a) and (b)

Figures of Births and Deaths at 1 of Deaths recorded under each infectious disease are for (a) The 126 great towns (124 in 1937) in England and Wales (including London) (b) London (administrative county) (c) The 16 principal towns in Scotland (d) The 13 principal towns in Eire (e) The 10 principal towns (9 in 1937) in Northern Ireland

A dash — denotes no cases, a blank space denotes disease not notifiable or no return available

Disease	1938					1937 (Corresponding Week)					1929-37 (Median Value Corresponding Weeks)

QUERIES AND ANSWERS

Cleaning Slides for Blood Films

'J S M would be grateful for a really efficient method of cleaning slides for blood films to prevent the mosaic appearance consequent on grease

A Strict Vegetarian Diet

'W H S writes The great interest of the note by Sir Leonard Hill in your issue of August 20 (p 417) prompts me to inquire on the following points (*a*) Do the boy's parents also subsist on the diet enumerated? (*b*) Does the family live an entirely sylvan existence or does bread-winning in a town or city play a part in, say the father's life? Having regard to the experience in the late war when a meat dietary is said to have assisted in resisting the ill effects of the noise etc of bombardment it is interesting to speculate how the diet enumerated in the article would enable an individual to support a working life in a large city

LETTERS, NOTES, ETC

Adrenaline for Wasp Sting

Dr F O TAYLOR (Coldingham) writes A young woman came to consult me on August 18 she was almost unrecognizable—flushed swollen about the face and very embarrassed although she pluckily kept control A wasp had stung her on the second finger of the right hand about three quarters of an hour before while she was picking up some goods in a baker's shop The pulse was rapid and thready and headache was rapidly becoming severe I gave her ½ c.cm of 1 in 1000 adrenaline chloride (P D and Co) and made a little further examination The stung finger was twice the normal size the neighbouring first finger was almost as big and a red swollen ring was spreading over the back and palm of the hand Normal sensation had almost left the worst part but the patient said that she had a peculiar sensation of burning and swelling all over There were groups of acute circular weals on the arm and probably here and there all over the body Vision was only slightly affected though the eyes were bloodshot and I imagine that sight would have been disturbed if the treatment had not taken almost immediate effect She improved so rapidly that I thought all her troubles would soon be over the weals were almost flat and the swelling sensation was passing off I allowed her to go home and apart from a diffuse rash or blush with more itching which was soothed by bathing in a cool bath made up with a lotion the general symptoms had entirely disappeared the next morning The sting was obviously very much more poisonous locally than usual there was a patch about four inches round it which reminded me more of the results of the attack of a "cleg" (horsefly)

Abortion and the Law

Dr A J BROCK (North Queensferry) in the course of a letter on this subject, writes Surely it is up to the medical profession to consider the wider sociological bearings of this problem Obviously the law is now going to make it easier for doctors to practise abortion, they may do it if they consider that the prospective mother's health would otherwise be seriously jeopardized, and this clearly will afford our profession a much wider field for the operation and will relieve them (as well as their clients) of many immediate anxieties An urgent social symptom is thus relieved and tension temporarily relaxed May I now suggest the wider sociological implications? History surely shows that the increasing practice of abortion and birth prevention has always accompanied disintegration of society Indeed infanticide itself is another almost inevitable aspect of the same process I think it is time that the medical profession should wake up to the broad issues at stake

Medical Aid in Spain

The honorary secretary of the Spanish Medical Aid Committee writes Recent reports from Spain tell us of the magnificent way in which a modern hospital system is being evolved out of the emergency and improvised medical services of the earlier war days We are very proud of England's share in this, for the Spanish people acknowledge with deepest gratitude and appreciation our nurses and doctors, our instruments and equipment, our ambulances and supplies Unfortunately, we can never send enough The need grows with each air raid, with every offensive An x ray apparatus is very badly needed for the blood transfusion service in Barcelona They have now 14 000 donors on their lists, and all day and every day they have at least 200 contributing blood These donors give their blood once a month But by reason of malnutrition a large number of people in Barcelona and Eastern Spain are tuberculous It is essential to make sure that blood is not taken from these people In order to avoid this an x ray apparatus for screening chests is an immediate necessity This will cost £320 and we cannot supply it as we have not the money May we appeal for contributions? It would be a splendid gesture if this x ray apparatus could go out from the medical profession here to assist their colleagues in Spain Cheques should be sent to the Treasurers Spanish Medical Aid Committee, 24 New Oxford Street W C 1

New Treatment for Coryza

At the East Sussex Quarter Sessions this week counsel for the prosecution is reported to have said that people should realize that it was as easy to get rid of blackmail as of a cold in the head They had only to go to the police

Medical Golf

The ninth autumn meeting of the Sussex Medical and Dental Golfing Society will be held on the Brighton and Hove Golf Club's links on Sunday, September 18 In the morning singles against bogey will be played for the captain's prize and in the afternoon there will be two ball foursomes against bogey Full details may be obtained from Mr Harold Downer 40, Wilbury Road, Hove 3

Corrigendum

In the brief medico-legal report headed A Nurse is a Workman' in our issue of August 20 (p 429) it was stated that a nurse was injured by the explosion of a tin of antiphlogistine We are asked by the manufacturers of antiphlogistine to state that their preparation contains nothing of an explosive or dangerous nature, and that it is impossible for it to explode if used according to the directions

Vaccine with Sulphanilamide for Gonorrhoea

Mr A J COKKINIS and Dr G L M MCELLIGOTT write We note that our article on Sulphanilamide in Gonorrhoea published in the *Lancet* on August 13 has been quoted in a circular emanating from the medical propaganda section of a firm of manufacturing chemists, referring to the combined use of vaccine with sulphanilamide We wish to point out that all stock vaccines used in our clinic are prepared in the Inoculation Department of St Mary's Hospital

Spina Bifida Occulta and Certain Related Conditions —O Ask

Prostatectomy —The basis of this study is supplied by 409 transvesical prostatectomies performed in the period 1922 to 1937 There were forty eight post operative deaths—that is a mortality of 11 7 per cent The mortality during the last five years was reduced to 10 3 per cent

Presse Medicale

Paris vol 46 June 15 1938

Some Considerations on Parasitic Epilepsy —Ph Pagniez and A Plichet
*Role of Sympathetic System in Physiology and Pathology of Pain —A Salmon
*Transmission of Nervous Impulses in Central Nervous System —D Nachmansohn

Parasitic Epilepsy —The authors examined a number of cases of epilepsy alleged to be due to external or internal parasites both in animals and in man and conclude that parasitic epilepsy in man must be extremely rare if it occurs at all

Sympathetic System and Pain —Salmon describes the characteristic features of sympathetic as contrasted with central (including thalamic and cortical) pain and concludes that the sympathetic system exercises a dominating influence over the physiology and pathology of pain for there would appear to be a sympathetic element in most kinds of pain

Transmission of Nervous Impulses —The chief objection to the chemical theory particularly with regard to those nerves which supply the striated muscles and the sympathetic ganglia, is the extraordinary rapidity of the chemical processes involved (something of the order of 2/1 000 of a second) the author shows however that in view of the relatively enormous concentration of cholinesterase at the neuro muscular junctions and the synapses this ultra rapid hydrolysis of acetylcholine is quite feasible

Tuberculosis and Civil Servants —G Poix
*Intradermal Injections of Blood for Rheumatic Pain —J Le Calvé
*Do Dangerous Universal Donors Exist?—P Mouriau E Balgairies and L Christiaens
*The Gonococcus and Chemotherapeutic Superabortive Treatment —P Barbellion and A Garibaldi

Autohaemotherapy in Rheumatism —J Le Calve discusses the rationale of the analgesic effect of intradermal injections and gives his reasons for adopting autohaemotherapy for this purpose Forty five cases of rheumatic or rheumatoid pain were treated including sacro iliac rheumatism, arthritis of the hip peri-arthritis of the shoulder sciatica, chronic arthritis deformans and chronic rheumatism In most of these cases the author also used injections of an oil containing organic sulphur

Dangerous Universal Donors —The authors discuss the significance of the so called dangerous universal donor both from the clinical and the haematological standpoint, and come to the conclusion that the fault lies not with the donor but with the recipient, and is probably related to some form of allergy or hypersensitiveness In any case it would seem to have no connexion with the highly specific phenomenon of iso agglutination

Sulphamides and Gonorrhoea —The authors have investigated the action of sulphamides (chiefly "1162F") in more than 200 cases of gonorrhoea at various stages They are of the opinion that the classical permanganate treatment remains the treatment of choice with two exceptions (1) *in recent* subacute anterior gonococcal urethritis, in which the authors superabortive treatment is indicated (this is a combination of silver vitellinate sulphamide, and anti gonococcal vaccine) (2) chronic gonorrhoea in which chemotherapy may be combined with local treatment

Adrenal Cortex Exhaustion and Shock —The literature dealing with this subject is summarized Cases are quoted in which adrenal cortex extracts have been employed with success to restore the blood pressure and blood chloride values in gravely ill patients Following success with the use of this treatment in cases of gas gangrene and general peritonitis, it has been used as a pre operative measure in fifty cases It is claimed to have reduced the degree of operative reaction and shock

American Review of Tuberculosis

Baltimore vol 37 June 1938

*Studies in Avian Tuberculosis I Avian Tubercle Bacilli in Generalized Disease in Swine II Comparative Virulence of Avian and Bovine Tubercle Bacilli for Rabbits and Guinea pigs III Sensitization Method of Differentiating Avian from Bovine Infection in Guinea pigs and Rabbits IV Possible Role of Avian Tubercle Bacillus in Infection in Man —A B Crawford
Effect of Human Tissue Juices on Tubercle Bacilli —Nell Hirschberg and Ll Arnold
Tuberculosis Control —R E Plunkett
Tuberculous Infection in Kingston Jamaica —C W Wells and H H Smith
*Fluoroscopy during Pneumothorax Treatment —L Cohen and J V Bhdy
Effect of Age on Total Pulmonary Capacity and its Subdivisions —N L Kaltreider W W Tray and H van Z Hyde
*Non caseating Tuberculosis —M Pinner

Avian Tuberculosis —The most important findings of Crawford given in four papers are as follows In typing the lesions of thirty six swine condemned for tuberculosis in five of the North Central States twenty one of the specimens were found to be affected with the avian type and fifteen with the bovine type of tubercle bacilli The bovine bacillus was shown to be decidedly more virulent for the rabbit than the avian type The sensitization method of differentiating avian from bovine infection in swine tuberculosis was shown to be specific dual infection with both bacilli may thus be detected by this method In the light of present evidence it does not seem that the avian type of tuberculosis presents more than a remote possibility of danger to man

Fluoroscopy during Pneumothorax —The most glaring error in the present method of pneumothorax study is the fact that screening is usually carried out in the erect posture while the refills are administered in the lateral posture The authors show that in these two postures the position of the lung may be different By making use of the lateral posture in screening, the cause of difficulty encountered in administering refills can be found and often easily remedied In certain cases it is of great advantage to administer the refill under actual fluoroscopic guidance The phenomenon of 'selective collapse' is discussed in relation to the above considerations [The paper is amply illustrated with case reports and clear diagrams]

Non caseating Tuberculosis —The available literature is analysed in an attempt to show that Boeck's sarcoid and related lesions such as uveoparotid fever certain cases of Mikulicz syndrome etc are manifestations of non caseating tuberculosis The characteristics of this form of tuberculosis are fully described and discussed

Relapse in Lupus Erythematosus after Treatment with Sodium Gold Thiosulphate —J L Callaway and J H Stokes
Cutaneous Hazards in Citrus Fruit Industry Brief History of Citrus Fruit in Florida and in California —L Schwartz
Stigmatization —J V Klauder

Studies on Porphyria —The authors indicate that an abnormal excretion of porphyrin occurs in association with ileus and peripheral neuritis as a toxic manifestation and in cutaneous conditions as a pre natal error of porphyrin metabolism in which megaloblasts are destroyed and a secondary anaemia results The association of trauma, compensatory pigmentation and hypertrichosis to protect from light epidermolysis bullosa, and hydroa aestivale is discussed Only protection from light and treatment of the anaemia, possibly with liver are recommended

Eczematous Eruptions —V Genner and P Bonnevie report a case of recurrent eczema originally thought to be due to the sun later found to be due to elm leaves They also report other cases due to magnolia leaves

Production of Staphylococcal α Haemolysin in a Chemically Defined Medium—G P Gladstone
Influence of Transmitted Leukaemia on Metabolism of Unirradiated Lymphoid Tissue—J Vetter and J S Potter

Enzymic Activity of Vaccinal Elementary Bodies—Suspensions of scrapings from extensive vaccinia lesions on rabbits' skin differentially and repeatedly centrifuged can be made to yield a concentrated suspension of vaccinia elementary bodies containing little other material. Such suspensions were tested for the presence of enzymes and found constantly to contain phosphatase and catalase but no dehydrogenase. It is considered that the enzymic activity demonstrated is a property of the virus itself. These observations are hence in conflict with the commonly accepted idea that viruses are incapable of independent metabolic activity.

Staphylococcal α Haemolysin—Empirical trials with various complex culture media containing chemically ill-defined ingredients such as meat extract have defined optimum conditions for producing staphylococcus toxin but without relating these to the presence of any pure constituent other than gases. Were it possible to produce toxin in a medium the composition of which is fully known the substances necessary to its formation might be identified and its own isolation in a pure state might be possible. The first of these aims has been achieved; good yields of α haemolysin having been obtained in a medium the entire chemical composition of which was known. The chief essential constituents identified were certain amino-acids; the effect on toxin production of such other constituents as sugars and salts and of the gaseous environment, were also studied.

Notes on Early History and Evolution of Department of Health of Montreal—Eugene Gagnon
Experimental Infection with *H pertussis* and Protection Tests in Mice—Nelles Silverthorne
Brucellosis in and around Vancouver—C E Dolman and Vivienne G Hudson

Tuberculosis Prevention—The various mass methods for prevention of tuberculosis are discussed. England stresses increase of non-specific general resistance and features better living slum clearance etc. France features development of specific resistance by vaccination while Canada and the United States have a tendency to lay stress upon elimination of the germ by eradication of bovine tuberculosis by segregating human cases in institutions for treatment and by closing open lesions whenever possible. A plea is entered for developing tuberculosis consciousness by education as a means of control for a disease that will not burn itself out by developing specific resistance.

Pertussis Infection and Protection—Of unvaccinated mice inoculated with fresh strains of *H pertussis* suspended in mucin 80 per cent. died but various pertussis vaccines and antigens gave 90 to 100 per cent. protection. The methods described are offered as a means of assessing the protective value of the vaccines etc.

*Studies on Experimental Hypertension VII Production of Malignant Phase of Hypertension—H Goldblatt

Vaccine Virus—Experiments with two strains of vaccinia virus indicate that infection in the rabbit can be produced by a single virus particle

Human Influenza in Swine—Antibodies neutralizing human strains of influenza virus have been found in the blood of some but not all, pigs born before the influenza epidemic of 1936-7 and not in that of younger animals This suggests that human influenza occurs naturally in swine, and supports the belief that true swine influenza took its origin in the human pandemic of 1918

Malignant Phase of Hypertension—Goldblatt has previously reported the production in dogs of prolonged arterial hypertension by constriction of the renal arteries By similar methods which have the effect of greatly reducing the blood supply to the kidneys he now claims to have produced the equivalent of malignant ' hypertension, with severe degenerative changes in arterioles, haemorrhages, and uraemia

Milk Epidemic of Angina originating from Cow with Mastitis and due to *Streptococcus pyogenes*—E J Henningsen and J Ernst
Action of Carcinogenic Tar on Lymph Glands—A Lasnitzki

Vitamin B Deficiency—In order to determine the effect of partial vitamin B deficiency such as may result from poorer diets in this country, a large group of rats was kept on a diet deficient in the B complex (mainly in B_1) throughout life a control group being given a supplement of wheat germ The duration of life was shortened and reproduction interfered with mainly in the sense of failure to rear young Gastro-intestinal lesions were more common but the frequency of lung lesions was no greater and there was no evidence of any increased liability to tumour formation

Streptococci in Milk—Two epidemics of milk borne streptococcal angina are described occurring in Doncaster and Denmark in which the cow responsible for infecting the milk was identified and studied The streptococci in each case were of Group A and possible human sources of the infection in the cow were discovered The mastitis caused was not easily recognizable in the early stages and the secretion of infected milk continued in one cow for six weeks in the other for thirteen months

Journal of Laryngology and Otology

London vol 53 July 1938

*Progressive Facial Palsy produced by Intratemporal Epidermoids—G Jefferis and A A Smalley
*Thyroxine Therapy in Otosclerosis—M A Goldstein
Case of Post auricular Sinus—R L Flett

Intratemporal Epidermoids—Such tumours are usually called primary cholesteatomata and have been looked upon as extremely rare The authors have collected six cases and believe that most epidermoids in the temporal bone are of embryonal origin, particularly when there is no evidence that chronic middle ear disease preceded the formation of the epidermoid The patients suffered from a progressive facial palsy due to the slow destruction by the 'tumour of the facial nerve trunk In the light of the authors observations the older views on cholesteatoma formation must be revised

Thyroxine Therapy—The late Dr A A Gray first suggested the treatment of otosclerosis by an agent which produces an active congestion of some duration The active principle of the thyroid gland was chosen and 1/64 grain of thyroxine dissolved in four drops of sterile distilled water was injected into the middle ear after puncturing the tympanic membrane with a small hypodermic syringe The author treated forty two cases of otosclerosis by this method controlling the results by careful audiometric tests of the hearing before and after the injection There was no improvement in nine cases,

very slight improvement in ten and definite improvement of the hearing in twenty three cases ranging from 5 to 50 decibels in several tone frequencies the improvement being maintained for at least six months

*Age of Delinquents in Relationship to Rorschach Test Scores—M J Pescor
Mental Defectives and Epileptics in Institutions in United States 1936
Statistical Matter Weekly List of Deaths Claims from Insurance Companies Prevalence of Certain Communicable Diseases in United States and Abroad

Blood Coagulation—A brief critical review is given of the current theories of the mechanism of blood clotting and their shortcomings Numerous experiments are described with diagrams and charts showing the influence of various factors in producing instantaneous speedy normal or delayed coagulation or failure to coagulate Evidence is adduced to show that the clotting factor acts quantitatively and an explanation is given of why the clot in a blood vessel does not pass the next bifurcation of that vessel

Rorschach Tests—A series of cards with symmetrical ink blots, some coloured are shown in succession to the subject and the time and nature of the response to the question What can it be? is noted Observational details of the responses are classified and deductions made therefrom It was found that age (17 to 77 years in 500 persons) is of no statistical significance but certain tendencies exist such as that older men choose original responses and the younger common or vulgar replies Abstract answers were rare in all groups and the time relation varied but little

Colour Photography of Larynx—H Effenberger
Sixth Congress of Italian National Fascist Association against Tuberculosis at Tripoli December 17 to 20 1937—J E Kayser Petersen

Collective Radiography—A large number of persons can be viewed in series on a film 2·4 cm wide The individual picture 2·4 by 3·6 cm is sharp enough to be examined with a magnifying lens, and can be enlarged if necessary The method is invaluable for mass investigations owing to its speed and cheapness [This method may go a long way towards solving the difficulties associated with mass investigations for the presence of pulmonary tuberculosis]

Leipzig vol 80 June 1938 Heft 3

*Fate of Cases of Phrenic Evulsion—L Graff
Tuberculosis in Pupils of High Schools—N B Ockonomopoulo
Contribution to Tomography of Lungs Critical Observation based on a Necropsy—H Bottner
Comparative Investigation of Two Diagnostic Tuberculin Ointments Diaphtise (Kuster and Pockels) and Moro's Diagnostic Skin Tuberculin Ointment—A Rehling
Proceedings of the Rheinisch Westfalisch Tuberculosis Association (Facility at meeting held in Düsseldorf on December 11 1937)—D Lochtkemper

Phrenic Evulsion—This is a follow up study based on 239 cases operated on between 1927 and 1929 89·5 per cent of the patients were traced, 50·4 per cent are dead, 10 per cent can be considered as cured The paper also gives details of the gastro intestinal symptoms that follow the operation

Tomography and Necropsy Findings—This case is of great interest because the necropsy findings did not correspond to the appearances seen in the tomograms Whereas the latter showed a whole system of cavities (according to the usual criteria of interpretation) at necropsy *only* a single cavity could be demonstrated

HARMLESS TO THE DIGESTION

—but do not imagine that The Doctor's China Tea is treated by some secret process There is no secret about it It is simply a blend of the choicest China teas, which happen to contain comparatively little tannin It is therefore *naturally free* from excess tannin And for that very good reason it is entirely harmless to the most delicate digestion For that reason, too, the medical profession approve and recommend it—and of course their patients enjoy its fine, delicate flavour A generous free sample will be sent to any doctor who would like an opportunity of trying the tea

THE DOCTOR'S CHINA TEA

Priced at 3/-, 3/6, 4/2, and a super quality at 4/8 per lb Harden Bros & Lindsay, Ltd (Dept 19), 30-34, Mincing Lane, London, E C 3

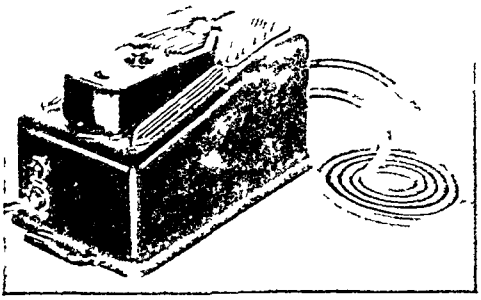
Shoes for the *"grown-up"* schoolgirl—

A correct ground plan is essential

FANCIFUL "FASHION" OR 'GOOD SENSE' STYLE?



Most shoemen realise the folly of fitting women's fashion shoes to feet that are not yet fully grown But Miss Seventeen can rarely be persuaded to continue to wear the low heel natural form shoes of her earlier school days and so often at this important stage feet are spoiled by being squeezed into shoes entirely unsuitable for growing feet with high heels and no allowance for normal natural development Clarks make a range of models especially designed for girls in their 'teens Good sensible shoes that are sufficiently smart to appeal to the eye yet carefully planned to safeguard the feet through the final stages of rapid growth

Clarks

SHOES AND SANDALS

safe for growing feet!

Illustrated leaflet B5 and name of local agent gladly supplied on request CLARKS STREET SOMERSET

THERE IS ONLY ONE INDUCTOTHERM

It is easy to recognise its appearance is distinctive nothing ornate hides its sturdy construction There are no gadgets to complicate its operation It has strength of character it sets out to do certain important things and does them consistently well

It was designed to make short wave diathermy circuit utilising *electromagnetic induction* available for the heating of the deep tissues of the body That it does When you buy an Inductotherm you acquire a superior means of producing heat for medical purposes for treatment of localised disorders or for the creation of therapeutic artificial fever

These are the unvarnished facts

The basic principle of the Inductotherm has been proved best for the purpose The apparatus from electrical and mechanical standpoints is a superior product You would use it often and with confidence as do the several thousands throughout the world that already own Inductotherms Because in your practice it would seldom be idle it would be profitably producing gratifying clinical results

Make this convincing test

Inspect an Inductotherm operate it apply it to yourself Assure yourself that it is well worth considering as an addition to your therapeutic equipment that it is the sturdy useful type of apparatus that you would benefit from greatly Simply read sign clip and post the handy coupon

WITHOUT OBLIGATION

BOWDEN HOUSE,

HARROW ON-THE HILL,

For the residential treatment of Functional Nervous Disorders

No case under certificate nor under the M T A

This home which was founded in 1911 is designed to provide for psychoneurotics a curative environment associated with modern psychological treatment modified to suit each individual patient. The treatment is in the hands of three experienced psychotherapists and most patients receive three hours of analytical treatment per week Occupational therapy of many varieties is available but not obligatory Recreations include tennis badminton billiards etc

On admission patients are examined by the diagnostic physician who advises on all physical treatment. As far as possible all necessary pathological examinations are carried out by the pathologist in the laboratory on the premises

LONDON HOSPITAL MEDICAL COLLEGE AND DENTAL SCHOOL

THE WINTER SESSION will open on MONDAY, OCTOBER 3rd

The London Hospital serves the East End of London and with eight hundred and ninety beds is the largest voluntary Hospital in England The Out patient Department which deals with a hundred thousand new patients per annum is extensively used for teaching

The size of the Hospital necessitates a large number of resident medical officers Every year seventy resident house physicians and house surgeons and eighty salaried non resident clinical assistants are appointed from among recently qualified students The opportunities which these appointments offer for obtaining clinical experience are invaluable

The Medical College is attached to the Hospital and is staffed by Professors of Anatomy Physiology Bacteriology Chemical Pathology Morbid Anatomy and Medicine of the University of London

Special Courses in Anatomy and Physiology for the Primary F R C S and advanced courses in Surgery for the Final F R C S Examination and in Medicine for the M D and M R C P Examinations are held twice a year

Entrance Scholarships and prizes of the total value of £950 are awarded annually Research Funds to the value of £113 000 permit of assistance being given to students and graduates engaged in medical research

The Medical College contains a modern Museum of Pathology and a Library provided with all the current medical periodicals in charge of a full-time librarian There is also an Athenaeum Club and Dining Hall a Gymnasium a Fives Court and two Squash Courts in the Students Hostel The Athletic Ground of 13 acres at Hale End is within easy distance of the Hospital

The Hospital is only 20 minutes from Charing Cross and Baker Street Stations For those who wish to live in immediate proximity to the Hospital there is accommodation for seventy five students in the Students Hostel

Further details may be obtained from the Dean Dr A. E. Clark Kennedy M D F R C P Physician to the Hospital and Fellow of Corpus Christi College Cambridge who is always pleased to meet students wishing to see the Hospital and College and to whom application for admission should be made

Turner Street London E 1

CITY OF BIRMINGHAM

MENTAL HOSPITALS DEPARTMENT

RUBERY HILL AND HOLLYMOOR DIVISION

The Committee of Visitors invite applications from duly qualified medical men for the position of JUNIOR MALE ASSISTANT MEDICAL OFFICER. The successful candidate will be required to reside in the Hospital.

The commencing salary will be £350 per annum plus the usual residential emoluments of board, lodging, laundry and attendance. An increase of £50 will be granted on completion of twelve months' satisfactory service and thereafter increases of £25 per annum up to a maximum salary of £450 per annum. An additional £50 per annum will be paid to a holder of the D.P.M. qualification or to a person obtaining the D.P.M. after appointment. All fees received in connexion with panel work will be required to be paid into the Borough Funds but for making insurance reports, reports on compensation cases and Coroner's inquests the fees can be retained.

A person who has held for at least six months a medical or surgical residential post in a general hospital will be regarded as having an additional qualification. Previous mental hospital experience is not essential but experience in the administration of anaesthetics is desired.

The candidate appointed will be required to pass a *medical examination* and will be placed on the permanent staff after one year's satisfactory service when he will be required to contribute under the Asylums Officers' Superannuation Act, 1909. He will be required to serve in such institution belonging to the Mental Hospitals Committee as they may from time to time direct. The appointment is subject to one month's notice on either side.

Applications, stating full particulars of qualifications, experience and appointments held, accompanied by copies of three recent testimonials must be addressed to the undersigned so as to be received not later than September 1st, 1938.

Town Clerk's Office, Council House, Birmingham, 1. F. H. C. WILTSHIRE, Clerk to the Committee of Visitors.

CITY OF PORTSMOUTH

TUBERCULOSIS OFFICER AND SENIOR ASSISTANT MEDICAL OFFICER OF HEALTH

Applications are invited for the above appointment from registered Medical Practitioners having special experience in the diagnosis and treatment of Tuberculosis. Previous experience in general public health and the possession of a D.P.H. are essential.

Salary will be at the rate of £750 per annum rising by three biennial increments of £50 and one of £37 10s. to a maximum of £937 10s., but the commencing salary will be fixed according to the previous experience of the successful applicant.

Applicants not to exceed 40 years of age.

The duties will be concerned mainly with Tuberculosis, but the successful candidate will be required to perform other duties in the Health Department and to deputize for the Medical Officer of Health during his absence in certain aspects of the work.

The post is designated as an established post under the Local Government and Other Officers' Superannuation Act, 1922, and the salary and emoluments will be subject to a statutory deduction of 5 per cent. under that Act. Successful candidates will be required to pass a medical examination and may reside in any district of Portsmouth or Southsea.

Application forms may be obtained from, and must be returned to, the Medical Officer of Health, The Guildhall, Portsmouth, not later than Saturday, September 10th, 1938.

Canvassing either directly or indirectly will be deemed a disqualification.

The Guildhall, Portsmouth. F. J. SPARKS, Town Clerk.

BOROUGH OF CHORLEY

APPOINTMENT OF MEDICAL OFFICER OF HEALTH

Applications are invited for the position of whole-time Medical Officer of Health and School Medical Officer.

Candidates must have had previous experience in the various duties attaching to the position of Medical Officer of Health, and in addition to the qualifications prescribed by statute must possess the Diploma of Public Health.

Salary £650 per annum, plus an allowance of £50 per annum for travelling expenses. The post is pensionable under the Superannuation Act, 1922. Its appointment will be subject to the Salary Officers (Qualified Medical) Regulations, 1924, and to the approval of the Local Government Board.

Further particulars and form of application may be obtained from the undersigned, by whom applications must be received not later than [illegible].

GEORGE JACKSON, Town Clerk.

The Prophylaxis of Diphtheria

The following prophylactics are made and standardised at

THE EVANS BIOLOGICAL INSTITUTE

APT Evans
(Alum Precipitated Toxoid)
A "two dose" prophylactic prepared by precipitating the antigenic fraction of formol toxoid of high value with alum. The first injection should be 0·1 to 0·2 cc. and the final injection 0·5 cc. after two weeks. For children of eight years and under.

TAF Evans
(Toxoid Antitoxin Floccules)
TAF should be used when the subject is more than eight years of age. TAF has a high immunizing efficiency whilst reaction is rare.

TAM Evans
(Toxoid Antitoxin Mixture)
Produces immunity more slowly and is generally recognized to be less efficient than APT and TAF.

FT Evans
(Formol Toxoid)
An efficient prophylactic. It may cause disturbance in some older children and in adults. It is recommended that its use be restricted to children between 1 and 8 years of age.

Dosage of FT, TAM., and TAF

These "three dose" prophylactics are administered subcutaneously. With the FT and TAM the doses are 0·5 cc., 1 cc. and 1 cc., but with TAF each 1 cc. A course of 0·5 cc., 1 cc. and 1·5 cc. has also been suggested. It is recommended that the intervals between the injections should be one or preferably two weeks.

In the very few instances where a positive Schick reaction is obtained after such a course of treatment further injections are necessary to establish immunity. It is recommended that the Schick Test be made not earlier than eight weeks after the third injection.

(Special prices and detailed literature will be forwarded to Public Health Authorities)

Ready September 5th

THE NEW THIRTEENTH EDITION

OSLER'S PRINCIPLES AND PRACTICE OF MEDICINE

Revised by **HENRY A. CHRISTIAN, M.D.**

Thoroughly revised, rewritten, rearranged and enlarged, the new edition is the most up-to-date textbook of medicine available. 1150 pages. Charts and Illustrations. 35s

Ready September 22nd

MEDICAL BACTERIOLOGY — **D. L. BELDING** and **A. T. MARSTON**

A textbook and not a reference book. The illustrations included are used to add to the information or to simplify descriptions and will consist of seventy line drawings and one coloured plate. 30s

FUNDAMENTALS OF INTERNAL MEDICINE — **W. M. YATER, M.D.**

Presents the minimum amount of knowledge of clinical medicine, a medical student or general practitioner should have. 30s

ESSENTIALS OF PATHOLOGY

LAWRENCE W. SMITH, M.D., and **EDWIN S. GAULT, M.D.**

Material has been selected to give the student only those basic pathological processes which can be applied to his study of medicine as his clinical experience increases. 108 large half-tone plates, each containing four to six gross and microscopic pathological illustrations, sometimes more. Many of the illustrations are of subjects that have never previously appeared. 30s

PARASITOLOGY With special reference to Man and Domesticated Animals

ROBERT HEGNER, FRANCIS M. ROOT, DONALD L. AUGUSTINE, and **CLAY G. HUFF**

Presents the material in a carefully revised form to include the many additions to knowledge that have been made during the last nine years. *Just Issued.* Illustrated. 29s

UNIVERSALLY RECOGNISED STANDARDS

WILLIAMS' OBSTETRICS

DISORDERS OF SEX

SEPTEMBER 1938

It is generally agreed that medical education still presents several troublesome deficiencies One of these undoubtedly is instruction on the problems of sexual disorders In *The Practitioner* for September a group of experts deal with these maladies and their management from different angle Dr Havelock Ellis rightly explains in his introduction that the medical chools provide for this subject little if any better than they did fifty years ago Medical practitioners and students will find great help therefore in this attempt to remedy a striking defect in the medical curriculum

PRINCIPAL CONTENTS

SEX EDUCATION AND THE GENERAL PRACTITIONER
By Havelock Ellis FRCP

SEXUAL DEVELOPMENT OF THE CHILD AND ADOLESCENT
By H Crichton Miller MD MRCP *Honorary Senior Physician Tavistock Clinic London*

EXTRACT FROM PREFACE:

We believe that there is room for a single volume textbook in which surgical teaching is based on the fundamental principles of anatomy, physiology and pathology.

Our object has been to provide students and practitioners with the essentials of modern surgery in as concise a form as possible, and also to produce a book which will be of practical use to students studying for the higher examinations. We have attempted to show that in many diseases the clinical picture follows logically on the pathological changes, and without entering into detailed controversy have indicated those lines along which still unsolved problems should be pursued.

INFLUENZA

In 'A Study of Epidemic Influenza' the Medical Research Council presents results of correlated clinical and laboratory studies undertaken during the epidemics of influenza and influenzal diseases in 1936 and 1937. Influenza due to virus infection can be distinguished from 'febrile catarrh' by laboratory methods the present work shows how far such a distinction can be made from symptoms and signs. The question is an important one in view of the possibility of prophylaxis and serum treatment. Report No. 228, 2s. 6d. (2s. 9d.)

EPIDEMICS IN SCHOOLS

School Communities offer somewhat special facilities for the investigation of epidemic and other illnesses, and the Medical Research Council has now made available a careful study, based on data collected over five years, which throws a great deal of light on the problem of school infections generally, and points to the important problems still unsolved and indicates how they may best be tackled. Report No. 227, 1s. 6d. (1s. 11d.)

SYPHILIS

'An Analysis of the Results of Treatment of Early Latent and Muco-cutaneous Tertiary Syphilis' is a study of 570 cases treated at Glasgow between 1919 and 1932. By following up over this long period cases of syphilis which had received a standard course of treatment, and of which the diagnosis had depended on constant methods, it was possible to see in their proper perspective the conditions which allowed the maximum amount of success, and those which were followed by comparative failure. No. 224, 2s. (2s. 2d.)

MENTAL DEFICIENCY

Material likely to determine the general course in research in Mental Deficiency in this country for some years to come is contained in Report No. 229 of the Medical Research Council. The work is based on researches undertaken since 1930 which involve a close clinical and genetical study of a representative group of 1,280 patients of all grades and types of mental deficiency. The cases studied were carefully graded and subsequently classified by clinical diagnosis. The Council states that the researches constitute a new and refreshing approach to the old and much-discussed problem of the relative roles of heredity and environment in the development of the human race. That the problem with which they deal is one of urgency is apparent from the fact that it is estimated that there are some 300,000 mental defectives in England and Wales alone. 2s. 6d. (2s. 9d.)

Portrait of a Great Surgeon

Surgeon Extraordinary

by LOYAL DAVIS, M.D., M.S., Ph.D. 8/6 *net*

TO-DAY every surgeon or physician must keep abreast of new discoveries and developments. Sixty years ago J. B. Murphy, the Irish-American surgeon, had to fight for recognition of his discoveries against professional jealousy and public disapproval. He invented the Murphy button for intestinal suturing, he was the first to diagnose and operate for appendicitis in its early stages. He was accused of courting publicity, he was brought up before the American Medical Association for charges of unethical conduct four years after he had been its President.

Dr. Loyal Davis, who here tells of Murphy's progress from the obscurity of a country druggist's assistant to world fame, is Professor of Surgery in the Medical School of North-Western University, U.S.A., being the eighth holder of the chair of which Murphy was the fourth.

DR DEIMEL GARMENTS are soft, porous and cleanly, never irritating, cumbersome, damp or overheating, but always satisfactory. They give greater comfort and safety and more satisfaction than any other form of underwear. The fabric absorbs perspiration freely, thus leaving and keeping the skin in proper condition. It even "tones up" the skin to all proper activity, yet without ever chafing it even in the faintest degree.

Can be washed in boiling water for sterilization without injury

A DIAGNOSTIC SET with ELECTRIC HEADLAMP

This set contains the components of the popular 3004 set together with a Wickham electric headlamp worked from the battery handle To assist in manipulating the various instruments a useful extension handle—the Plandle—is provided

The Headlamp uses ordinary spot light torch lamps with a carefully designed optical system producing a brilliant patch of even illumination adjustable from 1 to 10 ins in diameter It is light and having a sponge rubber washable forehead pad *is very comfortable to wear*

The Plandle facilitates the handling of separate components under awkward conditions allowing the battery handle to be placed out of the way in the pocket or on the table

NUTRITION AND PUBLIC HEALTH

"The importance of the new knowledge of nutrition as a factor in public health" is emphasised in the Annual Report of the Ministry of Health (1937 8) So also is *"the importance of discrimination in the selection of those [foods] which are more valuable for their growth-promoting and protective qualities"*

MARMITE

is known to be exceptionally valuable for its growth-promoting and protective qualities.

Marmite is an autolysed extract of fresh brewers' yeast It is rich in vitamin B_1 and the B_2 complex and provides principles of special efficacy in the treatment of certain forms of anæmia

Marmite is prescribed extensively in private practice and in hospitals, schools, and welfare centres

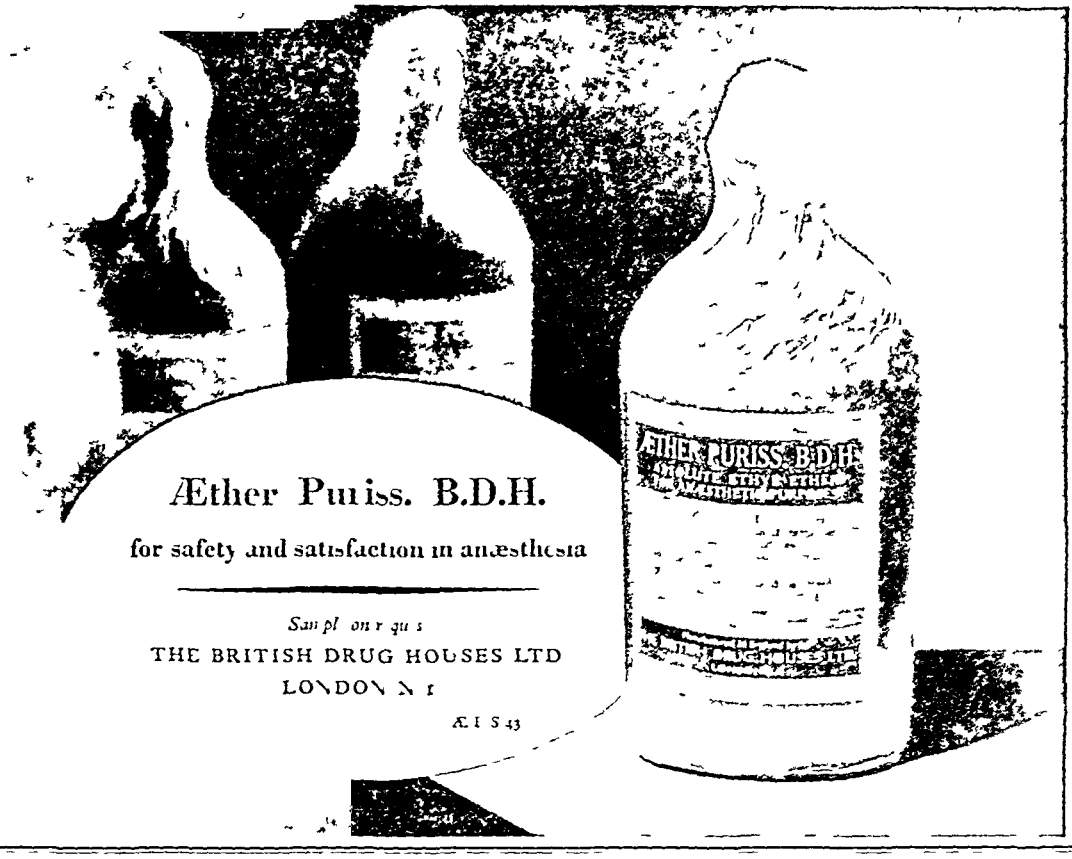
HOW IMPORTANT
ARE MINERALS IN THE DIET?

?

They are absolutely essential for the maintenance of an adequate state of nutrition However, not infrequently an apparently minor mineral deficiency may weaken the body's defensive mechanism to such a point that

Pregnancy, Infection, or
any other unusual tax



may lead to a prolonged period of convalescence.

!

'AMYTAL'

BRAND

Iso-amyl Ethyl Barbituric Acid

FOR SEDATION AND HYPNOSIS

The tranquil sleep of children is always the envy of less fortunate adults to whom at times this boon is denied because of sickness or other conditions which upset the psychic or emotional equilibrium

'Amytal' supplies the relaxation and sleep which are essential to recuperation of vital forces It may be prescribed wherever there is need to combat insomnia, restlessness, or apprehension A noteworthy margin of safety is characteristic of 'Amytal,' and since destruction of the hypnotic within the body appears to be accomplished rapidly there is little tendency to unwelcome side reactions or after depression

'Amytal' is supplied in ½ grain, ¾ grain, and 1½ grain tablets in bottles of 10 and 500

ANAHÆMIN B.D.H.

The dependability of Anahæmin B D H in the treatment of pernicious anæmia has been established in the routine of clinical practice during a period upwards of 2½ years In many cases an initial dose of 2 c c followed by 1 c c fortnightly constitutes effective treatment In those instances, however, in which it is impracticable to make periodic blood examinations, it is important that the patient should receive adequate medication, this can always be ensured by increasing the dosage of Anahæmin B D H or by more frequent injections, without fear of causing untoward effects

EFFICIENCY ESTABLISHED BY BIOLOGICAL TESTS AND CLINICAL USE

AN EXTRACT OF ADRENAL CORTEX FOR THE TREATMENT OF ADDISON'S DISEASE

AND OTHER CONDITIONS

LUCORTONE is an extract of adrenal cortex, containing the hormone cortin It is highly successful in Addison's disease Particularly striking is its rapid restoration of appetite, weight, strength, and feeling of well being

Successes have now been reported from the use of adrenal cortical extract in various other conditions, including neurasthenia, psoriasis, and hyperemesis gravidarum

IN ACUTE TOXÆMIA OF BURNS—*Lancet* 1936 June 20th, p 1400

Three cases of acute toxæmia from burns were treated with LUCORTONE and recovered In two of the cases, death within a short time could have been predicted almost certainly In the investigator's experience of these conditions, recovery under any methods of treatment previously used had not occurred The investigators attributed the recovery in these cases with every confidence to LUCORTONE

LUCORTONE is biologically standardized on adrenalectomized animals **It has now been further purified and concentrated** It is practically free from nitrogen and adrenaline, contains no irritant or toxic substance, and is sterile **One c cm of the extract is equivalent to 75 grams of adrenal cortex or about 110 grams of the whole gland** LUCORTONE is administered intramuscularly, intravenously (in crises), and subcutaneously (in chronic cases)

ANTISEPSIS

The full development of Antisepsis demands an agent which while efficient, does not damage human tissues, nor inhibit the normal function of the natural defences against infection That Verpine is efficient has been proved during years of clinical trial When used at fully antiseptic strengths Verpine has negligible effect on human tissues while one of its active principles encourages natural resistance to infection by promoting leucocytosis and is a protoplasmic stimulant Verpine, moreover is agreeable to use, and possesses a pleasant, refreshing odour

SAFE AND CERTAIN BIOLOGICAL THERAPY

★ ANTIPEOL OINTMENT

The rapidity and efficacy of the treatment of skin troubles with ANTIPEOL OINTMENT is primarily due to its polyvalent antivirus content. Since various strains of streptococci staphylococci and B pyocyaneus are the root cause of nearly all the common infections of the skin (acne eczema boils carbuncles shingles etc.) the destruction of those germs and the prevention of their further development is the first essential to healing Antipeol destroys those germs biologically without harming the tissues and healing begins immediately A test on an infected wound burn bedsore or persistent ulcer will quickly prove the value of ANTIPEOL OINTMENT and justify its use in any and every skin trouble

The LIQUID FILTRATE is indicated for ear infections suppurating wounds septic cavities (dental and others) and inflammatory conditions Used as a gargle with a little glycerine and water ANTIPEOL LIQUID is both prophylactic and therapeutic for infective conditions of the throat.

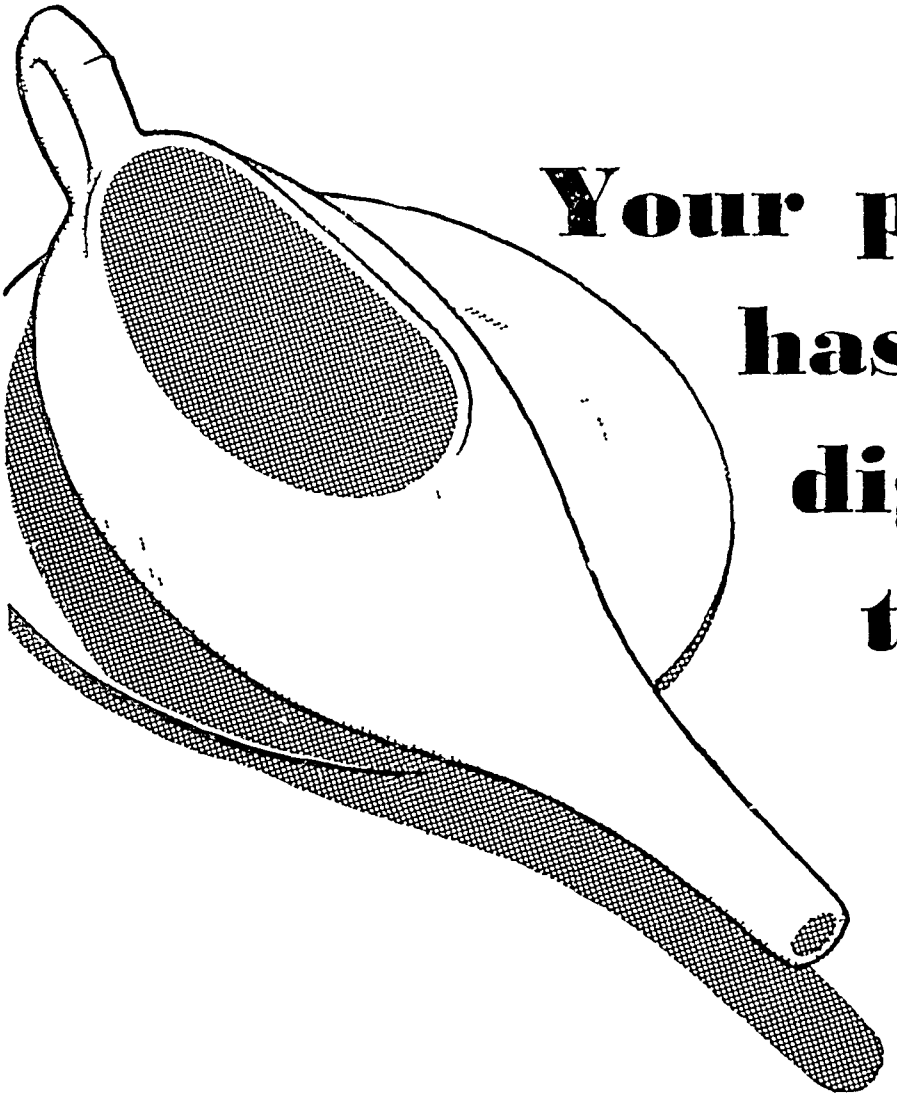
★ GONO-ANTIPEOL

The antivirus treatment of Gonorrhoea and Genito-urinary infections is effective because it introduces and reproduces in the human body the antibodies of the gonococci and reaches the remote sites of infection GONO ANTIPEOL contains the sterile vaccine filtrates of numerous strains of gonococci as well as the streptococci staphylococci and B pyocyaneus common to gynaecological infections It is thus a preventive of the development of germs and aborts the disease when already contracted Non toxic, non irritating yet potently microbicide GONO ANTIPEOL is a perfectly safe simple and effective therapy

★ OPHTHALMO-ANTIPEOL

In addition to the antivirus of various strains of streptococci staphylococci and B pyocyaneus OPHTHALMO ANTIPEOL contains the autolysins of pneumococci Fraenkel and gonococci since these micro-organisms are so frequently associated with eye troubles The semifluid nature of OPHTHALMO ANTIPEOL facilitates its dispersal over the affected area, and its soothing properties and efficacy are demonstrable from the first application It is perfectly innocuous and may be used on babies

★ RHINO-ANTIPEOL



The biological disinfection of the rhino-pharynx ensures antisepsis without the irritation associated with so many chemical disinfectants RHINO ANTIPEOL contains the antivirus and autolysins of the principal germs of naso-pharyngeal infections—staphylococci streptococci B pyocyaneus pneumococci pneumobacilli enterococci M catarrhalis and B Pfeiffer—as well as calmative de congestive ingredients ensuring a rapid clearing of the nasal passages During epidemics of colds influenza and diphtheria, RHINO ANTIPEOL is the ideal prophylactic, and rapid relief follows its application in cases of Nasal Catarrh Hay Fever Coryza and other infections of the naso-pharynx.

★ ENTEROFAGOS (ORAL)

Nature's normal way of combating microbic infection is the production of antibodies (bacteriophages) capable of destroying the germs ENTEROFAGOS is a combination of over a hundred strains of bacteriophages of the micro-organisms common to gastro-intestinal infections and when administered by mouth immediately gets to the site of infection and acts as a perfectly natural therapy The intestinal troubles of early babyhood invariably respond to ENTEROFAGOS as do seasonal diarrhoeas and the more serious dysenteric conditions of Typhoid and Paratyphoid fevers and Bacillary Dysentery Certain major maladies trace their origin to intestinal infections and the practical field of application of bacteriophage has by no means yet found its limit ENTEROFAGOS is equally effective in the veterinary field as greyhound and prize cat owners have found to their joy and the dreaded white scour in calves has no terrors when treated with ENTEROFAGOS A non irritant, innocuous medication administered by mouth ENTEROFAGOS disinfects and immunises the digestive tract, and is more rapidly effective than vaccines without the inherent disadvantages of the latter A clinical test will prove these facts

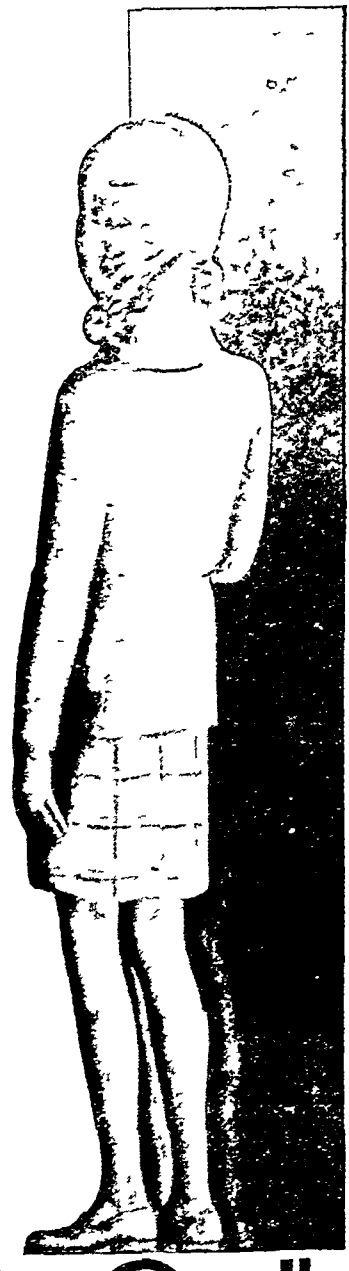
Your patient has acute digestive trouble

You prescribe a strict diet The patient must take nothing that can in any way aggravate his complaint Milk and "slops" alone leave him depressed and weak

When the digestion must be kept at rest, the unique stimulating properties of Brand's Essence are never contra-indicated Brand's contains no meat fibre or any other irritant matter—precipitates no solids in stomach or intestines and is easily and quickly assimilated

A copious flow of gastric juice is stimulated, but the acid is competently controlled at all times through adsorption by proteins The Essence can safely be administered even in cases of gastric ulcer Strength is maintained chiefly through Brand's protein-sparing action



BRAND'S CHICKEN OR BEEF ESSENCE

is never contra-indicated

BRAND & CO., LTD., SOUTH LAMBETH ROAD, LONDON, S.W.8

The

CONSTIPATED CHILD

Agarol simplifies the treatment of constipation by making it pleasant, children not only take Agarol with the greatest of ease but actually enjoy it

This palatable emulsion of mineral oil and agar-agar with phenolphthalein is the ideal treatment for constipation in children It is gentle in action and furnishes the natural stimulus to a comfortable and normal peristalsis Its capacity for lubricating the bowel, softening the faecal mass and easing its passage to the rectum and final expulsion, is unsurpassed

Further advantages of Agarol are that it is not habit-forming and, by mixing freely with the intestinal contents, it makes the occurrence of seepage extremely improbable

AGAROL

BRAND COMPOUND

Agarol is not advertised to the public Supplied in 4½ oz, 7½ oz and 17 oz bottles

Trial supplies to members of the Medical Profession on request

"ALOCOL"

Colloidal Hydroxide of Aluminium

Rational Antacid Therapy

APART from those cases due to actual organic disease, the treatment of the syndrome of symptoms known as indigestion generally resolves itself into an attempt to overcome hypersecretion of acid and to soothe the irritated or inflamed gastric mucosa

That Alocol possesses intrinsic qualities which render it particularly valuable as a gastric sedative and antacid is now well established Its freedom from the constipating effect of bismuth the laxative action of magnesium salts and the gas forming properties of sodium bicarbonate are especially noteworthy

Alocol forms with the gastric contents a colloidal jelly which has the power of adsorbing free hydrochloric acid Its markedly soothing effect on the gastric mucosa promptly relieves pain and discomfort It does not interfere with the normal process of digestion and is free from the danger of alkalosis

ALASIL

Safe Salicylate Therapy

THE popularity of acetyl salicylic acid is undoubtedly due to the fact that it is one of the safest and most effective non narcotic analgesics available Too often however its use has been discarded by the physician on account of its tendency to irritate the stomach and because entirely pure preparations are not always available

Alasil provides the beneficial therapeutic effects of pure acetyl-salicylic acid in such a form that it is acceptable even by disordered digestions This tolerability is due to the fact that it combines calcium acetyl salicylate—the least irritating salicylate compound—with Alocol a potent gastric sedative and antacid

Since Alasil is better tolerated than acetyl salicylic acid its use can be pushed or prolonged to a much greater extent than the latter Alasil is therefore an analgesic antipyretic and anti rheumatic which can be employed with complete confidence in all the many conditions in which such an agent is indicated

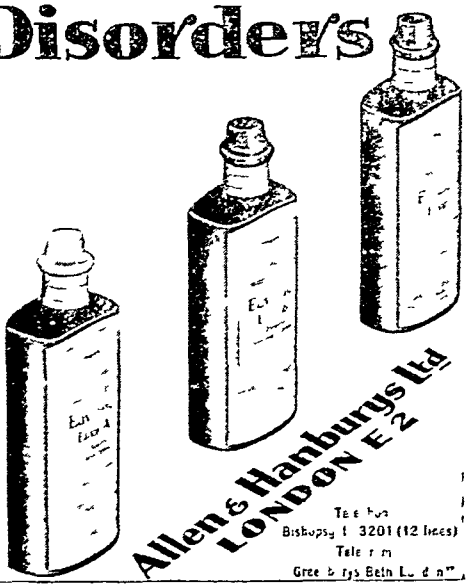
'Euvalerol' Elixirs
for the treatment of Nervous Disorders

The "Euvalerol' Elixirs are prepared from fresh valerian root by a special process which, while ensuring the retention of the active principles contained in the volatile oil of valerian, eliminates the objectionable odour that ordinary valerian products have



Euvalerol Elixir A
contains the odourless preparation of valerian in Aromatic Elixir Each fluid ounce is equivalent to approximately one fluid drachm of Tinct. Valer Ammon B.P

'Euvalerol" Elixir B
is Euvalerol Elixir A with the addition of phenyl barbitone gr ½ to each fluid drachm and with a light tint, for ease of identification.

'Euvalerol Elixir C
is "Euvalerol Elixir A with ammonium bromide gr 30 strontium bromide gr 15 and a small amount of sal volatile in each fluid ounce It has a darker tint than the two other Euvalerol Elixirs

For Prescribing 4 oz and 8 oz. bottles
For Dispensing 40 oz. and 80 oz. bottles.

INDICATIONS FOR 'SANATOGEN' No 11

DIARRHŒA OF CHILDHOOD

"Disturbing Death Rate"

A recent investigation of infectious disorders in the children's wards of British hospitals has shown how common and how serious infantile gastro-enteritis still is It retains high place in the official table of causes of death Two well-known New York epidemiologists a few months ago stated that in that City during the past ten years an actual rise had occurred in the death-rate from diarrhœa among the very young, in spite of the fall in the death-rate at later ages

Prompt and appropriate treatment is essential if the characteristic dehydration, collapse and disturbance of the acid-base balance are to be checked in time A distinguished children's physician advises in nearly all cases a preliminary twenty-four hours' starvation, only water, with or without orange juice, being given during that period Then comes the problem of affording, in gradually increased amounts, suitable nourishment Milk is rarely desirable, and fat should for a time be avoided, so, also, should sugar in other than the smallest quantities Whatever food is given should be readily digestible and absorbable, and should have small residue In numerous cases, 'SANATOGEN' has been found of the highest value at this stage

'SANATOGEN' is a carbohydrate and fat-free product of ninety-five per cent pure milk casein with five per cent sodium glycerophosphate It is readily digested and absorbed, leaving no appreciable residue, and it is non-irritating to the intestinal mucous membrane.

I prescribe Sanatogen in Gastro intestinal and debilitated conditions with beneficial results Lately I have prescribed it to Nursing Mothers It appears to improve the quantity and quality of the milk in cases where the baby is not thriving —M R C S, M B, D P H

'I started using Sanatogen in a case of chronic gastro intestinal catarrh The patient has done remarkably well Convenience in administration and palatability combined with high nutritive value, make Sanatogen the ideal food — M R C S L R C P

I have used 'Sanatogen for some years now and do not think there is any preparation to equal it for cases of nervous exhaustion convalescence after debilitating diseases, and after recovery from acute diseases of the gastro intestinal tract It appears to be most readily assimilated and its stimulating and strengthening effect is almost immediately appreciated by the patient — M D, D P H

'SANATOGEN'

(Trade Mark)

TAXOL

Formula

Intestinal glands - 0·05 grms
Biliary extract - - 0·10 „
Lactic ferments - - 0·05 „
Agar agar - - - 0·05 „
Fia tablet - - - 0·3 „

Initial Daily Dose
Two Tablets

Laxatives, it is well known nowadays must have two essential characteristics

1 The must be biological i e they must accord with and imitate in their action the natural physiological processes of the intestine

2 The must be capable of educating the intestine, so that the habit of a laxative is no formed and the intestine can function unaided when bowel adjustment is attained

Taxol has both these advantages

Taxol has not the violent irritant action of many laxatives and purgatives but stimulates the intestine by processes which resemble those of nature The intestinal gland which is an important part of its composition acts on the intestine by reinforcing the deficient function which has culminated in constipation This stimulating action is gentle and does not force the weakened intestine to efforts beyond its power which would culminate in aggravation of the constipation

Taxol is not habit forming It re educates the intestine to resumption of normal function unaided, thanks to the biological nature of its action It contains no irritant drug of violent and artificial action to which the intestine can become accustomed On the *contrary, many stubborn cases of constipation,* after a course of TAXOL, revert to normal and regular peristalsis

OSTERMILK

NUMBER 1 & NUMBER 2

Declaration of the measured vitamin D and iron content of Ostermilk, the successful dried-milk infant food, enables the medical practitioner to plan bottle feeding with as much regard for vitamin D and iron as for protein, fat, and sugar

Adaptation to the varying circumstances of age, weight and other individual characteristics is effected by the availability of Ostermilk in two forms.

OSTERMILK No 1
The formula of Ostermilk No 1 approximates to that of human breast milk Both the fat and protein content are diminished to suit the digestive capacity of the infant during the first months of life Suitable for premature and weakly babies
VITAMIN D 200 International units incorporated per pint of reconstituted milk
IRON 5 parts per million reconstituted

OSTERMILK No 2
is a full-cream full protein dried milk introduced usually at the third or fourth month (when the infant digestion is more strongly established) and is used thereafter for the remaining months of bottle-feeding
VITAMIN D 165 international units incorporated per pint of reconstituted milk
IRON 5 parts per million reconstituted

The variable vitamin D and the deficient iron content of cow's milk and its ordinary dried food derivatives is corrected during the manufacture of Ostermilk by the incorporation of these protective elements in dependable and appreciable amounts

Ostermilk, therefore, constitutes an estimable and calculable source of those nutritional factors which safeguard the infant against the risks of rickets and anæmia

Constancy of composition and the greatest possible bacterial purity are accepted features of Ostermilk Also, it is sold in sealed tins, a further protection against contamination

Not a new product, Ostermilk, composed according to tried and proven formulæ, has been a successful food in infant feeding for nine years, and is manufactured by a firm with special experience in the production of infant foods Ostermilk maintains the high standard of all G L products at a price which makes it available, through chemists, to every class of patient

EDUCATIONAL NUMBER, SESSION 1938-9

THE MEDICAL CURRICULUM AND PRESENT-DAY NEEDS

BY

SIR WALTER LANGDON BROWN, M D, D Sc, F R C P

Emeritus Professor of Physic in the University of Cambridge
Consulting Physician to St Bartholomew's Hospital

A recently qualified man once wrote to the late Sir Norman Moore asking his advice as to what he should read He received a list containing most of the English classics That was Sir Norman's characteristic way of urging that a medical man should possess a general education and not merely a technical training With the ever increasing demands on the student's time this desideratum becomes more and more difficult to attain Yet if a medical man is to fulfil his role adequately his interests must be wide and his general education sound The General Medical Council has taken a step in the right direction by trying to raise the standard of the entrance examinations to the profession As nearly every medical school is embarrassed by a surplus of students and as these students find it increasingly difficult to earn a living after qualification it is eminently reasonable not to open the door of entry too wide Recently I strongly contested the statement in the public press by a teacher of the preliminary subjects that it was generally recognized that the students of to day were mentally and morally inferior to their predecessors of thirty years ago Mr Hentschel who also teaches these subjects while agreeing with me on the general question pointed out that during the years of business depression a considerable number of quite unsuitable youths entered only to be rejected at the early examinations whereby we clinical teachers were spared much trouble There always seems to be an inverse ratio between business prosperity and the number of entrants into the professions All this strengthens the case for stiffening the entrance examination It is much kinder to both the prospective student and his parents that he should be checked at the outset from attempting a career for which he is not adequately fitted disappointment and loss of time and money would thus be avoided

A Recent Development

An interesting development of the last fifteen years or so has been the way in which the universities and hospitals have thrown the responsibility for teaching the preliminary subjects—chemistry physics and biology—on to the schools Thus an increasing number of students enter Cambridge having already passed the First M B and I gather this is the experience elsewhere The standard of teaching in chemistry at school has generally been very satisfactory and that in physics soon followed suit but for several years that in biology lagged behind At Cambridge we found that the percentage of rejections in biology was far higher for the school candidates than for those trained at the University Of late however that difference has been steadily diminishing—evidence of the improved teaching of biology in the schools Now the average boy will pass an examination permitting him to enter on his medical education at 16 and he will probably attempt to pass in these preliminary subjects a year later I am convinced that this is a mistake I am one of those who have strongly maintained that the study of anatomy and physiology should not start before the age of 18 If two years are taken over the preliminary subjects they will not be rushed in the way they too often are and there would be time for general education to be continued It is a mistake to restrict education to professional subjects so early in life as 16

Training in the Basal Sciences

The natural and proper enthusiasm of the teachers of these preliminary subjects is I think sometimes apt to lead them to forget that they are training students for medicine and not as embryo chemists physicists or biologists Since these basal sciences are the foundation on which medicine rests some knowledge of them is of course imperative But it is the principles rather than a mass of facts that are needed To this the teachers reply that principles are the last thing which the elementary student can grasp and that he must study for instance a considerable number of types in biology before he can appreciate generalizations I am impressed with the validity of that argument but am not satisfied that principles are more insisted upon now that a larger number of types are studied than formerly I believe the same thing applies to chemistry and physics which prove an excellent mental training and a practice in exact observation but I should like to feel sure that here too the principles were put in the forefront It is all to the good in my opinion that the amount of mechanics in the First M B at Cambridge has been drastically reduced The time occupied in the study of anything more than the most elementary principles of mechanics such as the parallelogram of forces and the properties of levers can then be devoted to electricity which provides just as much mental training Also it is more important that a medical student should know something of gamma rays rather than problems concerning elephants sliding down inclined planes

Mr H S Souttar wrote recently The medical curriculum has reached the limit of human endurance and it is only the genius of the medical student for clearing his brain completely after every examination that enables him to preserve his sanity It is a matter to which I have devoted some attention for I have sat on three committees each and severally designed to improve and lighten the curriculum The results were not impressive Everyone agreed that the curriculum ought to be lightened but each thought that the other man's subject could be cut down while more attention should be given to his own In this matter I ran true to type and stressed the importance of clinical medicine and a more psychological consideration of ill health There was in

fact a general consensus of opinion in favour of adding some psychology to the curriculum, but I do not see that it has been materially lightened thereby

How Much Anatomy?

But this is to anticipate We must return to the student, his preliminary studies cleared off, standing at the portal of his medical school rather ruefully regarding the superscription over it, "Art is long, but life is fleeting —a truth which must haunt him to the end of his days He is now about to start the study of anatomy and physiology When we wished to lighten the curriculum we found the anatomists steadfast, unmovable, always abounding in the faith that dissection of the whole body is necessary unto salvation Many non-anatomists do not think so "Son of man, can these dry bones live? How often I repeated those words as I dolefully studied them with Holden's *Osteology* by my elbow Technique, exact observation, and memory training—true, all these are developed thereby, but when men tell me that after demonstrating anatomy for ten years or so they rapidly forget the finer details and only remember what is of practical importance to their surgery, then I ask, How much anatomical detail can you expect the average student to remember? I fully realize that the teaching of anatomy is a very different thing to day In my time we were taught almost as much error as truth so far as the viscera were concerned To-day the student sees on the screen the stomach as it is in life and activity, he learns its variability within the limits of normal, and we too have had to learn the wide variations in the position of the colon compatible with health and normal function He sees the skeleton living and moving on the fluorescent screen But is it fair to expect the student to carry the whole weight of the old anatomy in addition to the new?

Physiology has become almost as abstract as physics, and a survey of examination results suggests that in some schools the teaching of it has departed from the lines suitable for the training of those designed to become doctors and not whole-time physiologists If this is so, it is to be regretted, for there is no sounder foundation for medicine than physiology

Materia medica has been cut down almost to the vanishing-point in most curricula, and rightly so Now that the old type of apothecary has disappeared, doctors do not handle the raw material from which medicines are made, and the time formerly occupied in learning about them can be more profitably employed As to the teaching of pharmacology, this has largely come under the aegis of the physiologist, who has in turn handed over histology to the anatomist I am strongly in favour of the examination in this subject being conducted by pharmacologists and clinicians working in pairs In this way its practical therapeutic aspect is kept to the fore

Bridging the Gulf between Pre-clinical and Clinical Studies

The committees to which I have referred were deeply concerned to try to bridge the gulf between pre-clinical and clinical studies Only in this way can the student be convinced that anatomy and physiology will really be useful to him in after-life and are not merely subjects for examination which can be conveniently forgotten as soon as may be after the examination has been passed The method of illustrating anatomy and physiology by demonstrating patients in the pre clinical period and by classes in applied anatomy and physiology during the clinical years is a step in the right direction A case of hemiplegia or of tabes can be made to illustrate vividly the tracts in the cord to a Second M B candidate, while at the bedside every effort should be made to induce the student to build up his interpretation from physiological principles, thereby encouraging him to develop his own powers of judgment I have been struck by the unwillingness even of students who have done brilliantly in physiology to attempt this I have repeatedly had to remind them that there is a lot of common sense deduction in medicine—it is not an esoteric mystery We must do our best to encourage the formation of a balanced judgment ready to accept new truth after critical investigation and able to detect specious fallacies

Systematic lectures in medicine and surgery could be reduced, if not entirely abandoned, in favour of further clinical lectures and demonstrations, which are more stimulating at the time and make the subsequent reading of textbooks more interesting Formal lectures are a survival of the time when textbooks were few and inadequate Surgery is outside my province, but I feel that too much time is spent by students trying to get an unsatisfactory view of operations which they will never be called upon to perform

Observation in the Wards

It is often alleged that the student of to day relies too much on what he is told, rather than on what he can observe for himself For this no doubt the examination system is somewhat to blame Nothing can take the place of living in the wards as much as possible and observing closely the progress of actual cases

It is a special advantage of our English plan of clinical clerkships that the student is taught to regard a certain number of the ward inmates as *his* patients—he is *their* doctor, the personal individual relation is encouraged from the very beginning, and it is the best introduction to general practice I used to make a point of urging upon all my students the prime importance of taking a full history I told them, what is the literal fact, that as I have gone on I have found myself taking more and more time over the history compared with the time occupied by the physical examination I would point out that the history tells them so much about the patient, his general outlook and temperament, and prepares them for the kind of examination specially called for I would go on to say something of this sort At the outset remember the enormous difference in the effect on the patient that can be produced by your attitude towards him Some patients are uncommunicative, others loquacious, but it is fairly certain that they are in a state of fear—whether obvious or concealed This may make them exaggerate or it may make them minimize their symptoms, because in the former case they are afraid that if they don't emphasize their sufferings you will overlook some thing, in the latter the fear that you will confirm their own fears if they let you know how much they are suffering But both alike are in a suggestible state and they are watching you closely, and are much readier to accept an unfavourable than a favourable suggestion, even though they react by a tendency to contradict you Keep a straight face when the patient tells you his interpretation of his symptoms, however preposterous it may be Another difficulty may be that the patient will persist in attaching a label invented by himself or obtained from his relatives or possibly from another doctor After explaining how to get down to the facts as accurately as possible, I would go on to show how the patient's statements, though demonstrably false, told them a lot about him—his fears and his reactions to them They

might even find that his disease *was* fear and they could proceed to investigate the origin of that fear

After the formal round I tried to have a private talk with the patient and also if possible with a relative. Such relevant particulars as I could glean I would tell the students on the next round but away from the patient's bed.

The Psychological Aspects of Disease

With regard to the more specific teaching of the psychological aspects of disease I may summarize the views of one of our conferences of which I was a member. It is highly important that the student should be made familiar with the psychological aspects of patients in hospital whether they are under treatment for organic disease or for functional nervous disorders or are admitted merely for the purpose of observation and investigation. With this object a series of demonstrations should be held at least once a fortnight throughout the student's period of in patient clerking and in patient dressing. It is recognized that in every ward there are many patients suitable for investigations and demonstrations of this kind but that a considerable amount of time is required in some instances for their preliminary study by a psychotherapist before they can be used for the purposes of teaching. In some medical schools such demonstrations are in force and have met with great success and we suggested that the physician or surgeon in charge of the ward may undertake them himself or may hand over that duty to a colleague who is attached to the hospital for the purpose of teaching medical psychology.

The medical officer in charge could hardly dissent if he was given the option of taking on this work himself if he had any desire to do so. If he had not he could scarcely object if someone else did it and this could hardly be regarded as an intrusion. It would be well for the physician and the medical psychologist to meet in consultation in the ward at any rate in the first instance. I am sure this arrangement would be mutually helpful.

We thought at the conference that in some such way the teacher of medical psychology would be able to draw upon the material in the hospital as a whole for teaching purposes and by selecting patients whose condition is not primarily one of mental disorder the psychological features of any sick man woman or child could be brought to the notice of the medical student in proper perspective. We also recommended that in the final qualifying examination adequate knowledge of the psychological aspects of ill health should be expected from the candidates and should be tested not only in the written papers but in the clinical and oral parts of the examination. Some such arrangement is bound to be made eventually. my own experience as a teacher has shown me this. the pressure to teach the neuroses is coming from below—the students are eager for it clamouring for it and if they don't get it from one man *or in one school they will go elsewhere. In the future* no school will be able to maintain its prestige for long if it persists in neglecting its opportunities in this direction. I believe that in this way a man going into practice would not have the humiliating experience of finding himself confronted with conditions that he had never met with in his textbooks. Having allowed for or excluded organic factors he would know how to look round for the psychical causes at work.

Above all we must not overwhelm the student with a mass of facts at the expense of developing his powers of observation and deduction. With those powers at his disposal he will be able to go on educating himself. Some of my suggestions as to the methods by which these desirable ends may be attained may not meet with general approval. I can only claim for them that they are based on an experience of more than forty years of teaching various subjects in the curriculum ranging from biology to clinical medicine.

The Examinations

The *Examination of Examinations* published by Sir Philip Hartog and Dr E. C. Rhodes in 1935 was a shock to our confidence in the system. We had already travelled far from the point of view which underlay the original attitude of London University indeed it seems incredible to-day that a mere examining body should ever have been regarded as a university. The enormous building now rapidly rising in Bloomsbury shows how far London University itself has left such an attitude behind. But it was disturbing to find how widely different were the marks allotted by different examiners to the same papers and even by the same examiner re-reading the same papers after an interval. To take a chance example the papers of three candidates were marked by seven examiners the marks of the first varied from nineteen to fifty-eight out of 100 of the second from thirty-seven to seventy-one of the third from thirty-eight to seventy. A different fate was allotted to half the candidates by one examiner on a second reading! When one considers what depends on the result of examinations such discrepancies are indeed perturbing. Yet the authors of this inquiry have no alternative to offer.

These instances are not quoted from medical examinations but if we believe ourselves entirely free from such errors we deceive ourselves. The rules of the General Medical Council do what is possible to reduce such errors to a minimum. No candidate can be rejected on the verdict of one examiner alone. Two examiners must be present throughout the clinical and oral examination of every candidate. Where there are a considerable number of examiners it is well for the candidate to have his work surveyed by different pairs. Thus at Cambridge the first paper is looked over by one pair the second by another the clinical examination is conducted by a third and the oral examination by a fourth. In this way every candidate is reviewed by eight individuals and as every doubtful case is discussed at the examiners' meeting it is not likely that substantial injustice will result. If arrangements permit of more than one pair of examiners participating in the clinical examination of each candidate so much the better.

The plan instituted in the National University of Ireland by Professor Henry Moore at Dublin is the best I have met with. It necessitates three pairs of examiners. The candidates have an hour to examine and write up their first case they are then put on to a second case which they go over in the presence of two examiners pass on to a spot case with two more and are finally cross-questioned on their first by the examiners who have had an opportunity of reading the scripts. The examiners deal with the same cases it is the candidates who change over. As I cordially agree with the G.M.C. rule that no candidate should pass who fails to obtain half marks in the clinical examination it is a wise precaution that such a decision should depend on the judgment of more than one pair of examiners. It is usual to allot only 15 per cent. of the total marks to each of the two papers 20 per cent. to the oral and 50 per cent. to the clinical. It may be thought inequitable to allot a smaller proportion of marks to three hours written paper than to an oral

examination not lasting more than a quarter of an hour, yet most examiners of experience are confident that they can judge a candidate's capacity better by oral than by written examination This is true if the candidate remains in a normal state of mind, unfortunately some of them seem to become disorientated and aphasic under the ordeal I remember an able man who had been a combatant major in the war breaking down completely, he told me that he would rather go over the top any time than face an oral! Every effort should be made not to keep candidates locked up and waiting for a long time, for fear is infectious under such conditions, a fact I bear in mind when I come to the later members of a batch I realize that it is the irresistible tendency of outgoing candidates to communicate 'tips' to the incoming ones which necessitates this rather barbarous practice, but it should be possible to call up small batches for certain hours, and to change the questions for each new batch If this became recognized as the usual practice the hunting for tips might cease to be so keen I think it is better for the papers marks not to be known at the time of the clinicals it is apt to prejudice the examiner for or against a candidate On the other hand, it is well for the examiner at the final oral to know all the candidates marks and to adjust his test accordingly

It is clear that, on the usual scale, high marking for the clinical may entirely compensate for weak papers, and a man who has been unable to show adequate knowledge during six hours' writing may, through luck in the cases he is given, reach a pass mark on the total More insistence on a pass mark for the papers is needed, in my opinion, in some places, though I agree that at least half the total marks should be allotted to the clinicals if we are to let loose on the public men with practical rather than merely theoretical knowledge

The Candidates

I have thought it worth while to discuss rather fully the conduct of the final examination, since the whole system of testing knowledge thereby has recently come rather under a cloud of suspicion I hope I have shown that care is taken to diminish the element of chance as much as possible, and I should next like to offer some advice to prospective candidates I would, in the first place, remind them that their examiners have all been candidates themselves and know both the difficulties experienced and the devices adopted—particularly the latter I would say, do not imagine we are out to trap you, we want to see what you know, not what you don't know Map out your time for the different questions in the papers It is not easy to gain many extra marks by a specially long answer, while to omit a whole question for lack of time seriously reduces your total It is quite easy, on the other hand, to get 25 to 30 per cent of the marks by giving a synopsis of an answer if you have not allowed yourself time to answer it fully Don't try to impress us with your learning by giving rare causes first, it only proves you lack a sense of proportion If at the oral you do not know the answer to a question, say so—do not waste time which should be devoted to gaining more marks by glaring helplessly at the examiner If at the clinical you are asked the position of the apex beat of the heart, say it is in the 4th space 3 inches from the middle line, and not "I thought that perhaps it might be a little out," and then with a hurried attempt to read the examiner's expression, add 'but I wasn't quite sure" an exasperating trick, and a very common one Do feel the pulse and be able to say something about the condition of the radial artery One might think the modern student never feels the pulse, but merely demands to see the electrocardiogram! Remember that you will get more credit for routine examination of the patient and good observation than for a lucky shot at the diagnosis Two candidates I recently asked the relevant question, "Is the patient a married woman?" replied that they had not asked her, yet her wedding ring was freely displayed! Remember also that 'tips' are dangerous and often misleading At one examination we showed a juvenile hemiplegia in the morning, in the afternoon it happened that a boy of about the same age suffering from Friedreich's ataxia was occupying the same place Candidates went on diagnosing hemiplegia in a patient whose lesion was obviously bilateral Comment is unnecessary Put clinical points first If asked what is the first thing you would do when called in to see a case of jaundice, do not reply, "I would do a van den Bergh," or that the first thing you would do for haematemesis is a test meal or a barium meal You know you would do nothing of the sort, at least I hope so I am quoting from my actual experience I must admit that the attitude of clinical teachers may do something to contribute to developing this absurd state of mind The student is influenced more by what he sees his teacher do than by what is said, and he is quick to notice that the newer methods interest the teacher most

In conclusion, let me welcome new recruits for the study of the most fascinating, if one of the most exasperating, professions Its combination of scientific and human interest will provide the satisfying feeling that a life spent in its pursuit has not been lived in vain

THE PROFESSION OF MEDICINE

In accordance with long-standing custom we preface the main contents of the annual Educational Number of the *British Medical Journal* with some remarks by way of guidance to those who contemplate entering the profession of medicine

REVISION OF CURRICULUM

A revision of the medical curriculum has been under consideration for the last few years and a good deal of The discussion is still continuing, based mainly upon four important reports the final report of the American Commission on Medical Education, the report of the British Medical Association's clinical committee, a Bulletin on "Medical Education and the Reform of Medical Studies" issued under the auspices of the Health Organization of the League of Nations, and the report of a Conference of Representatives of the Universities of Oxford, Cambridge, and London, the Royal College of Physicians of London, the Royal College of Surgeons of England, and the Society of Apothecaries of London These reports are essentially at one as to the main points of reform So far as relates to the British position, there has been common agreement that it is undesirable to lengthen the five years medical course, but it is recognized that this course should be regarded as beginning at the time when the study of human anatomy and physiology is entered upon, and that this should be

at approximately the age of 15 years—rather later than is permitted under the present regulations It is held further that a higher standard of general education than the present minimum should be demanded of those entering upon this course that the requirements as to knowledge of the basic sciences of physics chemistry and biology should be modified and extended that instruction in psychology genetics and methods of clinical examination should be introduced into the first two years of the curriculum that the course should be regarded as a whole, with greater co operation among the teachers of the several subjects and not split into segregated departments and that throughout the preventive and psychological aspects of medicine the living human personality in health, the sociological duties required from doctors should receive more attention than has hitherto been common Two years ago the General Medical Council passed new resolutions and recommendations based upon these principles These are to come into force on November 1 next Though the new pre registration requirements do not actually apply to students entering on their studies in October next such students should familiarize themselves with the changes which become operative before their period of study is completed Moreover parents and students in future years should have in mind that the pre registration requirements bear upon the course of study in school between the ages of 16 and 18 years It must be remembered that the powers of the General Medical Council are limited and that quite as much depends upon the action of licensing bodies and medical school authorities as upon the Council Indeed it may be said that whatever regulations and minimum requirements are laid down and however admirable are the arrangements set out in the prospectus of a university or teaching body success depends upon the ability and inspiration of the teacher and an adequate response on the part of the student

Of the eleven chapters of a large work *American Medicine*[1] published in New York last year the third chapter on medical education covers 230 pages and brings out the continuous relation between the teaching of the medical student and every other aspect of medicine dealt with in the report It is clear from this chapter that the problems now facing the medical schools of the British Isles have close counterparts in America

FINGER-POSTS

The first object of the Educational Number is to inform prospective students and their parents of the steps that must be taken in order to become a registered medical practitioner The second is to help those wishing to know what a medical career has to offer, and others who having already decided to study medicine are uncertain about the line of work for which they are best suited This introductory article gives an opportunity of touching upon some aspects of medical study and practice and of directing attention to a few points that might not occur to anyone without experience of the medical life If many sentences have a familiar ring to the medical reader it must be remembered that they are addressed each year to a new audience of the rising generation

The classified sections that follow this general article give an account of the course of training required of students at the present time the places where it can be obtained and the bodies which test the knowledge gained and confer degrees or diplomas entitling successful candidates to become legally qualified medical practitioners Sections are included also on postgraduate study on the higher qualifications, and on most of the varied spheres of work private or official which are open to registered medical men and women at home and abroad The details given are founded on official information and arranged along the customary lines

PORTALS OF THE PROFESSION

The *Medical Register* is the official statutory list of legally qualified medical practitioners kept by the General Medical Council There are many ways in which admission can be obtained to the *Register* No fewer than twenty seven bodies—eighteen universities and nine corporations—either separately or jointly issue registrable qualifications and the number of teaching institutions is even larger Nevertheless the medical courses of the various universities and schools in Great Britain and Ireland run on parallel lines and the obligatory curriculum is much the same for all students But the individual teaching and examining bodies have different standards and requirements and bestow different qualifications and the choice should therefore be made early so that a definite plan may be followed The possession of a university degree is generally regarded as an advantage in practice yet a considerable proportion of medical men in this country find themselves debarred from obtaining it because the Conjoint Examining Boards formed by the union of medical corporations have no power to grant degrees The decision to study for a university degree in medicine should if possible be made by the time a boy or girl is 15 A matriculation examination or its equivalent should be attempted without delay and the parent should ensure that the special requirements of the medical faculty of the selected university are fulfilled

The conditions with which those who wish to enter the profession must comply are regulated by the General Medical Council which is a statutory body set up under the Medical Acts a summary of its functions and requirements is given at page 489 That section should be read with care because of the important changes which are about to come into operation regarding the admission of medical students to schools of medicine

Every student after passing examinations in the subjects of general education and in the preliminary sciences of chemistry and physics must take a course of training at a recognized medical school covering a period of at least five years but usually extended to six years or more Examination of candidates as to their fitness to practise medicine surgery and obstetrics is left to the licensing bodies, which are of two kinds—the universities and certain medical corporations in England Scotland and Ireland The requirements of these licensing bodies are summarized elsewhere under separate headings One of the functions of the General Medical Council besides that of keeping the *Medical Register* and maintaining discipline within the profession is to make sure that the tests at each stage do not fall below a certain standard and that the students examined have undergone prescribed courses at approved institutions Successful candidates eventually receive either degrees in the case of a university or diplomas or licences in the case of a corporation these qualifications entitle them to claim insertion of their names on the *Medical Register* Every student as soon as he obtains his qualification to practise should at once register otherwise he cannot hold a public medical

appointment, or sign any certificate required from a legally qualified practitioner (such as a death certificate), or recover professional fees in a court of law

COST OF MEDICAL EDUCATION

This resolves itself into the cost of training at medical school and hospital, and the cost of living during the five or six years of undergraduate study Besides differences in the charges made for instruction there are differences in examination fees, as well as in the fees for certificates of qualification, and those who seek the higher degrees and diplomas must expect to pay more for the additional courses and tests and certificates School and examination fees together with the cost of board, lodging, clothes, travelling, and recreation, form the largest items, and to these must be added the money spent on books, microscope, instruments, and so forth

Since professional education must continue for five years at least (a period exceeded by the vast majority), and since the cost of living varies much in different parts of the country, while personal expenditure varies still more, it can only be said in a general way that anyone who thinks of entering the profession should be prepared for an outlay of at least £1,500 Something between two thirds and three quarters of the whole amount would probably be spent on maintenance and the rest in fees for tuition, examinations, and admission to degrees or diplomas For those who have to live in rooms away from relatives £120 per annum for board and lodging, etc, is probably a minimum figure The fees charged by the different schools and licensing bodies are stated in the paragraphs relating to each on other pages of this issue When making an estimate of the probable outlay, the many helps available nowadays for the reduction of expense should not be ignored At nearly all the medical schools more scholarships and money prizes are offered now than in the past, at the Scottish universities bursaries are numerous, and the Carnegie Trust (whose regulations are summarized at page 502) gives pecuniary help to many Scottish students The main thing to bear in mind when considering costs is that, as compared with other professions, the period of training in medicine is long, and for most students expensive Further guidance on this matter will be found in a memorandum[1] issued by the General Medical Council This pamphlet gives much useful information, including a comparative table of the cost of study and examination at the various institutions

NUMBERS OF STUDENTS AND DOCTORS

The following brief survey should be read with the notes and tables printed at page 488 on the numbers of registered students and practitioners More new students mean more new doctors five or six years later, though there is a fairly constant wastage

At the close of the last century the annual number of men and women who registered as medical students in the United Kingdom had been on the average about 800 and then for the next thirteen years it stood at about 1 400 During the war period, though many male students left to serve with the Forces, the entries grew steadily larger, so that in 1918 they were 2,253, and in the following year, when demobilization was in active progress, they reached 3,420 In the next five years the numbers rapidly fell, but from 1923 to 1928 they remained at a fairly steady level rather below the immediate pre-war average In 1929 the entries rose again to 1,502, and in 1930 to 1 792 In the seven following years they were 1,643, 1,947, 2,287, 2,350, 2,603, 2,544, and 2,297

In the past seventeen years the numbers of new practitioners registering each year have greatly exceeded the usual pre-war figure of eleven hundred or so The large additions to the profession in recent times brought the total number of names on the *Medical Register* up to 60 163 at the end of 1937 This is about 6,400 more than the figure for 1927, 16,350 more than that for 1917, and 20 350 more than that for 1907 The population of the British Isles has not increased at anything like that rate during the same decennial periods, and the ratio of doctors to inhabitants is therefore much higher now than formerly Some think that the saturation point has been reached, that there is real risk of an overstocked profession and "an unemployed medical proletariat" On the other hand, the Regius Professor of Medicine at Oxford has publicly given his opinion that the profession is far from being overcrowded I am in the habit of preaching that we could do with twice as many doctors as we have, but that is only if the work of the doctors in the future is going to be somewhat different from what it has been in the past The work of doctors in the future will be that of preserving health and preventing disease The trend of events is in that direction For the time being it is safe to say that there are quite enough doctors to satisfy present demands Of the total number of registered practitioners to-day some 10 per cent are women, and, according to returns published by the University Grants Committee, women constituted 16 1 per cent of the total full-time students of medicine and dentistry in England, Scotland, and Wales in the academic year 1936–7

CHOICE OF CAREER

The months immediately after registration may be put to the greatest advantage by serving as house physician, house surgeon, or casualty officer in a hospital, by working as assistant or locumtenent in private practice, or by seeing something of the world as a ship surgeon As a preliminary to practice of whatever kind, a year spent in junior appointments at a teaching hospital—"clinical experience under supervision"—is a most profitable investment

Despite the apparent wealth of choice, the average newly qualified practitioner has to choose between private practice and an official or institutional career Among the paths open are general medical practice, which absorbs three-quarters of all who qualify, Government service at home or abroad, including the medical branches of the Armed Forces, public health appointments and other administrative or official posts, institutional work, such as that of the municipal hospital (a rapidly widening field nowadays), the mental hospital, the fever hospital, and the sanatorium, academic positions in schools of medicine, general consulting practice as physician, surgeon, or obstetrician, and special work in scientific research or in one of the many subdivisions of clinical medicine and surgery Most of these careers are discussed in some detail in later sections, but a few words may be said here about general practice and the work of a consultant or specialist

Further information about such matters will be found in *The Medical Practitioners Handbook*, published by the

[1] *Memorandum on the Procedure to be Adopted by those who desire to enter the Profession of Medicine with Notes on Costs and Prospects* General Medical Council, 44, Hallam Street, Portland Place W 1 Price 1s post free

British Medical Association[1] This comprises articles on openings for members of the profession on practical aspects of medical work on registration and the privileges of practitioners on practice under the Insurance Acts on specialization and special diplomas and on medical defence societies

GENERAL PRACTICE

General practice whether in town or country is entered in one of three ways The newcomer may take a house put up a plate and wait for work to come to him he may buy the goodwill of a practice rendered vacant by retirement or death or he may become a partner in an established firm The first is more risky than the second and the second than the third A well managed partnership of three or more has this advantage over single handed practice that it allows each partner leisure for recreation and for keeping up with the progress of medicine Success in private practice demands a great deal of knowledge beyond that gained at the medical schools and hence a man is more likely to be accepted as a partner or to do well on his own account if he has already some experience as an assistant or deputy Hints on how to begin general practice and some of its pitfalls are given in a little book first published six years ago Another book recently issued *An Introduction to General Practice* will be of great value to senior students and the newly qualified

Since three quarters of those who pass out of the medical schools become family doctors sooner or later it seems clear that the main purpose of the curriculum ought to be the training of the student for general practice In its Proposals for a General Medical Service for the Nation lately revised[1] the British Medical Association states as an axiom that the medical service of the community must be based on the provision for every individual of a general practitioner or family doctor and the whole series of proposals rests on this as a fundamental principle In regard to the prevention of disease on which the Association lays great stress in its memorandum, the general practitioner has an increasingly important part to play

The national system of compulsory health insurance now more than twenty five years old has had a profound influence on general medical practice in this country On the whole the insurance system has proved of substantial benefit to medicine By raising the standard of living among doctors it has induced a better class of man to enter the profession and the service has steadily improved in efficiency The Insurance Acts provide domiciliary medical attendance for some nineteen million persons and more than 19 000 doctors undertake the medical care of this vast section of the community Thus the bulk of the general practitioners of Great Britain now give in large or small measure attendance and treatment under a system embracing almost the whole working population These practitioners by placing their names on the panel (or medical list), signify their assent to the terms of service set out in the Medical Benefit Regulations and other relevant provisions Their interests are watched over by the Insurance Acts Committee of the British Medical Association which is the executive body of the Annual Conference of Representatives of Local Medical and Panel Committees

An Introduction to General Practice By Sir Kaye Le Fleming E Arnold and Co (5s)
The revised memorandum is issued as a pamphlet by the British Medical Association and copies can be obtained from the Secretary

CONSULTING PRACTICE HIGHER DIPLOMAS

The term consulting practice comprises in ordinary usage the work of the general physician that of the general surgical consultant or operating surgeon and that of the gynaecologist and obstetrician These are the three large divisions of consulting practice as distinct from general practice which though they imply some restriction yet call for a wide range of activity and outlook in contrast with the smaller ambit of a specialty in the narrow sense Of these main divisions the third is obviously the most limited but on several grounds it can claim to rank as something more comprehensive than the other specialties No sharp line can however be drawn between consulting practice and specialist practice Most general consultants whether medical or surgical are specialists in some branch of their practice and most specialists are consultants in the sense that their work largely comes to them through the recommendation of general practitioners with whom they act (or should act) in a consultative capacity

Success as a consulting physician or surgeon or specialist is hard to achieve except by the aid of appointments to hospitals particularly those with medical schools These posts are much sought after and the time of waiting for a vacancy may be long It follows then that the would be consultant since he can scarcely hope at first to keep himself on his professional earnings must either have private means or be prepared by teaching or in other ways to make ends meet Competition in this branch of practice is very keen Expenses are heavy and the young consultant or specialist may have to go through a long period of training and waiting before he makes an income but on the other hand success when it comes is liberally rewarded In the larger industrial towns of the North of England there are many general practitioner specialists who combine ordinary panel practice with much surgical or other special work in well equipped local hospitals which admit patients in different categories according to their means Though the fees are small compared with those earned by operating surgeons and specialists in London the work is by no means unremunerative

Additional degrees and diplomas are important factors in securing election to the visiting staff of a large hospital and a few remarks about them may be made here Beyond the qualifications which admit to the *Medical Register* most of the licensing bodies bestow higher titles after further tests A considerable number of those who have graduated M B at a university including many general practitioners proceed later to the M D When applying for the post of physician to a hospital it is always useful and may be obligatory to hold also the Membership of one of the three Royal Colleges of Physicians according to the part of the British Isles in which the hospital is situated So too the Fellowship of one of the three Royal Colleges of Surgeons should be obtained by those seeking surgical appointments and the degree of Master of Surgery is an added distinction There are also diplomas in a growing number of special branches of work—such as public health tropical medicine, ophthalmology laryngology radiology tuberculosis psychological medicine midwifery and anaesthesia—which are superfluous for most practitioners but may be useful or even indispensable for those who intend to devote themselves to one or other of these subjects

PROFESSIONAL ORGANIZATION

In no profession is a readiness to join hands for the common good more necessary than in medicine. Individuals and isolated groups are always at a disadvantage when they try to defend their interests against organized bodies, whether these are Government departments, local authorities, or commercial companies. In his daily work the competent doctor is well able to deal with the individual patient and the patient's friends, but he cannot stand up single-handed to outside organizations. Medical men and women must therefore bind themselves together, and the first step after qualification should be to become a member of the British Medical Association. Besides having behind him the machinery and the influence of a world-wide professional body, a young practitioner will find in the meetings of his local Division, and in the Annual Meetings of the Association, many opportunities for keeping abreast of new work and for friendly intercourse with colleagues. Another thing that no new graduate should fail to do is to join one of the societies which for a small yearly sum undertake individual legal defence of their members. The need for protection may arise out of the first case attended in hospital or in private practice.

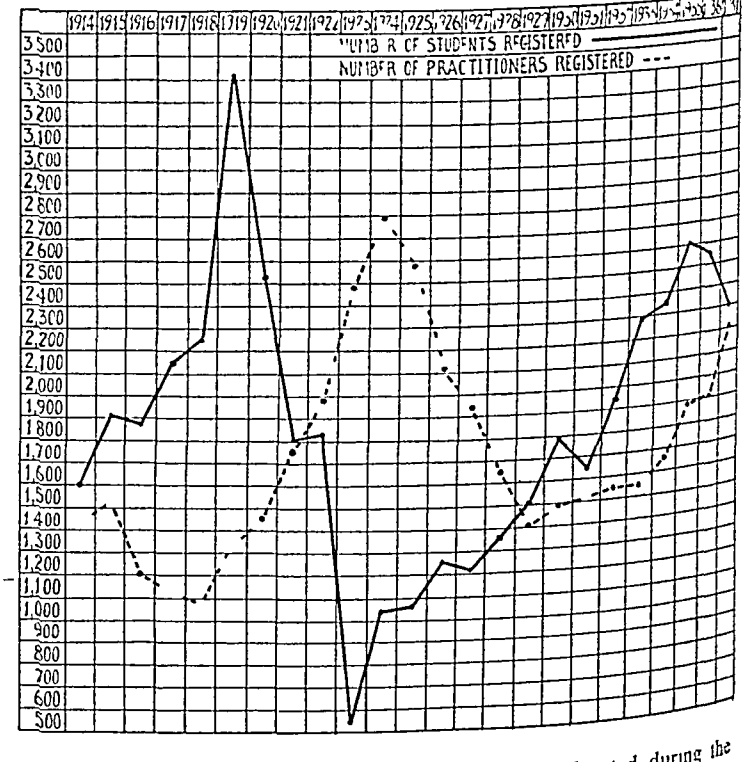
The British Medical Association was founded in 1832 to advance the medical sciences and maintain the honour and interests of the profession; a note on its constitution and activities will be found at page 554. This great Association, with Branches throughout the British Empire and a membership of 37,000, acts for the profession as a whole and speaks in its name. The record of over a hundred years' work shows that vocational organization, wisely directed, can combine service for its members with service for the public. Every medical man and woman should try to take a share in some of the movements, scientific or social or political, with which the B.M.A. has identified itself. The Association alone provides the machinery whereby any doctor can exert influence in promoting the welfare of the profession by helping to solve the problems that face it.

NUMBERS OF THE PROFESSION

A Review of Fifty Years

In order to present a general view of the numerical strength of the medical profession during the past half-century we have extracted from the records and set down below in parallel columns the total number of names in the *Medical Register* on December 31 of each year, and the numbers added annually by registration between 1888 and 1937.

Numerical State of the Medical Register



Year	Names added in Year	Total No on Dec 31	Year	Names added in Year	Total No on Dec 31
1888	1 184	27 939	1913	1 168	41 940
1889	1 305	28 348	1914	1 433	42 378
1890	1 266	29 163	1915	1 526	43 225
1891	1 345	29 555	1916	1 202	43 481
1892	1 513	30 590	1917	1 134	43 819
1893	1 579	31 644	1918	1 077	43 926
1894	1 426	32 637	1919	1 322	44 510
1895	1 446	33 691	1920	1 457	44 761
1896	1 385	34 478	1921	1 760	45 408
1897	1 230	34 642	1922	1 983	46 476
1898	1 210	35 057	1923	2 482	48 140
1899	1 351	35 836	1924	2 796	50 035
1900	1 345	36 355	1925	2 570	51 738
1901	1 318	36 912	1926	2 120	52 614
1902	1 275	37 232	1927	1 941	53 769
1903	1 233	37 878	1928	1 656	54 336
1904	1 168	38 492	1929	1 410	54 870
1905	1 240	39 060	1930	1 490	55 291
1906	1 197	39 529	1931	1 522	55 604
1907	1 221	39 827	1932	1 546	56 097
1908	1 137	40 257	1933	1 542	56 741
1909	1 143	39 818	1934	1 664	57 496
1910	1 062	40 483	1935	1 882	58 361
1911	1 042	40 913	1936	1 905	59 010
1912	1 157	41 439	1937	2 214	60 163

Proportion of Practitioners to Population

Year	Registered Practitioners	Population British Isles
1881	23 275	35 241 482
1891	29 555	38 104 975
1901	36 912	41 976 897
1911	40 913	45 370 530
1921	45 408	47 146,506
1931	55 604	48 959 485

These figures show a steady increase in the ratio of doctors to population, which was accelerated during the years immediately following the war. Making allowance for the large number of registered practitioners living abroad and for those no longer in practice, the proportion of doctors to population is a good deal more than one to every thousand.

Numbers of Medical Students and Practitioners Registering 1914 to 1937

The varying proportion of registered medical practitioners to population during the period under review is shown in the following table. This sets out the total population of the British Isles at each decennial census since 1881, and the number of names on the *Register* in the same year.

Registration of Students and Practitioners

The relation between the numbers of new students and those of newly qualified practitioners during recent years is shown in the chart on the preceding page compiled from returns published by the General Medical Council

Some further remarks on the numbers of medical students in recent years will be found in our introductory article on the profession of medicine

The chart shows that the number of practitioners registering in any one year corresponds more or less closely to the number of students registered five years previously the difference being accounted for by examinations and other obstacles For the last ten years there has been a fairly steady annual increase in the numbers of both students and practitioners becoming registered

The General Medical Council

The General Medical Council was established by the Medical Act 1858 in order that persons requiring medical aid should be enabled to distinguish qualified from unqualified practitioners Eighteen members of the Council are appointed by the Universities in the United Kingdom having medical faculties nine by the medical Corporations such as the Royal Colleges of Physicians and Surgeons five by His Majesty in Council and seven members are directly elected by members of the profession as a whole—a total of thirty nine To these are added three dentists who are members of the Dental Board and are appointed for dental business Although the eighteen members appointed by the universities and the five members appointed by His Majesty in Council may all be laymen only two laymen have so far been appointed the first of these was appointed by the Privy Council in 1926 and on his resignation in 1931 another was appointed in his place Both were members of His Majesty's Privy Council

The Council's offices are at 44 Hallam Street Portland Place London W 1 The offices of the Scottish and Irish Branch Councils are at 44 Queen Street Edinburgh 2 and 35 Dawson Street Dublin

The Council exists for the protection of the public and not of the profession Its principal functions are three First to keep the *Medical Register* secondly to see that the name of no person is entered thereon as qualified unless he has had an adequate professional education and to remove therefrom the names of qualified persons who are no longer entitled to public confidence and thirdly to provide for the publication of the *British Pharmacopoeia* It is the entry and retention of a name on the *Medical Register* and not the possession of a degree or diploma that constitutes a person a duly qualified or legally qualified practitioner of medicine

The Council has no power to make rules in regard to the medical curriculum or examinations but it can pass resolutions and make recommendations relating thereto and if any of these were ignored by the Licensing Bodies it would be open to the Council to make representations to the Privy Council which if it thought fit might order that the qualifications obtained from any such body should not be registrable

The name of any medical practitioner who has been convicted of a criminal offence or who is judged after due inquiry before the Council itself to have been guilty of infamous conduct in any professional respect may be erased from the *Medical Register*

The Medical Act prohibits attempts being made to impose restrictions as to any theory of medicine or surgery and once a practitioner has been trained and tested in the knowledge essential for public safety he may adopt any theory of medicine or surgery in which he honestly believes The Medical Acts do not prohibit the practice of medicine by unregistered persons but if they wilfully and falsely assume any title implying registration they are liable to prosecution In this respect the Medical Acts differ from the Midwives and the Dentists Acts, which entirely preclude the practice of midwifery or dentistry by unregistered persons Unregistered medical practitioners however are under certain disabilities for they cannot recover charges for medical or surgical attendance etc in a court of law they cannot hold an appointment as medical officer of health in public (including mental) hospitals or as a medical officer in the Military or Naval Services or in ships they cannot give any valid certificate which is required by any Act from a medical practitioner—for example a certificate of death and they cannot engage in insurance practice obtain dangerous drugs or attend cases of venereal disease

An account of the recommendations which the Council has drawn up in respect of the education of medical students here follows

Admission of Medical Students to Schools of Medicine

Any application to be registered on or after September 1 1938 as a medical student should be addressed to the dean or other appropriate authority of the school of medicine to which the applicant desires to be admitted Students will no longer as heretofore be registered by the General Medical Council on their admission to schools and it will rest with the authorities of schools and of licensing bodies to deal at their discretion without further reference to the Council with applications for registration

From November 1 1938—that is after the beginning of the first term of the academical year 1938–9—applications will be considered by authorities of schools and of licensing bodies in the light of the Resolutions of the Council in regard to Professional Education which come into operation on November 1 1938 and of the Recommendations of the Council in regard to the Registration of Medical Students incorporating Resolutions in regard to general education and preliminary scientific subjects which come into operation on the same date

The relevant provisions of the Recommendations which will supersede the Regulations of the Council in regard to the Registration of Medical Students (last revised in June 1934) are as follows

The Council recommend that subject to such exceptions as may from time to time be allowed by the authorities of Schools of Medicine and of Licensing Bodies every medical student before the commencement of the medical curriculum proper should be registered under the following conditions

1 Before registration as a medical student every applicant should furnish evidence that he has attained or will within three months attain the age of 18 years

2 Before registration as a medical student every applicant should be required to have passed (i) a recognized preliminary examination in general education (ii) an additional examination or additional examinations conducted or recognized by one of the licensing bodies

PRELIMINARY EXAMINATION IN GENERAL EDUCATION

3 The minimum standard of the preliminary examination in general education required of applicants should be that of a university matriculation or entrance examination in the faculties of arts or pure science If in other faculties the examination should be of the same standard and should include the subjects specified in section (1) of the following recommendation

4 (1) The Council have recognized as complying with the Recommendations the following University Examinations which admit to the Faculties of Arts or Pure Science or *subject to the condition specified below* to other Faculties the Matriculation Examinations of the Queen's University of Belfast the Universities of Dublin London Wales and the National University of Ireland the Previous Examination of the University of Cambridge Responsions at the University

of Oxford, and the Entrance or Preliminary Examination of the Scottish Universities

The condition specified in respect of faculties other than arts or pure science is that The certificate shall bear evidence that the candidate has passed on the matriculation or entrance standard in the following subjects (*a*) English (*b*) Mathematics Elementary (*c*) a language other than English (*d*) a fourth subject as defined in the regulations of the particular examination to be chosen from the subjoined list history geography botany physical science natural science Latin Greek French German or other language accepted by the university for the purpose of matriculation or entrance

(2) Subject to the condition specified in section (1) of this Recommendation the Council have recognized as complying with the Recommendations those of the examinations conducted by recognized authorities in Great Britain and Northern Ireland or in Eire which are accepted by any one or more of the Universities of Great Britain and Northern Ireland or of Eire under the conditions prescribed by them as to credits or grades as qualifying for entrance or matriculation When a School Certificate is presented the credits in the four required subjects should have been obtained at not more than two sittings

(3) The Council will continue to recognize as complying with the Recommendations certain examinations other than those which are mentioned in section (2) of this Recommendation Recognition will not be extended under this section to any examination unless the Council are satisfied (*a*) that in scope and standard it is equivalent to a recognized matriculation or entrance examination of a University of Great Britain and Northern Ireland or of Eire (*b*) that it fulfils the condition specified in section (1) of this Recommendation and (*c*) that the examination has been completed at not more than two sittings The examinations so recognized are the College of Preceptors (England) senior certificate (with credit) the Educational Institute of Scotland preliminary medical certificate Irish Royal Colleges of Physicians and Surgeons preliminary examination in general education

(4) Subject to the condition specified in section (1) of this Recommendation the Council will recognize as complying with the Recommendations such examinations of universities in British India in British Dominions other than Eire (with respect to which provision is made in the foregoing sections of this Recommendation) in British Colonies and in foreign countries as are accepted by any one or more of the Universities of Great Britain and Northern Ireland, or of Eire as qualifying for entrance or matriculation

ADDITIONAL EXAMINATION OR EXAMINATIONS

5 The subjects and scope of the additional examination or examinations which applicants should be required by the licensing bodies to have passed before registration as medical students are as follows (1) For all applicants, chemistry (theoretical and practical) the elementary principles of general and physical chemistry and of the chemical combination of elements including carbon (2) For all applicants, physics (theoretical and practical) the elementary mechanics of solids and fluids the elements of heat light sound electricity and magnetism (3) For applicants who have received their instruction in chemistry and physics before entering universities university colleges or medical schools one *or* two subjects of general education other than chemistry physics or biology at a standard higher than that of the recognized preliminary examination in general education

The standard of the additional examination in a subject or subjects of general education should be approximately that required in a subsidiary subject offered for the Higher School Certificate at the examinations specified in section (2) of the previous Recommendation

Note—It should be open to applicants to offer themselves for examination in the subject of biology either before or after they are registered as medical students

Professional Education

In the Resolutions in regard to Professional Education which come into operation on November 1, 1938, the General Medical Council recommends that the period of professional study, between the date of registration as a medical student and the date on which the student can present himself for the final examination for any diploma entitling its lawful possessor to registration as a qualified medical practitioner under the Medical Acts, should be a period of certified study during not less than five academic years But to meet the circumstances brought about by the dates at which sessions of the medical schools begin and end, the close of the fifth year may be reckoned as occurring at the expiration of fifty seven months from the date of registration In any case, the period of five years must be one of bona-fide study, and the General Medical Council recommends that in every course, and in the examinations, the following subjects should be included

(1) Elements of general biology including an introduction to embryology This course if the licensing bodies permit, may be taken before registration as a student and the examination may be passed immediately after registration

(2) Human anatomy and human physiology including elements of human embryology histology elements of cytology elements of genetics a subject which may be taken with biology the principles of general physiology, the chemistry and physics of bodily functions studied so far as possible in the human subject and elements of normal psychology

(3) Instruction in the following subjects illustrative of that given in anatomy and physiology and introductory to later studies given as arranged by the teachers of anatomy and physiology and of the clinical subjects throughout the second year The amount of time to be allotted to these subjects should be approximately one third of the total time available in that year

(i) Elements of the methods of clinical examination including physical signs the use of the stethoscope, ophthalmoscope, etc and the examination of the body fluids (with demonstrations on living subjects, normal and abnormal)

(ii) Normal reactions of the body to injury and infection as an introduction to general pathology and bacteriology

(iii) An introduction to pharmacology

(4) Medicine including regular instruction and demonstrations in applied anatomy and physiology instruction in methods of treatment including dietetics, therapeutics and prescribing, physiotherapy and principles of nursing and instruction in disease in infancy and childhood and child welfare acute infectious diseases tuberculosis industrial diseases psychology and mental disorder and deficiency diseases of the skin radiology in its application to medicine and the theory and practice of vaccination as branches of medicine The General Medical Council recommends that instruction in these branches of medicine should be directed to the attainment of sufficient knowledge to ensure familiarity with common conditions their recognition and treatment

(5) Surgery including practical instruction in surgical methods including physiotherapy practical instruction in minor operative surgery on the living, theoretical and practical instruction in the administration of anæsthetics instruction in operative surgery, regular instruction and demonstrations in applied anatomy and physiology, and instruction in disease in infancy and childhood, diseases of the eye and principles of refraction, diseases of the ear nose and throat, radiology in its application to surgery venereal diseases, orthopædics and dental diseases, as branches of surgery The General Medical Council recommends that instruction in these branches of surgery should be directed to the attainment of sufficient knowledge to ensure familiarity with common conditions, their recognition and treatment

(6) Midwifery, infant hygiene, and diseases of women including six months attendance on maternity hospital practice and on in patient and out patient gynæcological practice, during which two thirds of the hours of instruction are given to midwifery, including ante natal care and hygiene of infants Throughout the six months the student should receive practical instruction in the principles of ante natal and post natal care, the management of the puerperium, and the care of the new born infant

(7) Pathology and bacteriology including general and special pathology (functional and structural) and morbid anatomy clinical and chemical pathology general and clinical bacteriology, and immunology and immunization

(8) Pharmacology and materia medica including practical pharmacy

(9) Hygiene and public health

(10) Forensic medicine and its application to practice

(11) Legal and ethical obligations of registered medical practitioners The General Medical Council recommends that instruction should be given during the later stages of clinical

study by a person with practical knowledge of the subject in the obligations of practitioners under the National Health Insurance Acts and other Acts of Parliament and in the principles of medical ethics and that attention should be called to the Notices on these subjects issued by the Council

The first two years must be passed at a university or at a school of medicine recognized by any of the licensing bodies and the remainder must be devoted to clinical work at any public hospital or dispensary at home or abroad which is recognized by a licensing body

The General Medical Council recommends that of the period of certified study during not less than five academic years the first two years should be devoted to the study of the professional scientific subjects with an introduction to clinical methods on the lines indicated in the foregoing summary and the last three years should be devoted to the study of the clinical subjects together with the clinical application of the professional scientific subjects on the lines also indicated in the summary The Council adds that throughout the whole period of study the attention of the student should be directed to the importance of the measures by which normal health may be assessed and maintained and to the principles and practice of the prevention of disease

Special Considerations

The recommendations of the General Medical Council in respect of the education of those who desire to enter the medical profession have now been given in outline but before leaving this part of the subject the steps which the aspirant should take may be rehearsed in their due order

(1) Pass a recognized preliminary examination in general education

(2) Pass an additional examination or additional examinations conducted or recognized by a licensing body which includes the subjects of chemistry and physics and may further include one or two subjects of general education other than chemistry physics or biology

(3) Having attained the age of 18 or being within three months of the attainment of that age obtain admission to a university or to a medical school recognized by one of the licensing bodies and secure registration by the authorities of the School of Medicine to which he is admitted as a student commencing the medical curriculum proper

(4) Study for a minimum of five years certain prescribed subjects

(5) Meanwhile pass sundry intermediate examinations and at the end of the fifth year pass a qualifying examination which will entitle him to receive from a licensing body a qualification enabling him to obtain registration in the *Medical Register* whereby he receives legal authority to practise

The Minimum Period—It must be remembered that the period of five years is a minimum more is often required even by the man of good abilities and reasonable industry and some of the universities prescribe a longer period Besides these qualities a student to obtain a registrable qualification in the minimum period of five years or fifty seven months must have a considerable amount of good luck in other words, he must keep in good health through every term, and never fail at a single examination Thus for instance, before presenting himself for any examination he must be signed up for the subjects covered by that examination this means that his teachers have to certify that he has diligently attended the required number of lectures or classes in the subjects in question If however the student happens to be ill during the term when such lectures or classes are taking place he may miss enough of them to make it impossible for him to be signed up Then again, should he fail to satisfy the examiners at some examination, he cannot present himself for re-examination for at least three months This generally entails further consequences because apart from the student's success at the next stage in his career being imperilled by the need for restudying the subjects in which he has failed the licensing bodies usually insist upon a definite interval elapsing between one examination and the next Further many bodies have refused to recognize lectures and classes which have been attended before the student has passed the requisite examination in earlier subjects and the Council now recommends that the professional examinations in the professional scientific subjects studied in the first two years be passed before the minimum period of three years subsequent study be entered on, in other words no clinical study should count as such until these examinations have been successfully completed Failure at an examination may thus not only mean deferment of the date of examinations but deferment of the beginning of the student's study of certain subjects It is thus exceedingly easy for a student to fail to qualify in five years and as a fact the majority of students take longer

In speaking of the minimum period it is to be remembered also that that time is only sufficient to gain a registrable qualification such as a Bachelorship of Medicine or Surgery or the Diplomas of the Royal Colleges Those who wish to take a higher qualification—for instance, the F R C S Eng—must prolong their work for another year or more So too in some cases must those who desire to convert their Bachelorship into a Doctorate This may entail further formal examination but at some Universities the M D is obtainable on presentation of a thesis when the Bachelor has attained a certain age and has practised for a certain number of years However a student's career proper may be considered perhaps, to have ended when he obtains his first registrable qualification for while preparing himself for any further tests he can and usually does hold some junior appointment which more or less covers his expenses

EXAMINING BODIES IN PRELIMINARY GENERAL EDUCATION

The following is a list of the officers of the examining bodies in preliminary general education with the names of the examinations in parentheses

The Secretary Queen University of Belfast (Matriculation) Assistant Secretary Ministry of Education Belfast (Senior Certificate)
The Registrar The University Bristol (Matriculation School Certificate or Higher School Certificate)
The Registrary University Registry Cambridge (Previous)
The Secretary Cambridge Local Examinations Syndicate Building Cambridge (School or Higher School Certificate)
The Medical Registrar University of Dublin (Trinity College) Dublin (Matriculation)
The Secretary of the School Examinations King College Newcastle-upon-Tyne (Matriculation School or Higher School Certificate of the University of Durham)
The Registrar Irish Joint Board Royal College of Surgeons Dublin (Preliminary Examination)
The Registrar National University of Ireland 49 Merrion Square Dublin (Matriculation)
The Assistant Commissioner of the Department of Education 1 Hume Street Dublin (Leaving Certificate)
The Secretary of the Examination Council The University London W C 1 (Matriculation General or Higher School Certificate)
The Secretary Northern Universities Joint Matriculation Board 313 Oxford Road Manchester (Matriculation School or Higher School Certificate)
The Registrar University Registry Oxford (Responsions)
The Secretary Oxford and Cambridge School Examination Board Schools Examination Office Balliol College Oxford (School or Higher School Certificate)
The Secretary Oxford Local Examinations University Press Oxford (School or Higher School Certificate)
The Secretary College of Preceptors Bloomsbury Square London W C 1 (Senior Certificate at Credit Standard)
The Secretary Educational Institute of Scotland 47 Moray Place Edinburgh (Preliminary Medical Certificate)
The Secretary Scottish Education Department 14 Queen Street Edinburgh (Leaving Certificate)
The Secretary Scottish Universities Entrance Board 81 North Street St Andrews (Scottish Universities Entrance or Preliminary Examination)
The Registrar University of Wales Cathays Park Cardiff (Matriculation)
The Clerk Central Welsh Examination Board Cardiff (School or Higher School Certificate)

LICENSING BODIES

The following is a list of officers of licensing bodies and their addresses

UNIVERSITIES

ABERDEEN The Secretary of the Medical Faculty The University
BELFAST The Secretary Queen's University
BIRMINGHAM The Registrar The University
BRISTOL The Registrar The University
CAMBRIDGE The Registrary University Registry
DUBLIN The Medical Registrar The University Trinity College
The Registrar National University of Ireland 49 Merrion Square Dublin C 17
DURHAM The Dean of Medicine The Medical School Northumberland Road Newcastle upon-Tyne 1

EDINBURGH The Dean of the Faculty of Medicine The University
GLASGOW The Registrar The University W 2
LEEDS The Registrar The University
LIVERPOOL The Registrar The University
LONDON The Academic Registrar The University W C 1
MANCHESTER The Registrar The University
OXFORD The Registrar University Registry
ST ANDREWS The Secretary The University
SHEFFIELD The Registrar The University
WALES The Registrar The University Registry Cathays Park Cardiff

LICENSING CORPORATIONS

ENGLISH CONJOINT BOARD The Secretary 8 Queen Square London W C 1
SCOTTISH CONJOINT BOARD The Secretary 18 Nicolson Street Edinburgh 8
IRISH CONJOINT BOARD The Secretary Royal College of Surgeons in Ireland Dublin
APOTHECARIES SOCIETY OF LONDON The Registrar Blackfriars London E C 4
APOTHECARIES HALL OF IRELAND The Registrar 95 Merrion Square Dublin

SCHOOLS WHERE MEDICAL STUDY MAY BEGIN

The following is a list of officers of Schools of Medicine, elsewhere than in Faculties of Medicine in Universities outside London at which medical study may be commenced, and their addresses

DUBLIN The Secretary School of Medicine Royal College of Surgeons
EDINBURGH The Dean School of Medicine of the Royal Colleges Surgeons Hall
GLASGOW The Dean St Mungo's College
The Dean Anderson's College Medical School
LONDON Guy's Hospital The Dean of the Medical School S E 1
King's College The Dean of the Faculty of Medical Science Strand W C 2
London Hospital The Dean of the Medical College E 1
London (Royal Free Hospital) School of Medicine for Women The Dean 8 Hunter Street W C 1
Middlesex Hospital The Dean of the Medical School W 1
St Bartholomew's Hospital The Dean of the Medical College E C 1
St Mary's Hospital The Dean of the Medical School W 2
St Thomas's Hospital The Dean of the Medical School S E 1
University College The Dean of the Medical School W C 1

Universities in England and Wales

There are eleven universities in England and Wales, and some account of each of them follows They all have now fully developed medical faculties

UNIVERSITY OF OXFORD

Though the Oxford Faculty is the oldest in the kingdom, systematic university teaching for students of medicine only really began in 1883, when Burdon-Sanderson came to Oxford from University College, London, to be the first Waynflete Professor of Physiology From that date onwards there was a steady increase in the provisions for teaching and for the conduct of original investigation, the rate of this increase has in recent years been accelerated—first, by the opening of the Nuffield Institute for Medical Research, and, secondly, by Lord Nuffield's munificent further gift of £2,000,000 to the University for the benefit of the Medical School The first Nuffield Professors and their assistants are already at work, and the facilities for teaching and research, both in the pre-clinical and in the clinical departments of the school, are being considerably strengthened On the other hand it is perhaps necessary to emphasize two points In the first place Oxford does not wish to increase the number of its medical students, but to keep up their standard of quality In the second place it is not the intention of those who are planning the future that the average student should complete his clinical work in Oxford, possibly a few who are engaged in research may be given this opportunity when the Nuffield scheme is fully developed

The courses leading to the medical and surgical degrees of the University (B M, B Ch, D M, M Ch), as also that for the diploma in ophthalmology (D O), are open to both sexes Whereas, however, a student must be a member of the University and have taken the degree of B A before he can take the medical and surgical degrees, these restrictions do not apply to candidates for the diploma in ophthalmology

The number of medical students in residence in Oxford is about 240 and approximately the same number are engaged in clinical work for the Second B M in hospitals away from Oxford

Guidance for Medical Students

At school apart from acquiring knowledge the prospective medical student should train himself to think clearly and to write clearly he is also well advised to learn those languages, in particular German which will be of use to him in his future reading

Before he can become a member of the University, and thereby of the Medical School a student has to be accepted by a college or by one of the non collegiate bodies This normally involves the taking of a college entrance examination, but exemption may be gained on the result of a college scholarship examination or in other ways Correspondence on such matters should be addressed to the Head of the college concerned and not to the Dean of the Medical School

When a student has been accepted by a college he next has to pass or obtain exemption from, the University entrance examination Responsions, Latin is a compulsory subject in this or the exempting examination Entries for Responsions or claims for exemption should be made through the Head of the student's college

After passing Responsions or the equivalent the medical student normally takes the preliminary examinations in physics and chemistry and in biology These he can attempt, if his school authorities are willing before he comes into residence and it is an advantage to him so to do, provided such a course does not interfere with his general education These particular examinations satisfy simultaneously the preliminary requirements both of the University in respect of the B A degree in animal physiology and also of the General Medical Council in respect of medical qualification Questions about alternative courses and about entry for or exemption from these examinations should be addressed by the student to the authorities of his college, and not to the Dean of the Medical School

The first step taken after this is usually the passing of the examination in organic chemistry for First B M Exemption can only be claimed by those who have passed certain examinations in chemistry of the University A man who has passed the preliminary examinations before coming into residence normally takes organic chemistry in his first term, and thereafter prepares for the examinations in human anatomy and physiology for First B M which he will probably take in his sixth term, though there are alternative courses He must pass simultaneously in both anatomy and physiology, unless he has previously been placed in the first or second class in the Final Honours School of Animal Physiology in which case he is exempted from the physiology part of First B M Nothing else can exempt him from the examination in this subject, and there is no exemption at all from that in human anatomy

Practically every medical student attempts to obtain the B A degree by taking the Final Honours School of Animal Physiology for this course diverts him least from purely professional work and passing the preliminary examinations mentioned above allows him to enter for this final examination The special course in preparation for it lasts one year, and the examination may not be taken earlier than the eighth term of residence unless the student has special status If he enters for the examination later than his twelfth term of residence he is over standing for honours

The student who has passed his preliminary examinations before coming into residence should thus have passed the examinations for First B M and for the degree of B A by the end of his third year at the University

He must thereafter prepare for the examinations for Second B M The subjects are at present materia medica and pharmacology, pathology, forensic medicine and public health, medicine surgery, and midwifery, at a future date, however, the pathology will become general pathology and bacteriology, and special pathology will be included by title, as it is now by practice, in medicine, surgery, and midwifery The examinations in the three first mentioned subjects can be taken separately as soon as the necessary conditions are fulfilled or simultaneously with any of the other Second B M examinations, on the other hand, a student must pass simultaneously in the last three subjects The examination in these may not be taken, unless the candidate is already a registered medical practitioner until the eighteenth term from matriculation and the lapse of at least thirty three months from the date of passing the examinations for First B M

The whole of the work for Second B M may be done in recognized institutions away from Oxford—for example the London medical schools Alternatively, a student who has

the necessary qualifications may spend the first six months in Oxford and thereafter do a further twenty seven months work elsewhere In this second case the courses which he will take at Oxford will last from September to the following March and will include instruction in pharmacology general pathology and elementary medicine and surgery

Further details about the course for the qualifying degree of B M B Ch and also about the higher medical and surgical degrees are to be found in the current edition of *University of Oxford Examination Statutes* and in a pamphlet entitled Information Concerning the School of Medicine etc both of which can be obtained from the Clarendon Press Oxford College authorities and the Dean of the Medical School University Museum Oxford will also give any assistance that is within their power

College entrance scholarships open to would be medical students are advertised each summer in special numbers of the *University Gazette* which can be bought for a few pence through any bookseller In addition many valuable prizes scholarships and fellowships are awarded to medical students and graduates they include the Radcliffe Travelling Fellowship the oldest of such endowments for postgraduate travel and study which is awarded annually after examination by the Master and Fellows of University College Details about these prizes etc can be found in the current edition of the *Oxford University Calendar*

It is very difficult to give an estimate of the expense of that part of the course which is passed in Oxford as the cost varies very much with the different colleges Eighty pounds a term is perhaps the amount paid by the average student but many manage on less than this Once the B A degree has been taken university and college dues are less

UNIVERSITY OF CAMBRIDGE

The professional degrees given by this university are those of Bachelor of Medicine (M B) and Bachelor of Surgery (B Chir) (these degrees cannot be taken separately) and the higher degrees of Doctor of Medicine and Master of Surgery It also grants a diploma in medical radiology and electrology to medical practitioners not necessarily graduates of the university Information regarding this diploma will be found in a later section under the heading Radiology A candidate for the M B B Chir degrees must have passed the Previous Examination or some other examination accepted by the university as its equivalent under the new regulations He must reach an honours standard in a Tripos Naturally most students will take the Natural Sciences Tripos which qualifies him for the degree of B A The attainment of a sufficient standard in certain subjects in this Tripos will secure exemption from the corresponding tests in the M B course Members of Girton College and Newnham College are admitted to the examinations

Professional Examinations

An explanation of the changes in the medical curriculum at Cambridge which came into force in October 1934 was given in the *British Medical Journal* of July 7 1934 (p 26) To obtain the M B B Chir degrees candidates must have reached an honours standard in a Tripos and passed the First and Final Medical Examination

First M B—This comprises (1) general and inorganic chemistry (2) physics (3) elementary biology (4) organic chemistry The parts may be taken together or separately In either case the candidate before admission to examination must have passed or been exempted from the Previous Examination Certain exemptions from the First M B Examination are allowed the regulations may be obtained from the Registrary An examination in each part is held three times in the year

A candidate for the Final Examination must have (*a*) completed the First Examination (*b*) dissected the whole body adequately and thoroughly (*c*) attended an approved course and passed an examination in Pharmacology (*d*) attained the honours standard in some Tripos (*e*) attended an approved course and passed an examination in anatomy and (*f*) in physiology

Final M B—This is divided into two parts to neither of which the candidate is admitted until he has fulfilled the conditions previously mentioned A candidate for the first part which deals with the principles and practice of surgery (including special pathology) and midwifery and diseases peculiar to women must have completed five years of medical study and be signed up in these subjects and have completed two years and a half of hospital practice Before admission to the second part the candidate must have completed five years of medical study and be duly signed up in all subjects and have completed three years of hospital practice The examination is in the principles and practice of physic (including diseases of children mental diseases and medical jurisprudence) pathology (including hygiene and preventive medicine) and pharmacology (including therapeutics and toxicology) The Final M B examinations are held twice a year—in June and December

The Higher Degrees

The M D degree may be taken by a graduate of the University of eight years standing who has passed the final M B Examination after writing a thesis approved by the M D Degree Committee and keeping a further Act He may also be allowed or required to take an examination oral or written or both on the field of Medicine within which the subject of his thesis falls

A candidate for the M Chir degree who is an M A may be admitted to the examination after he has become legally qualified to practise surgery Other candidates may be admitted when two years have elapsed after they have completed the requirements for the B Chir degree and may be admitted to the M Chir degree after three years have elapsed since they were admitted to the B Chir degree The examination comprises pathology surgery surgical anatomy and surgical operations The tests are partly in writing partly oral and partly practical they include the writing of an extempore essay The examination is held in February in each year

FEES

In addition to college fees tutorial fees and the expense of living the following examination fees are payable First M B £5 5s tests in Pharmacology Physiology and Anatomy £1 1s Final Examination £12 12s For schedules referring to the examinations list of schools and hospitals recognized by the university and other information application should be made to the University Registrary Cambridge

UNIVERSITY OF LONDON

Under the regulations of the University of London the degrees obtainable in the Faculty of Medicine are those of Bachelor of Medicine and Bachelor of Surgery Master of Surgery in four branches Doctor of Medicine in six different branches Bachelor of Dental Surgery and Bachelor of Pharmacy The university has its own matriculation examination and it is most advisable that candidates should obtain and carefully study the booklets relating to it The matriculation examination is open to any person of either sex who has attained the age of 16 It is held in January June and September and lasts four days the first two take place both in London and in certain provincial centres the September examination is held in London only

In no circumstances is a degree granted to anyone in less than three years after the date at which he passed the matriculation examination or obtained registration in some other way All medical students must normally spend not less than five and a half years in professional study subsequent to matriculation of which the last three years must be spent at a school of advanced medical studies

Professional Examinations

M B B S—There are three examinations the last being subdivided They are held twice a year

The First Examination (held in July and December) covers inorganic chemistry general biology and physic there being two papers a practical test and a possible oral test in each subject The names of successful candidates are placed in alphabetical order

The Second Examination is held in March and July Candidates must have passed the First Examination at least eighteen months previously The subjects are anatomy and physiology the tests being written oral and practical

No candidate unless he is already a registered medical practitioner is admitted to Parts II and III of the M B B S

Examination within thirty six months of the date of his passing the Second Examination The subjects are divided into three parts Part I (which may be taken six months earlier than the remaining parts) consists of Pathology and Hygiene and Forensic Medicine, Part II of Medicine and Applied Pharmacology and Therapeutics, and Part III of Surgery and Obstetrics and Gynaecology Any part may be taken first at the option of the candidate or the parts may be taken together There is no separate examination held for honours but the names of successful candidates who have passed all parts of the examination at one time, are divided into an honours list and a pass list and a university medal may be awarded the candidate who has most distinguished himself in the whole examination Supplementary lists are issued of candidates who have passed in one part only

The Higher Degrees

M D—An examination for the M D is held twice yearly—in December and July Every candidate must have passed the examination for the M B B S He may present himself for examination in any one of the following branches (1) medicine (2) pathology, (3) mental diseases and psychology (4) midwifery and diseases of women, (5) hygiene (6) tropical medicine and if he wishes may pass also in another branch at a subsequent examination

Two years must elapse between acquiring the M B B S and sitting for the M D in any branch except that in the case of Branches I–IV a candidate who has obtained honours at the M B B S Examination may enter for the M D Examination after one year Candidates may also be admitted to the M D Examination (Branches I–VI) one year after taking the M B B S Examination on the grounds of exceptional experience in their subject Certificates of approved appointments are required for the M D (Branches I–IV) except in the case of candidates who have been engaged in professional practice for five years In each branch the scheme of examination is the same two papers on its special subject a paper on an allied subject—for example medicine in the case of Branch IV pathology in Branch I—an essay on one of two suggested topics with the special subject and a clinical or other practical test Both written and practical examinations must be passed, though exemption can be obtained from the former in exceptional circumstances In any branch of the M D Examination a gold medal of the value of £20 may be awarded

M S—The regulations with regard to the Mastership in Surgery are of a corresponding kind but there are four branches in which it may be obtained—general surgery, dental surgery, ophthalmology and laryngology, otology, and rhinology

FEES

For Matriculation 2½ guineas for each entry First Examination 6 guineas for each entry to the whole examination For re examination in one subject the fee is 2 guineas Second Examination 12 guineas for each entry to the whole examination M B B S Examination 15 guineas for each entry to the whole examination and 5 guineas for examination or re examination in any part M D and M S Examinations 20 guineas, and 10 guineas on re examination

Inquiries should be addressed to the Academic Registrar, the Senate House University of London W C 1

UNIVERSITY OF BIRMINGHAM

This university confers medical and surgical degrees—namely, M B, Ch B, M D Ch M and M D (State Medicine)—also degrees in dentistry (B D S and M D S), and Diplomas in Dentistry (L D S), and in Public Health (D P H) A degree of Ph D is also conferred for research study in medicine under special regulations Candidates must be graduates in medicine of a recognized university The M B Ch B candidate may also take in the earlier part of his medical curriculum courses leading to the ordinary B Sc degree in anatomy and physiology, or B Sc with honours The extra time required for either of these science degrees is one year The full course of study for the degrees of M B, Ch B extends over six years The Senate has power to accept courses of study and examinations passed at other recognized universities as exempting from the examinations in physics, chemistry, biology, and organic chemistry In the case of such students at least three years must be spent in attendance upon classes at the university

Students entering the Medical Faculty for the M B, Ch B degrees must have satisfied the entrance requirements—

(1) Of the Joint Board of the Universities of Manchester, Liverpool Leeds Sheffield, and Birmingham The regulations and the list of examinations accepted will be sent on application to the Secretary to the Board, Joint Matriculation Board, 315, Oxford Road Manchester

(2) A recognized pre registration examination in the subjects of chemistry physics, and biology—for example, the higher school certificate of the Joint Matriculation Board or a candidate may attend first year courses in the university, October to June (chemistry, physics, and biology)—that is, First M B Ch B The three subjects must be taken together on first entrance for the examination, but credit may be given for any two subjects the remaining subject being passed at a subsequent examination

Professional Examinations

The candidate for the M B Ch B degrees has four examinations to pass subsequent to passing the First M B, Ch B Examination or exemption therefrom In the Second, Third, and Final examinations the candidate must pass in all the prescribed subjects or undergo the whole examination again

The First M B deals with physics, chemistry, and biology (pre registration) The Second M B comprises anatomy and physiology and the student must pass in both simultaneously The Third M B comprises pathology and bacteriology taken as one complete subject The Fourth M B takes place at the end of the fifth year the subjects being forensic medicine toxicology, public health and therapeutics (inclusive of pharmacology and materia medica)

Final M B—This comprises medicine, surgery, midwifery and diseases of women ophthalmology and mental diseases The candidate, in addition to more ordinary certificates, must be prepared with a certificate of having acted as a post mortem clerk for three months and received special instruction in anaesthetics and clinical instruction in diseases peculiar to women, asylum ward work, ophthalmology children's diseases, venereal diseases ear and throat and skin diseases etc In respect to ophthalmology he must show that he has learnt retraction work

M D—An ordinary candidate for this degree must be an M B, Ch B of not less than one year's standing He presents an original thesis for approval, and then passes a general examination in the principles and practice of medicine From the latter the Board of Examiners may exempt a candidate whose thesis is of exceptional merit. The regulations respecting the Ch M are of the same general character Subject to certain requirements as to special research or other post graduate study graduates of other universities may obtain the M D and Ch M in the same way as holders of the Birmingham M B, Ch B

The degree of M D (State Medicine) is open to M B Ch B graduates of the university who possess also a diploma in public health or degree in sanitary science or public health recognized by the university The period of postgraduate study for this degree must occupy one year in the case of Birmingham M B, Ch B graduates, and two years in the case of graduates of other universities

The degree of Ph D is open to qualified medical practitioners under special conditions applicable in the Faculty of Medicine Under these regulations the necessary attendance and research during a period of two years may be carried out in the laboratories of the university or in associated hospitals

FEES

The fee for Matriculation is £2 (payable to the Joint Matriculation Board) £2 10s for First M B Examination (if taken in university) and £2 10s for each of the first four Professional Examinations, M B Ch B degree fee, £10, M D and Ch M Examinations £12 10s each For further particulars application should be made to the Dean the Medical School Edgbaston, or the Registrar, the University, Edgbaston, Birmingham

UNIVERSITY OF BRISTOL

In the Faculty of Medicine the following degrees are conferred Bachelor of Medicine and Bachelor of Surgery (M B and Ch B), Doctor of Medicine (M D), Master of Surgery (Ch M), Bachelor of Dental Surgery (B D S) and Master of Dental Surgery (M D S) There are also the

following diplomas diploma in public health (D P H)[1] diploma in dental surgery (L D S) and diploma in veterinary State medicine All candidates for degrees in medicine surgery and dentistry are required to reach matriculation standard in the school certificate examination or to pass such examination as may be regarded as equivalent by the Senate All courses degrees and diplomas are open to men and women alike

Conjoined Degrees of Bachelor of Medicine and Bachelor of Surgery—Candidates must be not less than 21 years of age and have pursued the courses prescribed by university regulations during not less than five years after passing the First Examination in chemistry and physics and entry upon professional study at a medical school of which three shall have been spent in the university and two of these three subsequent to passing the Second Examination All candidates for the degrees of M B Ch B are required to satisfy the examiners in the several subjects of three examinations

The First Examination—The subjects of examination are chemistry physics and biology This part of the curriculum shall extend over one year (Candidates who have passed an equivalent higher school certificate examination in these subjects will not be required to sit for the First Examination and will be regarded as having completed one year of study provided they can produce evidence of having reached an adequate standard in organic chemistry)

The Second Examination—The subjects of examination are Group I anatomy and physiology Group II elementary pharmacology and elementary pathology

The Final Examination—The subjects of examination are materia medica and pharmacy pharmacology pharmacotherapeutics and toxicology pathology and bacteriology (Section I) forensic medicine public health obstetrics (including diseases of women) surgery (systematic clinical practical and operative including ophthalmology and oto rhino-laryngology) medicine (systematic clinical and practical including mental diseases) (Section II) The subjects included in Section II may be taken in two groups—namely Group I surgery and obstetrics Group II medicine public health and forensic medicine Candidates may pass Sections I and II together or separately and the two groups of Section II may likewise be taken together or separately but no student can obtain honours who elects to take the two groups of Section II separately

Degree of Doctor of Medicine—Candidates must be Bachelors of the university of not less than two years standing as such and may elect either (1) to pass an examination in general medicine or (2) to pass an examination in State medicine or (3) to present a dissertation The candidate who elects to pass the examination in State medicine must hold a diploma in public health of some university or college and the candidate who elects to present a dissertation may be examined in the subject thereof

Degree of Master of Surgery—The degree may be taken in general surgery or in special subjects Candidates shall be Bachelors of the university who have practised for two years in an approved hospital (including the holding of an approved appointment for six months) and one of the two years shall have been spent in a hospital with a medical school attached They shall present a dissertation and pass an examination For general surgery the examination shall include a written examination in surgery a written examination in surgical anatomy and surgical pathology a clinical examination an oral examination and an examination in operative surgery For special subjects—that is ophthalmology or oto rhinolaryngology or gynaecology—the examination shall include a written examination in the anatomy physiology and pathology of the region of the body concerned (including in the case of ophthalmology physiological optics) and a written examination in general surgery together with a written oral and clinical examination in the particular branch of surgery concerned, as well as an examination in operative surgery of the region concerned

UNIVERSITY OF DURHAM

To its own undergraduates who may be of either sex this university grants the degrees of Bachelor of Medicine and Bachelor of Surgery (M B B S) and also grants the higher degrees of Doctor of Medicine (M D) Master of Surgery and Doctor of Surgery (M S and D Ch) Bachelor of Hygiene Doctor of Hygiene (B Hy and D Hy) and Bachelor of Dental Surgery and Master of Dental Surgery (B D S and M D S) it also grants diplomas in public health psychiatry and dental surgery The university accepts the Durham University School certificate examination (if a sufficient standard is obtained in certain specified subjects) for matriculation purposes but also accepts the tests of a considerable number of other educational bodies as a full or partial equivalent A list may be obtained on application In addition to satisfying the matriculation requirements of the university every student under regulations coming into force on November 1 1938 must pass the First (Pre Medical) Examination in inorganic organic and physical chemistry physics botany and zoology and be registered on the books of the General Medical Council The university requires that at least three years be spent in residence in the university in certain cases candidates may obtain exemption from the First and Second Examinations but the later professional examinations must be passed in the university

Professional Examinations

In addition to the First (Pre Medical) Examination there are three other professional examinations for the M B B S degrees The First (Pre Medical) Examination is held in June and December the Second and Third Examinations in March and June and the Final Examination in June and December The first (Pre Medical) deals with the subjects as above mentioned the second with anatomy and physiology the third with pathology bacteriology materia medica pharmacology and pharmacy medical jurisprudence and public health At the Final M B B S the candidate is examined in medicine including therapeutics and clinical medicine surgery and clinical surgery midwifery and diseases of women and children clinical and practical midwifery and gynaecology and clinically in psychological medicine diseases of the throat nose and ear diseases of the skin diseases of the eye and diseases of children

M D—This degree is only open to Bachelors of Medicine of the university They must be of at least two years standing and must comply with the regulations printed in the Prospectus of the Medical School King's College Newcastle upon-Tyne (formerly the University of Durham College of Medicine)

M S—Candidates for this degree must have been engaged in practice for at least two years subsequent to qualifying M B B S Durham The subjects of the examination are surgery systematic and clinical surgical anatomy and pathology and surgical operations

D Ch—The university grants also the degree of Doctor of Surgery Candidates for this degree must be registered medical practitioners not less than 25 years of age They must devote three years subsequent to obtaining a registrable qualification to the study of surgery and ancillary subjects one at least of the three years must be spent in the university The candidate must submit to the professor of surgery the course of study he proposes to follow and this course must be approved by the Board of the Faculty of Medicine

One year must be devoted mainly to work in the departments of anatomy physiology pathology and bacteriology and the candidate must submit evidence of having so worked Not less than six months of another year must be spent as a resident surgeon in a recognized teaching hospital and the rest of the year in the study of surgery in a recognized medical centre Not less than six months of one of the three years must be spent in surgical study abroad

BACHELOR OF HYGIENE AND THE D P H.

A period of not less than two years must elapse between the attainment by a candidate of a registrable degree or qualification in medicine surgery and midwifery and his admission to Part II of the examination for the degree of B Hy or for the D P H of the university as the case may be The curriculum extends over a period of not less than twelve calendar months of which not less than three consecutive calendar months shall be devoted to whole time study in the subjects of Part I (or an academic year of whole time study covering a period of not less than nine calendar months) subsequent to the attainment of a registrable degree or qualification Candidates for the B Hy must take out the curriculum for Part I of the exam

[1] At present in abeyance

mination at the University of Durham, but for the D P H may do so either at the university or at any medical school or institution recognized by the university The examination is divided into two parts Part I is written and oral, with a practical examination in bacteriology, and includes the subjects of bacteriology and parasitology (including immunology serology, medical entomology, etc) chemistry, physics physiology, and biochemistry in their application to environmental and personal hygiene and to the public health The subjects in Part II include the principles of hygiene, sanitation and public health epidemiology vital statistics, public health law and administration (including public medical services) sanitary construction and house planning, and public health administration, principles of genetics and mental hygiene This part of the examination is written and oral and includes practical examinations in infectious diseases food inspection, inspection of premises, dwelling houses factories workshops, schools etc

Candidates are not admitted to examination in either part until after they have completed the prescribed courses of instruction in the required subjects

DOCTOR OF HYGIENE

Candidates for the degree of Doctor of Hygiene must be Bachelors of Hygiene of the university of two years standing, and are required to satisfy the examiners that they have conducted original research in the subject of public health

DIPLOMA IN PSYCHIATRY

Candidates must be registered medical practitioners and, unless qualified before January 1 1911 must have attended, subsequent to passing their qualifying examinations, courses of instruction in (*a*) anatomy, (*b*) physiology, (*c*) pathology, (*d*) bacteriology, (*e*) psychology and experimental psychology, (*f*) clinical neurology (*g*) psychiatry, (*h*) clinical psychiatry The examination consists of two parts namely (1) anatomy physiology pathology and bacteriology (2) psychology and experimental psychology neurology, and psychiatry (systematic and clinical), and candidates may present themselves for the whole examination or for either part separately

FEES

The following fees are payable Matriculation, £2 Examinations First (Pre Medical) £2, Second and Third M B, B S, each £5, Final M B, B S £15 M D and M S each £5, B Hy and D P H £12 12s, D Psy, £10 10s and D Hy and D Ch, each £20 First Second and Third L D S each £3 10s and Final L D S £5 First Second and Third B D S each £5, Final B D S, £8, and M D S £5 For degrees and diplomas M B, B S, B Hy, and B D S, each £6 6s *plus* the sum of 10s if it is the initial degree taken in the university, M S and M D S each £6 6s M D D Ch, and D Hy, each £10, D P H, D Psy, and L D S each £3

Further information may be obtained from the Dean of Medicine, Medical School, Queen Victoria Road, Newcastle-upon-Tyne

UNIVERSITY OF LEEDS

The degrees granted in the Medical Faculty of this university are Bachelor of Medicine, Bachelor of Surgery (M B and Ch B), and Bachelor of Dental Surgery (B Ch D), Doctor of Medicine (M D), Master of Surgery (Ch M), and Master of Dental Surgery (M Ch D) Diplomas are awarded in public health, in psychological medicine, in dental surgery, and in nursing

Candidates for the M B must have attended courses of instruction approved by the university for not less than five years, two at least of such years having been passed in the university, and one year subsequent to the date of passing the first examination They must also have satisfied the requirements of the Northern Universities Joint Matriculation Board The normal requirement for entry is the possession of a School Certificate supplemented by a performance in the Higher School Certificate

Full information is contained in the pamphlet 'Qualifications for Entry upon a Degree Course,' which may be obtained on application to the Secretary to the Board, 315, Oxford Road Manchester, 13 Except in cases specially approved by the Senate candidates are required to present evidence of possessing a knowledge of mathematics at least equivalent to that of the Pass standard at a School Certificate Examination

Exemption from the examination may be granted to applicants holding certificates of having passed examinations of a standard deemed by the Matriculation Board to be at least equal to the Board's examination

Professional Examinations

The examinations for the M B, Ch B are

The First Examination—This consists of four parts (1) physics and inorganic chemistry, (2) organic and physical chemistry, (3) botany (4) zoology each of which may be taken separately, but candidates are not permitted to start their second year's work until Parts 1, 2, and 3 have been passed

The Second Examination—This consists of Part I materia medica and practical pharmacy, Part II, anatomy and physiology Candidates may pass each part separately

The Third Examination—This consists of pathology and bacteriology and pharmacology, and may not be taken before the end of the second clinical year

The Final Examination—The final examination consists of Part I, public health and forensic medicine, Part II, medicine surgery, obstetrics and gynaecology, and therapeutics Part I may be taken nine months after a candidate has passed the Third Examination Part II may not be taken before the end of the third clinical year or before the completion of the fifth year of medical study Part II may be taken before Part I

M D—Candidates for this degree must be bachelors of medicine and bachelors of surgery of the university and subsequently to having graduated must have completed two years of hospital practice or special study approved by the university or four years in the practice of their profession in one or other of its various branches, six months hospital practice or special study to count as the equivalent of one year's ordinary practice Any subject of the medical curriculum except surgery may be chosen for the examination but a thesis the title of which must previously receive the approval of the Board of the Faculty of Medicine, may be submitted and if it is adjudged to be of exceptional merit the candidate may be exempted from further examination

Ch M—The candidate for this degree must have been admitted to the M B Ch B of the university not less than a year previously, and during that time must have held for at least six months a surgical appointment in a public institution affording full opportunity for the study of practical surgery He must also have attended certain courses including one on pathology and bacteriology he is then examined in surgery in all its branches and in pathology and bacteriology

FEES

The fee for the examination for Matriculation is £2, and on readmission £2 or £2 2s 6d, for each examination for the M B, Ch B degree £6 and £6 on readmission, the Third and Final Examinations being regarded as one examination

The fees for the examinations for the M D and Ch M degrees are each £10 The fee for conferment of each of these degrees is £5

UNIVERSITY OF LIVERPOOL

This university, besides granting degrees in medicine and surgery (M B, Ch B, M D, Ch M, M Ch Orth), awards degrees in dental surgery and in veterinary science Diplomas are awarded in tropical medicine (D T M), tropical hygiene (D T H), public health (D P H), medical radiology and electrology (D M R E), also in dental surgery and in veterinary hygiene The degree of Doctor of Philosophy (Ph D) may also be taken in the Faculty of Medicine

Qualifications for Entry upon a Degree Course

Students who intend reading for a degree are required before beginning their courses, to have passed the examination or examinations for matriculation into the university or an examination or examinations recognized as exempting there from Qualification for entry upon a degree course will normally be based upon the performance of the candidate in the School Certificate and Higher School Certificate examinations conducted by the Joint Matriculation Board or by other recognized examining bodies The Joint Board is prepared to consider applications for exemption from the examination or examinations for matriculation into the university from persons who have passed equivalent

superior examinations Such applications should be addressed to the Secretary Joint Matriculation Board 315 Oxford Road Manchester 13

Professional Examinations

Candidates for the M B Ch B degrees have three examinations to pass the first including (1) chemistry (2) biology (zoology and botany) (3) physics

Second M B—This covers (1) anatomy (2) physiology including biochemistry and histology

Final M B—The subjects of the Final Examination are Part I—(*a*) pathology (*b*) pharmacology and general therapeutics Part II—(*a*) forensic medicine and toxicology (*b*) public health Part III—(*a*) obstetrics and gynaecology (*b*) surgery systematic clinical operative and practical including ophthalmology (*c*) medicine systematic and clinical including therapeutics mental diseases and diseases of children Candidates may take Parts I II and III separately provided that candidates may not present themselves for Part III until they have completed the sixth year of medical study and have passed the examinations in Parts I and II

M D—May be conferred on graduates (M B Ch B Liverpool) (i) on candidates of two years standing Such candidates shall be required to present a thesis certified to be the candidate's own work together with copies of published original papers upon Medical Science (if the candidate desires) The thesis shall embody the results of personal observations of original research either in some branch of medicine or in some science directly relative to medicine If the thesis is accepted by Faculty after report from the assessors the candidate shall present himself for an oral examination on the subject of the thesis (ii) on candidates of five years standing by examination in (*a*) medicine and (*b*) a selected branch of medicine

Ch M—May be conferred on graduates (M B Ch B Liverpool) after examination

M Ch Orth—May be conferred on graduates in Medicine of Liverpool or other approved university and graduates of a Faculty other than Medicine of Liverpool or other approved university who are Fellows of the Royal College of Surgeons of England Edinburgh or Ireland or of the American College of Surgeons

Other information concerning the diplomas of this university will be found on page 530

Fellowships, Scholarships, Exhibitions, and Prizes

The University awards Fellowships annually to students of distinguished merit as follows

(1) John Rankin Fellowships in anatomy two each of the value of £120 tenable for two years (2) Ethel Boyce Fellowship in gynaecology value £100 and tenable for one year (3) John W Garrett International Fellowship in bacteriology value £100 and tenable for one year (4) Robert Gee Fellowship in human anatomy value £100 and tenable for one year (5) Holt Fellowships in physiology and pathology two in number value £150 each and tenable for one year (6) Johnston Colonial Fellowship in biochemistry value £100 and tenable for one year (7) Thelwall Thomas Fellowship in surgical pathology value £150 and tenable for one year (8) Lady Jones Fellowship in orthopaedic surgery one tenable for one year value £200 offered every two years

There are in addition scholarships exhibitions and prizes open to medical students

Scholarships—The awards made each year to successful students total over £1 500 They include the following a University Scholarship of £50 awarded on the results of Part I of the Final M B Examinations a Ridgway Research Scholarship (£94) a T J Hughes Research Scholarship (£72) a Scholarship in mechanical dentistry of £20 two Lyon Jones Scholarships of the annual value of £19 each for two years awarded one on the results of the First M B Examination the other on the Second M B the Derby Exhibition of £15 the Clinical School Exhibition of £15 the Owen T Williams Prize the Torr Gold Medal in Anatomy John Rankin Exhibition in practical anatomy £23 the George Holt Medal in physiology the Kanthack Medal in pathology Mitchell Banks Medal in anatomy the Robert Gee Prize of £5 5s in children's diseases Mary Birrell Davies Memorial Scholarship (Women) £60 per annum for four years Robert Gee Entrance Scholarship (men) value of £42 10s per annum for four years Dental Operating Prizes (four) Orthodontia Prizes (two) Samuels Memorial Scholarships three at £27 each one Thomas H Bickerton Prize in anatomy Dr N E Roberts Prize in zymotic diseases Adami Prize in pathology Leith Murray Memorial Prize in obstetrics and gynaecology Rich Prize J Hill Abram Prize in pharmacology and general therapeutics J Hill Abram Prize in medicine A h s Prize in dental surgery value £2 2s Gilmour Medal and other entrance scholarships In addition a number of gold and silver medals have recently been instituted in the following subjects pharmacology surgery forensic medicine and toxicology public health medicine orthopaedic surgery obstetrics and gynaecology and laryngology and otology

FEES

Information as to the fees for the courses of instruction should be sought from the Dean of the Medical Faculty

VICTORIA UNIVERSITY OF MANCHESTER

This university grants the four ordinary degrees in medicine and surgery—M B and Ch B and M D and Ch M degrees and a diploma in dental surgery a diploma in public health a diploma in psychological medicine and a diploma in bacteriology Candidates for degree courses must pass the examinations prescribed by the Joint Matriculation Board and include the special subjects required by the Faculty of Medicine—namely English Mathematics Latin and Mechanics At least two years of the six years curriculum subsequent to the passing of the First M B examination must be taken at the University

Professional Examinations

M B Ch B—There are four examinations for these degrees They must be passed in proper order and before admission to them the candidate must be duly certified as having attended in the subjects involved The First M B is divided into Part I chemistry and physics Part II biology—(*a*) botany (*b*) zoology The parts may be taken separately or together At the Second M B the candidate is examined in anatomy (including histology) and physiology at the third in pathology bacteriology and pharmacology (including materia medica and practical pharmacy) The Final Examination is divided into two parts which may be taken separately Part I consists of (*a*) forensic medicine and toxicology and (*b*) hygiene and preventive medicine Part II consists of (*a*) medicine including dermatology diseases of children and mental diseases (*b*) surgery surgical pathology and diseases of the eye and of the ear nose and throat (*c*) obstetrics and gynaecology

M D—A candidate for this degree must be a Bachelor of Medicine of the university of at least one year's standing. He has a choice between presenting an original dissertation or undergoing a written (as well as a practical and clinical) examination in medicine a written and practical examination in pathology and one other subject selected by himself Notice of intention to present a thesis must be given to the Registrar by March 1

Ch M—A candidate must have held since becoming Ch B of the University and for not less than twelve months a post in a public institution affording opportunity for the study of the branch of surgery in which examination is desired The examination in Branch I comprises the general field of surgery Branch II obstetrics and gynaecology Branch III ophthalmology Branch IV otology laryngology and rhinology

B Sc and M Sc—The ordinary degree of B Sc in the Schools of Anatomy and Physiology may be obtained by students in medicine who in their third year of study for the degrees of M B Ch B complete the additional courses in these subjects prescribed for this degree The degree of B.Sc with Honours in Anatomy or Physiology may be obtained by students in medicine who after completing the third year of study for the degrees of M B Ch B devote the following year to the study of the subject of the Honours School Graduates in science of this university of not less than one year's standing from the date of their graduation as Bachelors may proceed to the degree of M Sc by the presentation of an approved thesis on some subject coming within the scope of the Faculty of Science

FEES

The following examination fees are payable Matriculation £2 on readmission £2 Each M B examination £8 8s on readmission £3 3s M D including the conferring of the

degree, £10 10s Ch M, £10 10s for the examination and £8 8s for conferment of degree Application for further information should be addressed to the Dean of the Medical School

UNIVERSITY OF SHEFFIELD

The degrees of this university (M B, Ch B, M D and Ch M, B D S and M D S), and the diploma of licentiate in dental surgery, are open to candidates of either sex Candidates for a degree must have matriculated in the university or have passed such other examination as may be recognized for this purpose The pre-registration examination may be passed either before or after entering the university

Professional Examinations

A candidate for the degrees of M B, Ch B must produce certificates that he will have attained the age of 22 years by the day of graduation, that he has pursued the courses of study required by the university regulations during not less than five and a half years subsequent to the date of his matriculation or exemption from matriculation, three of such years at least having been passed in the Faculty of Medicine of the University, one at least being subsequent to the passing of the Second Examination The following examinations must be passed in due order

First Examination—The subjects are chemistry, physics, and biology Candidates who have passed the Intermediate Examination of the Faculty of Pure Science in any or all of the subjects of the First M B Examination will on payment of the fee for the latter examination be deemed to have passed it when they have passed in such subjects as they did not take for the Intermediate B Sc Examination Candidates on presenting themselves for this examination are required to furnish certificates of having attended for not less than one year approved courses of instruction after matriculation in (1) chemistry, inorganic and organic, (2) physics, (3) biology, and of having passed or obtained exemption from the preliminary examination in chemistry and physics

Second Examination—The subjects are anatomy and physiology (Part I) Candidates must have passed the First Examination and must have attended (1) courses on anatomy, including lectures and practical anatomy during five terms, (2) courses on physiology, including lectures and practical physiology, during one year

Third Examination—The subjects are pathology and pharmacology, applied anatomy, and physiology (Part II) Candidates must have attended courses of instruction in pathology for five terms in pharmacology for three terms (and one term in pharmacy), in applied anatomy for four terms, and in physiology (Part II) for six terms

Final Examination—The subjects are Part I, forensic medicine and public health candidates must have attended courses for one term in each subject Part II medicine (including mental diseases, diseases of children, vaccination special pathology with morbid anatomy and clinical pathology) and therapeutics Part III, surgery (including the administration of anaesthetics, diseases of the ear nose, and throat, ophthalmology and surgical pathology) and obstetrics and gynaecology (including ante-natal and post natal practice and infant hygiene) Candidates for Parts II and III must have completed a minimum of five and a half years of study

M D—Candidates for the degree of Doctor of Medicine must have passed the examination for the degrees of M B, Ch B at least three years previously, must present a thesis embodying observations in some subject approved by the Professor of Medicine and must pass an examination in the principles and practice of medicine

Ch M—Candidates for the degree of Master of Surgery must have passed the examination for the degrees of M B, Ch B at least three years previously, and must, since taking the degrees of M B, Ch B, have held for not less than twelve months a surgical appointment in a public hospital or other public institution affording full opportunity for the study of practical surgery The subjects of examination are systematic clinical and operative surgery, surgical anatomy, surgical pathology, and bacteriology

Other information concerning this university will be found in the section devoted to Provincial Medical Schools

UNIVERSITY OF WALES

The Welsh National School of Medicine

The university grants degrees in Medicine and Surgery—Bachelor in Medicine and Bachelor in Surgery (M B, B Ch), Doctor in Medicine (M D), and Master in Surgery (M Ch)—and Diplomas in Public Health (D P H) and Tuberculous Diseases (T D D)

M B and B Ch Degrees—Candidates are required to pursue a course of study of not less than six academic years subsequent to their matriculation in the university They must hold an arts or science degree of the University of Wales, or of some other university approved for the purpose, but certain of the courses pursued for a B Sc or a B A degree may be counted as required for the medical degrees The courses for the M B, B Ch are divided into two sections The first includes Physics, Chemistry, Biology (Botany and Zoology) (Preliminary Subjects), Organic Chemistry (Subsidiary Subject), Human Anatomy and Physiology (Ancillary Subjects) Study of the preliminary subjects and of Organic Chemistry must extend over at least one academic year, study of Physiology and Human Anatomy must extend over at least two academic years, the first section of the course must occupy not less than three years The second section includes courses in Pharmacology Pathology and Bacteriology, Hygiene and Forensic Medicine Medicine Surgery, and Obstetrics and Gynaecology These courses cannot be commenced until the examinations of the first section have been completed Examinations in all subjects of the second section are held twice each year

M D Degree—Every candidate for the degree of *Doctor in Medicina* shall satisfy the examiners in an examination in clinical medicine and shall submit a thesis to the judgment of the university A candidate may present himself for the examination in clinical medicine during or subsequently to the second year after qualification for the degrees of *Baccalaureus in Medicina* and *Baccalaureus in Chirurgia* and may submit his thesis during or subsequently to the third year after qualification for those degrees The thesis shall embody the results of the candidate's personal observation or original research in some branch of medical knowledge or of some science directly relative to medicine, excepting a subject that is exclusively surgical The candidate shall indicate in what respects his thesis appears to him to advance medical knowledge or practice A candidate shall be required to submit himself to an oral or other examination on the subject matter of the thesis, provided always that in exceptional circumstances it shall be within the discretion of the university to exempt a candidate from such an examination

M Ch Degree—Every candidate for the degree of *Magister in Chirurgia* shall satisfy the examiners in an examination in surgery and shall submit a thesis to the judgment of the university A candidate may present himself for the examination in surgery during or subsequently to the second year after qualification for the degrees of *Baccalaureus in Medicina* and *Baccalaureus in Chirurgia* and may submit his thesis during or subsequently to the third year after qualification for those degrees The examination in Surgery shall consist of two parts Part I—(1) Surgical Anatomy, (2) Bacteriology and Surgical Pathology, Part II—(1) Surgery, (2) Clinical Surgery, (3) Operative Surgery No candidate shall be deemed to have passed in Part II unless he has satisfied the examiners in Part I of the examination The thesis shall embody the results of the candidate's personal observation or original research in some branch of surgical knowledge or of some science directly relative to surgery The candidate shall indicate in what respects his thesis appears to him to advance surgical knowledge or practice A candidate shall be required to submit himself to an oral or other examination on the subject matter of his thesis, provided always that in exceptional circumstances it shall be within the discretion of the university to exempt a candidate from such examination

Clinical Institutions—Clinical teaching is carried out in the Cardiff Royal Infirmary (484 beds) the Llandough Hospital (City of Cardiff) (345 beds) the City Lodge Hospital (City of Cardiff) (604 beds) the Cardiff City Mental Hospital (700 beds), the Cardiff City Isolation Hospital (230 beds), the Prince of Wales' Hospital (Orthopaedic) (132 beds), the Cefn Mably, Glan Ely and Sully Hospitals (Tuberculosis) (608 beds), the Lord Pontypridd Hospital (Acute Rheumatism of Children) (25 beds) These institutions are modern and well equipped and provide facilities for both in patient and out patient clinical instruction The Cardiff Royal Infirmary is the main teaching hospital It serves a district having a population of over

than half a million and during the year 1937 6234 patients were admitted to the wards and 40 530 patients treated in the out patient departments

Scholarships Free Studentships Prizes and Medals—Entrance Scholarships County Free Studentships and Scholarships are available Particulars of these are contained in a special prospectus which can be obtained on application An Isaac Roberts Scholarship in Science of the value of £50 per annum tenable for three years is awarded triennially on the results of the Entrance Scholarship Examination of the Cardiff College The Samuel Brothers Scholarship value £12 to £15 is awarded annually on the results of the work of the first year medical course at Cardiff College The Dr Price Prize value £20 is awarded annually on the results of the work of the first year of the medical course at the Cardiff College The Dr Howell Rees Scholarship value £17 10s is awarded triennially and is held in the Welsh National School of Medicine it is awarded on the results of the examinations in anatomy and physiology Numerous other prizes are awarded for proficiency in different subjects

Research Scholarships—A Catherine Buckton Scholarship of £60 for one year is offered periodically by the council of Aberdare Hall (one of the halls of residence for women students) to a woman who shall undertake to do postgraduate work The Mrs John Nixon Research Scholarship of £150 per annum is available for the promotion of research in medicine and medical pathology The Lord Merthyr Research Scholarship value £200 per annum is available for the promotion of research in cancer A Cecil Prosser Research Scholarship value £250 per annum is available for the promotion of research in tuberculosis The Ewen Maclean Research Scholarship value £150 per annum is available for the promotion of research into the factors which constitute and the conditions which vary resistance to disease especially as regards midwifery Inquiries should be addressed to the Secretary The Welsh National School of Medicine 10 The Parade Cardiff

English Medical Corporations

There are in England three medical corporations which grant licences to practise—the Royal College of Physicians of London the Royal College of Surgeons of England and the Society of Apothecaries of London The first two combine for certain purposes to form what is known as the Conjoint Board in England Details concerning this body its component Colleges, and the third licensing body here follow

THE CONJOINT BOARD

This body—the Examining Board in England—deals with the qualifications of all candidates for the Licence of the Royal College of Physicians of London and for the Membership of the Royal College of Surgeons of England It prescribes for them certain periods of study, and recommends those who pass the required examinations for the Licence and for the diploma of Member respectively The successful candidate is then entitled to register as L R C P Lond, M R C S Eng It performs the same task in connexion with diplomas in public health tropical medicine and hygiene ophthalmic medicine and surgery, psychological medicine, laryngology and otology medical radiology, anaesthetics and child health jointly issued by the two Colleges Under the present regulations every candidate for the L R C P and M R C S must (1) complete five years of professional study after passing a recognized preliminary examination and a recognized pre-medical examination in chemistry, physics and biology (2) comply with the regulations which may be had from the Secretary Examination Hall, Queen Square London W C 1 and (3) pass the two professional examinations of which particulars appear below

Regulations for the Conjoint Diplomas

The following is an outline of the present regulations for the L R C P Lond and M R C S Eng The full regulations and synopses and forms of certificate may be obtained from the Secretary

Pre Medical Examination

Students are required to pass a pre medical examination in chemistry physics and elementary biology conducted by the Conjoint Examining Board before commencing the five years curriculum of professional study or some other examination recognized by the Board—namely the examination in chemistry physics and biology for the degree in Medicine of any university recognized by the Board the higher school certificates of Oxford and Cambridge Universities and the Oxford and Cambridge Schools Examination Board the higher certificates of London Bristol and Durham Universities the Joint Matriculation Board of the Northern Universities or the Central Welsh Board higher certificate

A candidate may enter for the three subjects separately or may take the whole examination together He will be admitted to the examination on producing evidence of having passed the required preliminary examination in general education

The examination is partly written partly oral and partly practical A candidate rejected in one or more subjects of the examination will not be admitted to re examination until after the lapse of a period of not less than three months

Professional Examinations

There are two professional examinations called the First and Final Examinations

First Professional Examination—The subjects of this are Part I (*a*) Anatomy including histology and embryology (*b*) Physiology including biochemistry Part II Pharmacology and materia medica A candidate must have attended at a recognized Medical School courses of instruction in anatomy including embryology during five terms in the course of which he must have dissected the whole body courses of instruction in physiology including biochemistry and biophysics during five terms courses of instruction in pharmacology and materia medica A candidate may present himself for the two parts together or separately but he must take sections (*a*) and (*b*) of Part I together until he has passed in one or both sections a candidate will not be allowed to pass in one section unless he obtains at the same time at least half the number of marks required to pass in the other section Part II of the examination may be passed at any time before the candidate enters for the Final Professional Examination provided that the courses for admission to Part I have been completed A candidate who produces satisfactory evidence of having passed an examination in the subjects of Part I or either section of Part I and of Part II in the examination for the degree in Medicine conducted at a university recognized by the Board will be exempted from further examination in such subject or subjects

Final Professional Examination—The subjects of this are Part I Pathology (including morbid anatomy morbid histology and clinical pathology) and Bacteriology Part II Medicine including medical anatomy forensic medicine and public health Part III Surgery including surgical anatomy and the use of surgical appliances Part IV Midwifery and gynaecology The examination is partly written partly practical partly clinical and partly oral A candidate may take the several parts of the Final Examination separately or may take the whole examination together He will be required to produce the certificates prescribed by the regulations before being admitted to the respective parts of the examination No exemption is granted from any subject in the Final Examination

Fees

The fee for the *Pre medical Examination* is six guineas for re examination in Chemistry two guineas for re examination in Physics two guineas and for Biology two guineas The fee for the *First Professional Examination* is ten guineas for re examination after rejection in Section I six guineas for re examination after rejection in either part of Section I three guineas for re examination after rejection in Section II two guineas The fee for admission to Part I of the *Final Professional Examination* is four guineas for admission to Part II ten guineas Part III ten guineas Part IV six guineas and the re examination fees are respectively three guineas six guineas six guineas and five guineas

ROYAL COLLEGE OF PHYSICIANS

This College has three grades—its Licentiates its Members and its Fellows The Licence is now only issued through the Conjoint Board The Membership (examinations for which are held in January April July and

October) is only granted to those who have obtained the Licence or to those who are graduates of a recognized university, in any case they must be persons over 23 years of age Candidates are examined in pathology and the practice of physic, partly in writing and partly viva voce, they are also examined in French and German The languages are not compulsory, but credit is given to those who show a knowledge of them The fee for the Membership is £42, or in the case of a Licentiate £21 There is a fee of £10 10s, payable before entrance to the examination, which in the case of successful candidates is reckoned as part of the Membership fee The body of Fellows is maintained by election from among the Members

ROYAL COLLEGE OF SURGEONS

This College conducts examinations for the Membership and for the Fellowship The Members are admitted as stated in the section dealing with the Conjoint Board The Fellowship is granted after examination to persons at least 25 years of age who have been engaged in professional studies for six years There are two examinations for the Fellowship—the Primary in anatomy and physiology, held in the months of June and December, which may be passed after the third winter session, the Final held in the months of May and November, chiefly directed to surgery, which may be passed after six years of professional study Candidates must pass the Final Examination of the Examining Board in England and be admitted Members of the College before admission to the Second Examination for the Fellowship, except in the case of graduates in medicine and surgery of not less than four years' standing of universities recognized by the College for the purpose All candidates are required to have held for six consecutive months a responsible post in charge of general surgical patients in the wards of a general hospital recognized by the Council

Fees—At First Examination £8 8s (for re examination, £5 5s) At Second Examination £15 15s Admission fee £10 10s for members, £31 10s for non-members

SOCIETY OF APOTHECARIES

This Society confers a registrable diploma in medicine, surgery, and midwifery (Licentiate in Medicine and Surgery of the Society of Apothecaries, L M S S A), on those successful at the following examinations

Pre medical Examination—Chemistry and physics, and elementary biology

Primary Examination—This includes anatomy, physiology and histology, written, oral, and practical, and materia medica and pharmacy written and oral Candidates referred in anatomy or physiology will be required to produce evidence of further study before being admitted to re examination Candidates will be excused any or all of the subjects of the Pre medical and Primary Examination on producing evidence that they have passed the equivalent examinations before an examining body recognized by the Society

Final Examination—This is divided into three sections, which may be taken at separate examinations—namely S, M, and O S, Principles and practice of surgery, including surgical pathology, surgical anatomy, operative manipulation instruments and appliances, M, Principles and practice of medicine, including therapeutics, pharmacology, and prescriptions, general and medical pathology, bacteriology, and morbid histology, forensic medicine hygiene, theory and practice of vaccination and mental diseases O, Midwifery, gynaecology, diseases of newborn children obstetric instruments and appliances S, M and O are written, oral, and clinical There is no exemption from any subject of the Final Examination Candidates referred in S, M, or O will be required to produce evidence of further study before re examination

The fee for the Pre medical Examination is £5 5s for the Primary and Final, £26 5s, payable in three instalments The regulations and synopses relating to the several examinations, and other information may be obtained from the Registrar, The Society of Apothecaries Water Lane, Queen Victoria Street, E C 4 (telephone Central 1189)

MASTER OF MIDWIFERY

The Society in 1928 instituted a Mastery in Midwifery, and issues a diploma under this title denoting the possession of specialized knowledge of ante natal care, midwifery, and infant welfare and the public health aspects of these subjects The examinations take place in May and November and candidates are required to submit certificates, etc twenty one days before date of examination A severe test has been imposed so as to ensure a high standard of professional knowledge but the diploma is not registrable under the Medical Acts. Admission is open to all who have been for not less than three years in possession of a registrable medical qualification and who have had certain prescribed experience at recognized institutions concerned with obstetrics ante natal work, and infant welfare work Medical officers employed by a public health authority and having special duties connected with maternity and child welfare, are admitted to the examination on production of evidence to that effect The entrance fee for the examination is £10 10s and a further fee of £10 10s is payable by successful candidates *before admission* to the Mastery Copies of the regulations may be obtained from the Registrar at the address given in the preceding paragraph

British College of Obstetricians and Gynaecologists

One of the principal objects of the College is to encourage the study and practice of obstetrics and gynaecology, subjects which should be inseparably interwoven The College consists of Fellows and Members

Candidates for the Membership must have been entered on the British *Medical Register* for at least three years or be eligible for entry thereon Before being accepted for the examination they must produce evidence, satisfactory to the examination committee, of having held resident hospital appointments in general medicine or surgery and in obstetrics and gynaecology for the period laid down in the regulations (at present six months each) The examination consists of the presentation of case records and commentaries, two written papers, and an oral and clinical examination The Fellowship is granted to those Members who are judged to have advanced the science and art of obstetrics and gynaecology

The Fellowship and Membership include practically every teacher of obstetrics and gynaecology in Great Britain and the British Dominions Fellowship or Membership is now a necessary qualification for election to the staff of many obstetric and gynaecological hospitals, and it is anticipated that in time it will be essential for election to the staff of all such hospitals, consequently all intending to specialize in obstetrics and gynaecology should endeavour to obtain the Membership as soon as possible

For those practitioners who have had special post graduate experience in obstetrics, but whose experience and work do not allow of their admission to the Membership, the College grants a diploma (D C O G) Candidates for it must be entered on the British *Medical Register* They must produce evidence of resident post graduate experience in obstetrics as well as in general medicine or surgery Evidence of having regularly attended at ante natal, post natal, and infant welfare clinics and a satisfactory course in gynaecology is also required,

The D C O G is intended to indicate that the holder is a competent obstetrician and one who may be regarded as sufficiently capable to act in the capacity of consultant to local authorities in midwifery practice The examination does not, however, include gynaecology except in so far as it is directly associated with child bearing, and this diploma is not meant for those who aspire to hospital appointments with charge of gynaecological beds

The regulations governing the Membership and diploma may be obtained from the honorary secretary, British College of Obstetricians and Gynaecologists, 58, Queen Anne Street, London, W 1

SCOTLAND

THE UNIVERSITIES

There are in Scotland four universities each possessing a Faculty of Medicine and having the right to confer degrees which admit the holder to the *Medical Register* In essential points the regulations in their medical faculties for undergraduates are much alike so that a general account can be given of all of them together

The universities are those of St Andrews Glasgow Aberdeen, and Edinburgh The provision each of the cities in which these universities are situated makes for the education of medical students will be found in the section on Medical Schools in Scotland here it need merely be said that degrees in medicine from Scotland as a whole have always enjoyed a high repute

The degrees granted in medicine and surgery to candidates of either sex are four in number—Bachelor of Medicine (M B) Bachelor of Surgery (Ch B) Doctor of Medicine (M D) Master of Surgery (Ch M) The two former are not obtainable one apart from the other Besides these degrees a diploma in tropical medicine and *hygiene is obtainable from the University of Edinburgh as* also diplomas in psychiatry and medical radiology As for public health registrable degrees and diplomas in this subject are granted by the University of Glasgow while diplomas in public health may be obtained from the Universities of Edinburgh St Andrews and Aberdeen

The conditions for admission of graduating students of medicine are the same as those in the Faculties of Arts or Science Medical students are also required to pass a pre registration examination in chemistry and physics This is not enforced at Aberdeen or at St Andrews

Professional Education*

The regulations comply in all respects with the requirements and recommendations of the General Medical Council In respect of the various courses certificates must be obtained showing that the student has not only attended regularly but has duly performed the work of the class Out of the necessary five years of medical study not less than three (or in certain circumstances two) must be spent at the university whose degrees the student hopes to obtain and the balance at any place officially recognized for such purpose In each academic year there are two sessions—one lasting from the beginning of October to the middle of March and the other from the middle of April to the beginning of July

Professional Examinations

The distinctive feature of the Scottish curriculum is that though nominally there are only four examinations each of these may be, and habitually is split up by the student into sections Hence a student may complete some stage of his career during the course of nearly every session Thus by the end of the first winter session the student may pass in zoology† and chemistry‡ At the end of the first summer session he can finish with botany† and physics‡ and with anatomy and physiology at the end of the second Pathology and materia medica he may pass at the end of the third year and so on until the final examination in midwifery surgery and medicine and the corresponding clinical subjects at the end of the fifth year of study At each examination the candidate may pass with much distinction or with distinction — with merit in St Andrews—and a record is kept of the merit displayed so that when the time comes for the candidate to graduate one who has done well throughout can be declared as graduating with honours (In Glasgow Edinburgh and St Andrews a candidate may pass with distinction but there is no higher grade of much distinction) A further point in the system is that the student's own teachers commonly take some part in his examination

Of the four examinations the first deals with physics botany zoology and chemistry (inorganic and organic) the second with anatomy and physiology the third with materia medica therapeutics pathology and bacteriology the fourth with forensic medicine public health medicine surgery midwifery and gynaecology At Edinburgh the first two examinations are held three times a year except in chemistry and zoology in which subjects examinations are held only twice a year At St Andrews all four examinations are held twice a year and at Glasgow the first two are held twice a year and the third three times At Aberdeen degree examinations in all subjects are held twice a year

Exemption from the first professional examination may be obtained by candidates who have passed an arts science or medical degree examination in its subjects at any recognized university §

The Higher Degrees

It is open to those who are already M B Ch B to proceed either to the M D or the Ch M A candidate for the former must have been engaged for not less than one year in work in the medical wards of a hospital or in scientific research in a recognized laboratory or in the Naval or Military Medical Service or have been at least two years in general practice and must be at least 24 years of age A thesis on any subject not exclusively surgical must be submitted and the candidate is also examined in clinical medicine and, if desired (*or* in the case of Glasgow St Andrews and Aberdeen) in some one or other of its special departments The regulations for candidates for the Ch M are of a corresponding character a period of surgical work in a hospital or elsewhere being substituted for medical work and the thesis being on a surgical rather than a medical subject. An examination in surgical anatomy clinical surgery operative surgery and in some of the special departments of surgery is included

FEES

It is estimated that the class examination and other fees for the M B Ch B come altogether to about £265 the separate examination fees included in this calculation being as follows

	£	s	d
First Professional	9	9	0
Second Professional	7	7	0
Third Professional	6	6	0
Final	11	11	0

(At Glasgow the fees are respectively nine nine eight and seven guineas at St Andrews nine six nine nine respectively)

Re entry in any subject in which the candidate has failed entails a fresh payment of £1 1s (in St Andrews 15s for each subject in which he is re examined Candidates for the M D and Ch M pay £21 and on re-entry £5 5s

More detailed information with regard to the University of Edinburgh can be obtained from the *Medical Programme* price 6d (by post 7½d) which is published by Mr Thin 53 South Bridge Edinburgh or on application to the Dean of the Faculty of Medicine Information about Glasgow should be sought from the Registrar the University Glasgow With regard to Aberdeen application should be made to the Secretary of the University of Aberdeen In respect of St. Andrews information can be obtained either from the Secretary of the University or alternatively the Secretary of the United College St Andrews or the Secretary of University

*The medical curriculum in the Scottish universities is undergoing revision

† At St Andrews University botany and zoology may be taken at the end of the first winter term physics and chemistry at the end of the first year

‡ In the case of Glasgow these subjects—chemistry and physics—are transposed

§ This does not apply to the University of Aberdeen where the course in physics includes special instruction on the medical aspects of the subject Accordingly every student irrespective of whether he holds an arts or science pass in physics must take medical physics

College Dundee these being the two constituent colleges of the University of St Andrews

Finally, it should be mentioned that in connexion with all the Scottish universities there are valuable bursaries and scholarships some information as to which will be found in the article on Medical Schools

The Carnegie Trust

The following is a summary of the regulations made by the Carnegie Trust for the Universities of Scotland for assistance in the payment of class fees in the universities and extra-mural colleges of Scotland

Applicants must be over 16 years of age they must be of Scottish birth or extraction or have attended for two years, after the age of 14 at a school or institution under inspection of the Scottish Education Department Applicants so qualified who have been pupils of schools under the Scottish Education Department will be eligible for assistance in the payment of class fees if they have obtained the leaving certificate of the Department with a minimum, of three higher grade passes provided that it bears evidence of such preliminary education as is required by the universities for their graduating curricula, or that it has been supplemented by such passes either in the Scottish Universities Preliminary or other examination as will satisfy the above requirement of the universities before they begin their graduating curricula Where applicants have not been pupils of schools under the Scottish Education Department or where other good ground for not having obtained the leaving certificate can be shown, the Executive Committee has power to accept instead what it deems equivalent evidence of attainments provided that applicants will not be considered eligible who have not obtained three higher grade passes or who require to pass any further preliminary examination before they begin their graduating curricula No applicant in medicine is eligible for assistance until pre registration subjects have been passed at any centre where pre registration examinations are required

Applicants in the Faculties of Arts and Science must have had their course of study for each academic year approved by the University Adviser of Studies and all applicants must have passed the graduation examinations belonging to the previous stage of their curriculum before becoming eligible for assistance in the payment of fees of classes belonging to a further stage Beneficiaries must submit to the Executive Committee at the end of each session particulars as to their attendance and work any distinctions gained, and any graduation examination passed

The annual allowance towards payment of class fees offered to beneficiaries by the Trust in the Faculty of Medicine is £20 for four years in all £80 Any unexpended part of a grant will be carried forward to the succeeding year In combinations of Faculties the allowances available for beneficiaries are Arts and Medicine—two Arts grants of £9 and four Medicine grants of £20 in all £98, Science and Medicine—two Science grants of £18 and four Medicine grants of £20, in all £116

Applicants in writing for application forms (Carnegie Trust Merchants Hall 22, Hanover Street Edinburgh) must name the university and faculty in which they intend to study, and state whether they have previously obtained the benefits of the Trust Fully completed application forms must be lodged by new beneficiaries not later than October 20 for the winter session, and by former beneficiaries not later than October 25 Applications for the summer session must be lodged not later than May 10 Payments are made by means of fee coupons, and fees already paid are not refunded

THE SCOTTISH CORPORATIONS

There are three medical corporations in Scotland—the Royal College of Physicians of Edinburgh, the Royal College of Surgeons of Edinburgh, and the Royal Faculty of Physicians and Surgeons of Glasgow Their licences an be separately obtained only by persons who are lready in possession of a recognized qualification—in surgery in the case of the College of Physicians, and in medicine in the case of the College of Surgeons and the Faculty of Physicians and Surgeons of Glasgow All others must submit to the examinations held by the Conjoint Board, which the three corporations have combined to form Details concerning this Board and its component Colleges follow The conditions on which their higher qualifications are granted will be found set forth separately in connexion with each corporation

The Conjoint Board in Scotland

This body has charge of all questions connected with candidates for the Conjoint Licences of the Royal College of Physicians of Edinburgh, the Royal College of Surgeons of Edinburgh, and the Royal Faculty of Physicians and Surgeons of Glasgow Those finally approved by it are entitled to registration and to the initials denoting the Licences of the three bodies concerned—namely, L R C P Ed, L R C S Ed, and L R F P S Glas The Board requires all candidates to comply with the regulations of the General Medical Council It has an arts examination of its own, but is prepared to accept in its place any of the other educational tests approved by the General Medical Council All candidates must obtain registration with the General Medical Council

It is estimated that the total cost of lectures and fees for the Conjoint Licence is about £170 The separate examination fees are as follows First Second and Third Professional, £5 each, Final £15 On re entry for any of the first three examinations £3 and on re entry for the Final, £5 If the re entry is only in one or two subjects of the First, Second, or Third Examination the fees are smaller

Information concerning this Board should be sought either from Mr David Thomson, Solicitor 18 Nicolson Street Edinburgh or from Mr David Willox, Faculty Hall, 242 St. Vincent Street, Glasgow

Royal College of Physicians of Edinburgh

This College has three grades—Licentiateship, Membership, and Fellowship—all of which are open to men and women The regulations applying to candidates for the Licentiateship have already been generally indicated If desirous of receiving it apart from those of the other two corporations, they must be duly registered medical practitioners Candidates will be required to pass an examination corresponding to the medical part of the final examination of the Conjoint Board, and conditioned in the same way, and also an examination in materia medica The fee for examination is 15 guineas, a special examination being obtainable on due cause being shown, and on payment of 5 guineas extra Ordinary examinations take place monthly on the first Wednesday and Thursday, except in September and October

Candidates for the Membership must be either Licentiates of a British or Irish College of Physicians, or alternatively graduates of medicine of a university approved by the Council, and in either case not less than 24 years of age Candidates are examined in medicine and therapeutics, also on one or more departments of medicine specially professed, and approved by the Council, in which a high standard of proficiency will be expected The fee to be paid by a candidate for the Membership is £36 10s The examination is held quarterly, on the second Tuesday and following days of the months of January, April, July, and October, and application for admission to it must be made a month previous to the date at which it is proposed to appear

For the Fellowship the Candidate must have been a Member of the College for at least three years, and if accepted, pay fees, including £25 stamp duty, amounting altogether to £64 18s Further details can be obtained on application to the Secretary of the College

Royal College of Surgeons of Edinburgh

This College has two grades—its Licence and its Fellowship Licentiates may be of either sex, and for the Fellowship women are eligible also

Licence

As an original qualification the Licence is only granted after fulfilment of the regulations of the Scottish Conjoint Board but as an additional qualification it can be obtained by those already possessed of a registrable or equivalent qualification in medicine In this case the candidate has to pass a written oral and clinical examination in surgery and surgical anatomy and may be asked to operate on the dead body

The fee is £15 15s of which £10 10s is returned to unsuccessful candidates

Fellowship

Candidates for the Fellowship must be not less than 25 years of age and have been in the practice or study of their profession subsequent to qualification for at least two years and must hold either a surgical degree from a university recognized for that purpose by the College, or a registrable diploma obtained as the result of an examination which includes surgery as well as medicine and midwifery Candidates are examined in (*a*) the principles and practice of surgery including surgical anatomy, (*b*) clinical surgery and (*c*) one optional subject which they may choose from among the following surgical pathology and operative surgery ophthalmology laryngology otology and rhinology gynaecology, obstetric surgery, anatomy and dental surgery and pathology The examination is written oral, and clinical or practical A candidate who desires to be examined must give one month's notice After having passed the examination he must lodge with the Clerk to the College a petition asking that his name be placed before the College for election as a Fellow This petition must be signed by two Fellows as proposer and seconder who should be sufficiently acquainted with the candidate to vouch that he is in every way a suitable candidate for the Fellowship Examinations are held four times a year—January March July and September It is desirable that either the proposer or the seconder should be resident in Edinburgh Candidates are not allowed to appear more than three times at the examinations unless by express permission of the President's Council

The admission fee is £20 and after passing the examination the candidate shall pay the sum of £30 to the College funds In the case of Licentiates of the College £10 thereof shall be remitted in consideration of the fees they have already paid For further information application should be made to the Clerk of the College Mr David Thomson Solicitor Surgeons Hall 18 Nicolson Street Edinburgh from whom a copy of the *Laws Relating to the Fellowship by Examination* may be obtained

Royal Faculty of Physicians and Surgeons of Glasgow

The Royal Faculty of Physicians and Surgeons grants, after examination a Fellowship which is registrable by the General Medical Council as an additional qualification For the Fellowship *qua* physician or the Fellowship *qua* surgeon the candidate must pass in medicine or surgery as the primary subject and an additional subject cognate with medicine or surgery respectively must also be taken at the same examination Candidates are required to be approved by the Council before admission to the examination Successful candidates are later balloted for election by the Faculty and, if elected are duly admitted *qua* physician or *qua* surgeon The fee for admission to the Fellowship is £50 or for Licentiates of the Faculty £40 Examinations are held quarterly

The Faculty grants after examination a single licence Candidates for admission to the examination for the single licence must produce satisfactory evidence that they are in possession of a medical qualification registrable in the British *Medical Register*

The regulations respecting the Fellowship together with the dates of the Examinations may be obtained on application to the Secretary Royal Faculty of Physicians and Surgeons 242, St Vincent Street, Glasgow, C.2

IRELAND

MEDICAL REGISTRATION IN EIRE

The Medical Practitioners Act 1927 (Irish Free State) provided for the establishment of a medical Registration Council for the Irish Free State The main functions of the Council are (1) to keep a register of medical practitioners who may desire to practise permanently or temporarily in the Irish Free State, and (2) to exercise disciplinary power with regard to all medical practitioners who are on the *Register* and engaged in practice in the Irish Free State The first schedule of the Act contains the agreement between Great Britain the Irish Free State, and Northern Ireland This agreement provides for the nomination of a member of the General Medical Council formerly made for Ireland by His Majesty on the advice of the Privy Council to be made henceforth by His Majesty in Council on the recommendation of the Governor of Northern Ireland The nominations of members of the General Medical Council by universities and medical corporations in Ireland and the election of a member of the General Medical Council by registered medical practitioners in Ireland will be in all respects the same as heretofore The constitution of the General Medical Council and of the several Branch Councils as formerly existing under the Medical Acts, and the powers of holding qualifying examinations and granting diplomas for the purpose of registration in the general *Register* formerly vested in certain universities and medical corporations in Ireland are not affected by the establishment of the Irish Free State or of Northern Ireland and for the purpose of the preparation and keeping of the general *Register* the General Medical Council and the Branch Council for Ireland have the same powers and jurisdictions under the Medical Acts as they exercised formerly The agreement provides also that any person who is or shall be registered in the general *Register* shall be entitled on the payment of a prescribed fee to be registered in the *Irish Free State Register* but this fee is not payable by any person who on the date of the establishment of the *Irish Free State Medical Register* is registered on the general *Register* Then follow provisions with regard to the erasure from the *Register* of the name of a person on account of misconduct

The *Irish Free State Medical Register* was established on May 26 1928 this being the date appointed by the Medical Registration Council The *Register* on establishment contained the name of every medical practitioner who was registered in the general *Medical Register* immediately before May 26 1928 and who either was then resident in the Free State according to his address as stated in the general *Register* or was living outside the Free State and applied to the Council within one month before May 26 1928 to be registered No fee for registration was charged in such cases

For registration in the *Irish Free State Medical Register* subsequent to its establishment a fee is required together with a prescribed form of application A person is eligible for registration if he is at the time of application registered in the general *Medical Register* or if he possesses the requisite qualifying diploma granted by the colleges or bodies in the Free State as set out in the Act Candidates for medical appointments made under the Appointments Commission must be registered in the *Irish Free State Medical Register* Application for further information may be made to the Registrar Medical Registration Council, Room 35 Upper Fitzwilliam Street, Dublin

THE IRISH UNIVERSITIES

There are three universities in Ireland each with a medical faculty These are in Eire the University of Dublin (usually known as Trinity College Dublin) and the National University of Ireland and, in Northern Ireland, the Queen's University of Belfast.

and other licensing bodies "A particular feature of the school is that, by limiting the number of admissions to thirty students a year, they are in constant and intimate contact with the staff throughout the clinical period The "firms" have no more than five clerks or dressers, and each student has the care of not less than six beds The policy of the School is to concentrate on undergraduate teaching Every student during the course of his clinical studies is appointed to the offices of medical clerk or surgical dresser in medicine, surgery, midwifery, and gynaecology for six months each in pathology for three months and in the special departments for seven months In addition to the clinical appointments, each student attends the courses of systematic lectures demonstrations, and tutorial classes held in all subjects of the curriculum In the School there are departments devoted to bacteriology clinical pathology, biochemistry, materia medica public health, operative surgery as well as laboratories for research By reason of the abundance and variety of the material available for investigation, the Institute of Pathology offers peculiar advantages to students in this branch of medicine The Library has ample accommodation, and contains over 4 000 volumes The Pathological Museum is organized in two sections one devoted to specimens illustrating general conditions, the other consisting of the Lockyer Collection, one of the finest collections of gynaecological and obstetrical specimens in the country

The hospital contains 300 beds Of this number ninety-three are allocated to medical cases ninety-two to surgical, and forty one to obstetric and gynaecological The remainder are distributed between the special departments There are special departments for diseases of ear, nose, and throat, the eye, the skin, for children, for mental disorders and psychological medicine, for orthopaedic surgery and massage, for x-ray, electrical, and light treatment, for dental surgery, and for tuberculous and diabetic cases In addition to the number of beds set apart for diseases peculiar to women and for midwifery cases, the hospital serves an extensive and thickly populated district in gynaecological and obstetric work The last department to be opened is the fracture clinic It is held daily at 9 a m, and one of the two honorary officers in charge is always in attendance The radiology department has been provided with new accommodation and has been completely re equipped with the most modern apparatus at a cost of over £10 000 In-patients numbered 4,947 last year, and the out patient department dealt with 33,226 new cases Out-patient attendances totalled 161,434

The Students Club provides for the athletic, recreational, and social life of the students by means of an 8-acre sports ground with facilities for football cricket hockey, tennis and badminton by common rooms restaurant etc and by sections of the club designed for a particular purpose, such as the debating society and the dramatic society The new permanent brick-built pavilion erected at a cost of £5 000, is equipped with every modern convenience including thermostatic control to the showers and an oak over floor for dancing in the large tea room

Appointments—The number of resident appointments as compared with the number of students in the School is exceptionally large and students of reasonable ability and industry can usually be certain of obtaining one or more The resident appointments to which election is made every six months number 27 in every year During the time an appointment is held the officer receives a salary and he is provided with free board and accommodation in the Residency of the hospital In addition to the foregoing two non resident officers and a number of clinical assistants are appointed annually Higher appointments—Annual election is made to the posts of resident medical officer (£400) resident casualty officer (£200) medical registrars (two £150 each) surgical registrars (two £150 each) obstetric registrar (£100) registrar to the ear nose and throat departments (£100) and a cancer and radium registrar (£100) The holders of these posts are eligible for election for a second year

Scholarships—The following are offered annually (*a*) For students beginning medical studies three scholarships each of the value of £65 (*b*) For students beginning clinical studies one University Scholarship of the value of £120, in pathology one University Scholarship, value £120 and one Open Scholarship, value £75 in anatomy and physiology An "Epsom College" Scholarship (£100) is awarded periodically on the nomination of the Head Master and a Cranleigh Scholarship on similar conditions In addition there are a number of exhibitions (value, first year £225 second year £275) A studentship in pathology after qualification, tenable for two years during first year Diploma in Bacteriology may be taken

Prizes—(1) The Llewellyn Prize (£25) and the Llewellyn Certificate of Merit (with £10) for highest distinction through out final course of studies (2) Williams Travers Prize £15 midwifery and gynaecology (3) Pereira Prize, £5 5s, clinical commentary (4) T H Green Prize £5 5s clinical commentary (5) Clinical Surgery Prize £3 3s (6) Clinical Medicine Prize, £3 3s (7) John H Morgan Prize £10 (8) Dr H W C Vines Prize in Pathology £5 (9) Steadman Prize in Pathology £2 2s (10) Dr Russell Reynolds Prize in Radiology £5 (11) The Governors Clinical Gold Medal (12) Class Prizes of £2 2s each in Hygiene and Public Health, Ophthalmology Oto laryngology Psychological Medicine Midwifery, Practical Midwifery, Gynaecology, and Pharmacology and Therapeutics

Fees—The fees are as follows Entrance fee £10 10s, annual fee 38 guineas Annual subscription to Students' Club, £4 4s

Male students only are admitted

Further information may be obtained on application to Eric A Crook, M Ch F R C S Dean of the Medical School, Charing Cross Hospital, London W C 2

Guy's Hospital

The hospital contains 691 beds in constant occupation, of which 621 are available for teaching There are special wards for the reception of cases of diseases of women and for cases of difficult labour, and beds are also allotted to the ear, nose, and throat department, the departments of orthopaedics, ophthalmology, psychological medicine, neurology, and dermatology, the department for the treatment of diseases of the genito urinary system, and the children's department, there are also some special beds for the treatment of venereal diseases

The residential college fronts the east gate of the hospital, providing accommodation for resident students This contains a dining hall, smoking room, reading room, a library of general literature, and a gymnasium for the use of the residents and members of the Clubs Union The athletic ground at Honor Oak Park is reached from the hospital in fifteen minutes The Gordon Museum of Pathology, the Wills Library, the departments of chemistry, physics, biology, anatomy, physiology, pathology, and pharmacology, and the school buildings in general, all of which have been built or reconstructed in recent years, afford opportunities for a liberal education and provide the full curriculum for all medical degrees and diplomas Ample accommodation is provided for research Special classes are held for the first and second examinations for medical degrees of the University of London, for the first and final F R C S Eng examinations, and for the Diploma in Anaesthetics Special teaching is also provided to meet the requirements of the Universities of London, Oxford, and Cambridge in general pathology and pharmacology

Appointments—All appointments are made according to the merits of the candidates, as determined by a committee of the medical staff Sixteen out-patient officers, eight house physicians, eight house surgeons sixteen assistant house surgeons, two ophthalmic house surgeons two house surgeons in the genito urinary department two house surgeons in the orthopaedic department two house-physicians (children's department) two house physicians (dermatological and neurological) four house surgeons in the ear nose, and throat department nine resident obstetric assistants, and twenty four assistant house physicians are appointed annually The house physicians and house surgeons, obstetric residents, ophthalmic orthopaedic, genito urinary, and ear nose and throat house-surgeons hold office for six months each and receive free board and lodging in the college Every student is provided

with rooms and commons in the hospital during the period of his take in as senior dresser In addition to the clerkships and dressership in the medical and surgical wards students are appointed to the posts of dresser or clerk in the special departments of ophthalmology ear nose and throat gynaecology diseases of children diseases of the nervous system dermatology actinotherapeutics anaesthetics orthopaedics vaccine tuberculosis genito urinary and venereal disease clinical assistantships in the various special departments are open to postgraduates

Scholarships Prizes etc—The following scholarships in Arts and Science are awarded A Open Junior Scholarships (1) An Arts Scholarship of the value of £100 (2) a Science Scholarship of the value of £100 these are awarded annually in April (3) A War Memorial Scholarship of the value of £200 awarded alternately in Arts and Science This scholarship is open every other year the next award will be made in April 1940 (in Arts) B Confined Scholarship in Science A Junior Science Scholarship of the value of £100 is offered for competition annually to candidates who have attended the preliminary science classes at this school This scholarship is awarded on the results of the first M B London Examination held in July For the Arts Scholarship candidates must be under 19 years of age on August 1 of the year of the competition and for the Open Junior Science Scholarship candidates must be under 20 years of age on August 1 of the year of the competition A confined scholarship is also awarded to a boy who has received his general education at Epsom College C University Entrance Scholarships (1) A War Memorial Scholarship entitling the holder to free medical education for three years (2) an exhibition of the value of £60 both of these are awarded annually in June or July Candidates will be examined in two of the following subjects at their option (1) anatomy and embryology (2) physiology (3) pathology including bacteriology (4) organic chemistry The examination is held in common with the Medical School of St Thomas's Hospital and the Medical College of St Bartholomew's Hospital *Prizes* Junior prizes for general proficiency £20 £15 £10 Hilton Prize for dissection £5 Michael Harris Prize for anatomy £10 Sands Cox Scholarship for physiology £15 for three years (awarded triennially) Wooldridge Memorial Prize for physiology £10 Beaney Prize for pathology £34 Treasurer's Medal and Prize in medicine Treasurer's Medal and Prize in surgery Golding Bird Gold Medal and Scholarship for bacteriology (£29) Golding Bird Gold Medal and Prize (£29) in obstetrics and gynaecology, Charles Oldham Prize in neurological aspects of ophthalmology (£30) Charles Oldham Prize in ophthalmology (£30) the Charles Forster Prize Edgcumbe Prize (books to the value of £3 10s) awarded annually to the student who is placed *proxime accessit* for the Confined Junior Science Scholarship and the Leonard Lubbock Prize in Clinical Pathology (£10) are awarded annually after competitive examination Two scholarships each of the value of £50 have been instituted to enable students to work for the London University B Sc Special Examination (anatomy or physiology) for one year after passing the Second M B Examination Part II During the period of study for the B Sc degree the ordinary tuition fees are waived *Studentships* The following studentships are open to graduates from this school (1) Gull Studentship in pathology of the value of £250 per annum (2) Beaney Scholarship in materia medica of the value of about £60 per annum (3) Anderson Demonstratorship in clinical chemistry value £60 per annum (4) Arthur Durham Travelling Scholarship of £150 awarded triennially (5) Griffiths Demonstratorship in pathology of the value of £320 per annum (6) Hilda and Ronald Poulton Fellowship value £150 per annum (7) Adrian Stokes Fellowship in pathology and bacteriology value £200 awarded biennially (8) Fripp Memorial Fellowship value £300 per annum

An annual composition fee is paid by all students until a registrable qualification is obtained Further information may be obtained from the Dean of the Medical School Guy's Hospital London Bridge, S E 1

King's College Hospital

The New Medical School at Denmark Hill opened in July 1933 contains the museum, research laboratory research rooms common rooms lecture rooms refectory and two squash rackets courts Provision is made for all the subjects of the medical curriculum The hospital was opened in 1913, and is easily reached from all parts of London In the education at the hospital a special feature has always been the individual attention given to each student The studies are co-ordinated under the direction of senior members of the honorary staff assisted by medical surgical, obstetric and pathological tutors

The Hall of Residence for members of the medical school is situated on Champion Hill Both the Hall and the athletic ground are within ten minutes walk of the school

The Clubs and Societies Union combines athletics music and other societies connected with the school and provides also the common rooms

Appointments—Thirty one resident medical and surgical appointments are made during each year as well as dressers and clerks in the wards out patient departments post mortem rooms and special departments Each of the special departments has clinical assistants There are eight registrars and four tutors all of whom receive salaries

Scholarships etc—At entrance Science Scholarship £100 At commencement of Final Studies Anatomy and Physiology Scholarship £100 Pathology Scholarship £100 two Raymond Gooch Scholarships each £105 two Burney Yeo Scholarships each £105 (for Oxford and Cambridge students) Seamen Scholarships £50 a year Epsom College Scholarship £100 Senior Scholarship £40 Todd Prize Tanner Prize Chevne Prize Legg Prize Ware Prize Ferrier Prize in Neurology Class Prizes and Medals

Fees—The inclusive fee of £130 covers entrance and tuition fees and subscriptions to the clubs and societies

Dental School—This school was opened in October 1923 and in conjunction with King's College provides complete courses for dental degrees and diplomas

The calendar of the school can be obtained on application to the Dean John B Hunter M C M Chir F R C S or to the Secretary of the Medical School S C Ranner M A. King's College Hospital Denmark Hill S E 5

The London Hospital

The London Hospital serves the East End of London and with 885 beds is the largest voluntary hospital in England Students have the choice of five medical and five surgical firms Each firm consists of two physicians or surgeons a registrar, a house physician or house surgeon about fifty beds and seven clinical clerks or dressers The number of students admitted each year is limited so as to ensure that every student shall have an average of seven or eight beds allotted to him when acting as a clerk or dresser The out patient department deals with a hundred thousand new patients per annum, and is extensively used for teaching Three wards devoted to maternity and gynaecological cases the district served by the hospital and the neighbouring County Council maternity centre for East London afford exceptional opportunities for gaining experience in the practice of midwifery The size of the hospital necessitates a large number of resident medical officers Every year seventy resident house physicians and house surgeons and eighty salaried non resident clinical assistants are appointed As the school is relatively small the chances of a student gaining some of these appointments are considerable The honorary visiting staff numbers over fifty All take their part in teaching The work of the hospital never stops, and at the London a student can gain a wealth of clinical experience and obtain a variety of clinical teaching which cannot be surpassed

The Medical College is attached to the hospital and is staffed by professors of anatomy physiology, bacteriology chemical pathology morbid anatomy and medicine of the University of London Special courses in anatomy and physiology for the Primary F R C S and advanced courses in surgery for the Final F R C S examination and in medicine for the M D and M R C P examinations are held twice a year

Scholarships and Prizes—The following is a list of scholarships and prizes —At entrance Price Scholarship in science £100 Two open scholarships each of the value of £100 A Scholarship open to students of Oxford and Cambridge Universities £100 anatomy and physiology Epsom Scholarship free medical education After entrance Buxton Prize in

anatomy and physiology, £40 Letheby Prizes in organic chemistry and chemical pathology, £25 H L B Hiking Prize in clinical obstetrics and gynaecology £25 Duckworth Nelson Prize in practical medicine and surgery £10 Hutchinson Prize in clinical surgery £60 Treves Prize in clinical surgery £20 Sutton Prize in pathology £20 Sir Andrew Clark Prize in clinical medicine and pathology £14, T A M Ross (*prov acc*) Prize in clinical medicine and pathology £10 10s, Anderson Prizes in elementary clinical medicine £20 Dressers Prizes £20 the F N Charrington Prizes in practical anatomy £25 Arnold Thompson Prize in medical and surgical diseases of children £15 Liddle Prize, £120, Francis Farmer Entrance Scholarship in biology chemistry, and physics, £25 Harold Fink Prize in dental surgery, £8 8s The London Prize in dental prosthesis, £6 6s Six class examination prizes of the value of £3 3s to £5 5s are offered for competition at the end of the courses of lectures in the dental curricula Funds to the value of over £113 000 permit of financial assistance being given to students and graduates engaged in medical research

The Medical College contains a modern museum of pathology and a library provided with all the current medical periodicals in charge of a full time librarian There is also an Athenaeum Club and dining hall a gymnasium a fives court and two squash courts in the students hostel The athletic ground of 13 acres at Hale End is within easy distance of the hospital Although situated in the East End the hospital is only twenty minutes from Charing Cross and Baker Street There is accommodation for seventy five students in the students hostel

Further details may be obtained from the Dean Dr A E Clark Kennedy F R C P, physician to the hospital, who is always pleased to meet students wishing to see the hospital and college Application for admission should be made to the Dean Turner Street, London E 1

The Middlesex Hospital

The school and hospital are in Mortimer Street, W 1, close to Oxford Circus, Goodge Street, and Great Portland Street stations There are a gymnasium, squash rackets court, common rooms, and restaurant within the hospital precincts, and an athletic ground within easy reach The hospital contains 602 beds, including a wing containing beds for patients suffering from cancer There are special wards for maternity and gynaecological cases, for neurological cases, for cases of venereal disease, for diseases of children and of the skin and eye, for ear, nose, and throat cases, and for dental cases The hospital has been entirely rebuilt, and includes a new house for resident officers

The medical school, which includes the Bland-Sutton Institute of Pathology, the S A Courtauld Institute of Biochemistry, the Barnato Joel Laboratories, and the Ferens Institute of Otology, is completely equipped for teaching the entire medical curriculum, including the pre-medical subjects, chemistry, physics, and biology The Bland-Sutton Institute, under the direction of the Professor of Pathology, contains large pathological laboratories, and smaller rooms for original investigation, as well as a pathological and anatomical museum Bacteriological and microscopical examinations of material from the wards, operating theatres, and out-patient departments are carried out in the laboratories, and senior students are eligible for clerkships in connexion with this work Junior assistants in the pathological and bacteriological laboratories are elected annually from recently qualified students Every facility is given for original research The Courtauld Institute of Biochemistry is under the charge of the Professor of Biochemistry, and contains teaching and research laboratories in addition to those devoted to the routine chemical pathological work of the hospital The Barnato-Joel Laboratories offer unrivalled opportunities for the study of cancer in both its clinical and its pathological aspects

Appointments.—Thirty-seven resident appointments are open annually for competition among students of the hospital Three casualty medical and two casualty surgical officers and four resident officers to the special departments are appointed annually Ten house surgeons are appointed every year at intervals, after examination eight house physicians are also appointed annually at similar intervals An obstetric and gynaecological house surgeon is appointed every six months, and two orthopaedic house surgeons and one senior and two junior resident assistant anaesthetists are appointed annually A dental house surgeon is appointed every eight months Eleven registrars each at a salary of £300 per annum, are appointed annually, and one half time dental registrar at £150 In the out patient departments and wards the appointments are clerk and dresser to the physicians and surgeons to out patients, clerk or dresser to the department for diseases of the skin and nerves, for diseases of women for diseases of the ear nose, and throat, for diseases of the eye, and to the departments for orthopaedics and for odontology Extern midwifery clerks and post mortem clerks are also appointed, every student secures six months' experience in midwifery and gynaecology without leaving London The appointments are so arranged that every student may during his course hold all the out patient and in patient clerkships and dresserships Non resident qualified clinical assistants are appointed to the medical and surgical departments and also to the following departments neurology, ophthalmology, otology odontology children and electrotherapeutics

Scholarships.—There are two open Entrance Scholarships value £100 each Two scholarships, of the value of £100 each, for students of the Universities of Oxford and Cambridge who have completed the curriculum for, or passed the examinations in anatomy and physiology Students joining the school in the previous April are eligible In addition there are two scholarships, value £100 each open to students of the school when they have passed in anatomy and physiology The Freer Lucas Scholarship is annually awarded on the nomination of the Head Master to a pupil of Epsom College who has passed the first examination for medical degrees (Preliminary Scientific Examination) There are numerous other valuable scholarships prizes, and exhibitions open to students of the hospital, including the Broderip Scholarships value £60 and £40 Lyell Gold Medal and Scholarship, value £55 5s, Freeman Scholarship, value £30, John Murray Gold Medal and Scholarship, value £25, Hetley Clinical Prize, value £25 James Kingston Fowler Prize, value £15 15s Leopold Hudson Prize, value 11 guineas, and the Colin Mackenzie Prize, value 10 guineas

The rebuilding of the hospital has been completed

Fees.—(*a*) Entrance fee 25 guineas, payable on joining the medical school Pre medical students For one year or less, £21 (*b*) Students who have completed the Preliminary Science course Five annual fees of £45 The annual fee for further attendance at the medical school, if a registrable qualification has not been obtained is £23 (*c*) Oxford and Cambridge and other students who have completed the Intermediate course entrance fee, 15 guineas, three annual fees of £45, further annual fees as above These fees are inclusive and cover the cost of instruction in vaccination fevers etc and also the subscription to the amalgamated clubs and hospital journal

Further information may be obtained from the Dean or the School Secretary

St Bartholomew's Hospital

This institution fills one side of Smithfield and Giltspur Street, covering the greater part of a large island of ground separated practically from all other buildings, it is on the edge of the City, and easily reached from all parts of London The hospital contains 775 beds Extensive buildings, opened in July, 1907, occupy part of the ground acquired from the old Bluecoat School, and these materially enhance the attractions of the hospital as a place of medical study The old medical school buildings have at their side a very large building, which includes quarters for the resident staff, and an out patient department and accommodation for special departments During the year 1909 a second block of new buildings was completed These form the pathological department, and include, in addition to an extensive post mortem room, large and well-equipped laboratories for clinical pathology, pathological histology, bacteriology, and chemical pathology A new block of surgical wards and five operation theatres (one attached to each surgical unit), with accommodation for 250 patients, was opened in June, 1930 A similar new block of medical wards, erected on the site of the old South Block, was opened in

July 1937 One of the old blocks previously used for surgical cases has been reconverted for the housing of an enlarged gynaecological and obstetrical unit, with separate operation theatres attached sixty obstetrical beds have been provided The Students Union Athletic Ground, seventeen acres in extent is situated on the Foxbury Estate at Chislehurst and is easily accessible from the hospital

The Medical College has recently purchased the site and buildings in Charterhouse Square (five minutes walk from the hospital) formerly occupied by the Merchant Taylors School and the whole of the pre clinical departments have now been transferred there Various athletic amenities including squash rackets courts, are available on this new site

Special classes are held for students preparing for the Preliminary Scientific and other examinations for the M B M D of the Universities of Oxford Cambridge and London and for the higher surgical degrees at the same universities including the M Ch Oxon, M Chir Cantab M S Lond and F R C S Eng

Clinical Units—Special clinical units have been established in medicine and surgery each under the charge of a professor and director who devotes the whole of his time to the purpose of hospital practice teaching and research In each unit there are an assistant director and four assistants for whom special laboratory accommodation has been provided The appointments of clerks and dressers in these departments are open to all students and so far as possible arrangements are made for all students to study in these units during a part of their clinical course

Appointments—Clinical clerks to the physicians and to the physician accoucheur and dressers to the surgeons and in the casualty department are chosen from the students clerks and dressers are also selected from the students to attend in the out patient rooms in the special departments (ophthalmic orthopaedic gynaecological children's laryngological aural dermatological venereal electrical and dental) and in the post mortem room Chief assistants and clinical assistants are selected from qualified men appointed yearly to help in the general medical surgical and in special departments Ten house physicians and ten house surgeons are appointed annually During their first six months of office they act as junior house physicians and house surgeons and receive a salary of £80 a year During their second six months they become senior house physicians and house surgeons and are provided with rooms by the hospital authorities and receive a salary of £80 a year Five casualty house physicians and five casualty house surgeons are appointed every three months A resident midwifery assistant an ophthalmic house surgeon a house surgeon to the skin and venereal department and a house surgeon for diseases of the throat nose and ear are appointed every six months and are provided with rooms and receive a salary of £80 a year Three resident administrators of anaesthetics are appointed—the senior for one year at a salary of £150 and two juniors for six months with a salary at the rate of £80 per annum—and all are provided with board and rooms An extern midwifery assistant is appointed every three months and receives a salary of £80 a year In the selection of men for these posts preference is given to those who hold the medical degrees of Oxford Cambridge, or London

Scholarships—Seven Entrance Scholarships and Exhibitions are awarded annually The subjects of examination and conditions of eligibility for these scholarships are (1) and (2) one scholarship entitling the holder to free undergraduate medical education for a period of three years and one exhibition value £60 in any two of the following subjects human anatomy and embryology physiology pathology (including bacteriology) biochemistry Candidates must have completed their examinations in anatomy and physiology in a British school or university outside the London metropolitan area (3) One scholarship value £100 in the three following subjects chemistry, physics biology limited to students under 21 years of age who have not entered on the medical or surgical practice of any London medical school (4) An entrance scholarship in arts of the value of £100 in mathematics Latin or Greek or French or German a second language or chemistry or physics (5) The Jeaffreson Exhibition in the same subjects as No 4 of the value of £50 Candidates for Nos 4 and 5 must be under 19 years of age (6) Helen Cave Memorial Scholarship awarded after open competition to sons of registered medical practitioners value about £200 conditions obtainable from the Dean (7) The Shuter Scholarship value £50 in anatomy and physiology is confined to Cambridge graduates The total value of the scholarships and prizes is about £1 900 annually

Further information and a handbook can be obtained on application to the Dean of the Medical College St. Bartholomew's Hospital E C 1

St George's Hospital

This School is at Hyde Park Corner and is carried on in connexion with St. George's Hospital an institution having a service of 436 beds of which 100 are at the convalescent hospital at Wimbledon It provides for the instruction of its students in the preliminary and intermediate subjects of the curriculum at King's College in the Strand The school at Hyde Park Corner is devoted entirely to the teaching of clinical subjects great attention being paid by the members of the staff to individual teaching A number of special courses are given in which the requirements of university and all other examinations receive careful attention

The St George's Hospital Club consists of an amalgamation club, with smoking and luncheon rooms on the hospital premises and other students clubs with an athletic ground at Wimbledon Students have the advantage of a well filled library of medical and scientific books A register of accredited apartments and a list of medical men and others willing to receive St George's men as boarders may be seen on application to the Dean

Appointments—Eight casualty officers ten house surgeons and ten house physicians are appointed annually They are provided with board and lodging in the hospital and receive honoraria of £40 per annum In addition the following appointments are open to all qualified students of the hospital assistant resident physician at £250 per annum two surgical chief assistants at £200 per annum medical officer to the Atkinson Morley Convalescent Hospital at £300 per annum two medical registrarships at £100 per annum medical officer to the biochemical department at £100 per annum assistant curatorship of the museum £100 per annum obstetric assistantship resident at £100 per annum the post of resident anaesthetist at £100 per annum

Scholarships—The following Entrance Scholarships and Exhibitions in anatomy and physiology and in general pathology are awarded in July to candidates who have passed the second M B London or corresponding examination Senior William Brown Exhibition of the value of £120 Junior William Brown Exhibition of the value of £80 Anne Selina Fernee Scholarships (two) of the value of £80 each Anne Selina Fernee Exhibitions (two) of the value of £60 Devitt Pendlebury Scholarships of the value of £50 and Exhibitions each of the value of £40 and up to four in number Other prizes to the value of £200 are awarded annually to the students of the hospital

Fees—For the course of clinical study in the fourth and subsequent years entrance fee £10 10s annual composition fee £42 No entrance fee is payable by St George's students who have studied at King's College

Further information may be obtained from the Dean of the Medical School.

St Mary's Hospital

St Mary's is exceptional in its situation for while it is adjacent to a large poor district in which it serves some 300 000 persons one tenth of whom (on an average) pass through the hospital annually for treatment of one kind or another it is nevertheless so near to Kensington Gardens and one of the best residential districts of London that it offers to the medical student the unusual possibility of living in close touch with his work without a wearisome journey in an overcrowded train or tube As a direct outcome of this social life among students is closer than is possible where the members of a school live scattered in many parts of London and its suburbs

Approximately £250 000 has been spent in rebuilding the medical school and laboratories upon a site adjoining the hospital The new buildings were formally opened by his late Majesty King George V, accompanied by

Queen Mary Apart from the laboratories, class rooms, and theatres for all the subjects in the curriculum, they include a library, restaurant, students' club, billiard room, full-sized swimming bath, squash rackets court, gymnasium, boxing ring, and an underground garage for fifty cars

The principle underlying the clinical teaching is to encourage the student, under supervision, to carry out for himself the various methods of clinical investigation and treatment This is secured by the provision of a very large number of appointments, and by developing the system of clinical clerkships and assistantships Large classes are avoided whenever possible and the intimate association between staff and student has been reinforced by the institution of Clinical Units St 'Mary's is one of the three medical schools in London to enjoy the great advantages in teaching and research which these units confer The clinical material is exceptional A new block has recently been added containing two operating theatres and 75 beds Owing to affiliation with adjacent hospitals, more than 1,000 beds are now available for teaching There are lying-in beds at St Mary's, with upwards of 500 confinements yearly, and in addition to the instruction thus obtained each student is sent (without further fee) to Queen Charlotte's Hospital as part of his training in midwifery

Students especially interested in pathology and bacteriology have singular advantages at St Mary's The institute comprises seven special departments, the whole being under the personal direction of Sir Almroth Wright Two Research Studentships of £200 each are awarded annually

From three to five Entrance Scholarships are awarded annually by nomination Full particulars may be obtained from the School Secretary, St Mary's Hospital, Paddington, W 2 Numerous appointments are open to newly qualified members of the medical school, including seventeen salaried posts with salaries varying up to £750 per annum

The Old Merchant Taylors ground (13 acres) has been acquired, being on sand, it remains dry throughout the winter

St Thomas's Hospital

The Hospital and Medical School are situated along the Albert Embankment between Westminster and Lambeth Bridges The buildings form one of the most striking architectural features of London, opposite the Houses of Parliament, with Lambeth Palace and the beautiful grounds adjoining immediately to the east

The hospital consists of eight linked-up pavilions, the Medical School buildings being separated from the hospital by a quadrangle, they comprise a magnificent Department of Anatomy with its own lecture theatre, museums, research laboratory, and x-ray department, the School of Physiology, named after Sir Charles Sherrington, O M, completely equipped for teaching and research, a newly rebuilt Department of Chemistry with special facilities for research, Physics and Biology Laboratories - The school buildings contain also the library and reading room, which overlook the river and contain approximately 8,000 volumes, also an excellent supply of periodical literature adapted to the needs of medical students and research workers The Museum, named after Professor S G Shattock, is also situated in the School, it contains nearly 5,000 preparations In the west wing are the Pathological Institute and the Photographic Department The post mortem room was entirely rebuilt in 1932, it is a model of its kind, with a large demonstration amphitheatre which is perfectly adapted for teaching purposes and for the intimate study of morbid pathology

The complete curriculum is provided for students can join the Medical School directly after passing the requisite examination in general education and proceed at once to the study of the first M B pre medical subjects which are taught by experienced professors and lecturers with the assistance of full time demonstrators Most students, particularly those entering for the first M B pre medical examination enter in October, but the clinical studies are arranged in three monthly periods, and students can join at any time of the year for clinical studies Classes for the Primary F R C S are held before each examination these classes are held in conjunction with St Bartholomew's and Guy's, three to four weeks special teaching being arranged by each of the three Schools in turn Instruction in the psychology of the normal is given during the later periods of pre clinical studies Classes in pharmacology and materia medica and pharmacy cover the requirements of all the examining bodies

Clinical Studies—The hospital contains 640 beds, in addition it has 30 beds (with teaching facilities over a further 150) at the Pyrford Orthopaedic Hospital, and 22 beds at the St Thomas's Babies' Hostel in Lambeth During 1935 the number of patients admitted into the hospital was 11 814, during the same period 99 341 out-patients were treated In the Maternity Department 2 238 women attended, 643 were admitted into the special maternity ward and 383 were delivered in the district Casualties to the number of 147 213 attendances were dealt with during the same period In addition to the 692 beds actually controlled by the hospital, students have the advantage of a close liaison with Lambeth Hospital, where demonstrations of rare and advanced cases, such as are seldom seen in the wards of a general hospital, are arranged at regular and frequent intervals by the superintendent The obstetric training of students is supplemented by an arrangement with St James's Hospital, Balham, whereby throughout the year two students at a time spend a fortnight in residence at St James's Hospital, where they follow and take part in, the maternity work of the hospital Clinical teaching of medicine and surgery is carried out daily throughout the year in the wards and out patient departments From the day that a student enters on his clinical studies he comes into direct responsible contact with patients Every student acts as clerk in the post mortem room and in the pathological laboratories The Medical Unit, through which every student passes for a period of three months, provides a very thorough grounding in clinical medicine and clinical biochemistry the in patient clerking being afterwards completed under the ae is of a different medical firm In addition to three months' dressing in the casualty department at the outset of his clinical studies every student becomes for six months a dresser to one of the surgeons of the hospital, during this period he receives instruction in anaesthetics Great stress is laid on the teaching of pathology, which proceeds *pari passu* with the clinical appointments held by the student throughout the curriculum The special maternity ward in the hospital gives the student scope for elementary obstetric training before he takes his turn of duty on the district where again he works under close supervision All the special departments are available for the teaching of students, special attention is given to ante natal instruction and the teaching of the diseases of children, a department through which every student passes The laboratories and reading room in the units building are open day and night for those who wish to avail themselves of these facilities A special Tuberculosis Department in the hospital forms a part of the Lambeth scheme for the treatment of patients The Venereal Disease Department is part of the L C C scheme The clinical material in the hospital is placed wholly at the disposal of undergraduate students with the exception of a small class held twice yearly for the Final F R C S Examination, postgraduate clinical students are not accepted Special tutorial classes in all subjects are held before all the final examinations of the Universities and Conjoint Board

St Thomas's House—the Amalgamated Students Clubs' premises immediately opposite the hospital—was opened in 1927, it has all club amenities, with two squash rackets courts, a miniature rifle range, and ample garage accommodation The hostel in the same building has accommodation with all modern comforts for 50 resident students There is a hard tennis court in the Medical School quadrangle and the beautiful sports ground at Chiswick provides for all field games

Appointments—After qualification the following appointments are open to students twenty five clinical assistantships to the various special departments are appointed every three months Eight resident casualty officers and anaesthetists, seven house physicians and nine house surgeons are appointed every six months Nine chief assistants (unpaid) to the special departments and nine non resident registrars (medical, surgical, obstetric, and ophthalmic) at a salary

of £250 hold appointments renewable yearly A resident anaesthetist (salary £200) a resident assistant physician and a resident assistant surgeon (salary £225 per annum) are appointed annually Assistants in the medical and surgical units (salary £450 to £600) hold appointments with a maximum tenure of four years Three assistants in the Department of Pathology hold appointments at a salary of £450 to £600 a year

Scholarships and Prizes—At this School there are the following Entrance Scholarships Two in Natural Science, of the value of £150 and £60 respectively the University Scholarship of £100 in any two of the following anatomy physiology pathology chemistry also the Hector Mackenzie University Exhibition of the value of £60 The value of all Entrance Scholarships is taken out in Tuition Fees The money value and subjects of examination of the remainder are as follows (*a*) William Tite Scholarship for second year students £25 (*b*) and (*c*) Musgrove Scholarship or (alternatively) Peacock Scholarship each for third year students and tenable for two years £35 each (*d*) Mead Medal medicine pathology and hygiene (*e*) Wainwright Prize medicine (*f*) Toller Prize medicine (*g*) Cheselden Medal surgery and anatomy, (*h*) Clutton Memorial Medal in Clinical Surgery biennial (*i*) Beaney Scholarship £50 biennially surgery and surgical pathology (*j*) Solly Medal and Prize biennial reports of cases (*k*) Sutton Sams Prize biennial reports of cases (*l*) Bristowe Medal pathology and morbid anatomy (*m*) Hadden Prize pathology and morbid anatomy (*n*) Grainger Testimonial Prize £31 10s anatomy and physiology (*o*) Louis Jenner Research Scholarship tenable for two years £60 annually pathology Anderson Scholarship and Perkins Fellowship research Myers Exhibition and Planck Prize in Psychological Medicine and others the result of special donations and bequests are available during the academic year

University College Hospital

The school which forms part of the corporation of University College Hospital is in immediate proximity to the hospital in University Street and opposite University College It comprises departments of medicine surgery midwifery and gynaecology pathology including morbid anatomy chemical pathology biochemistry and bacteriology cardiography forensic medicine mental physiology and mental diseases dental surgery practical pharmacy and other departments for the study of special diseases such as those of the eye, skin ear and throat venereal diseases and for instruction in anaesthetics electrotherapeutics and skiagraphy The hospital and school have acquired the National Dental Hospital and College as their dental departments thus providing every facility for the study of dental subjects The Royal Ear Hospital has also been amalgamated as the Ear Nose and Throat Department and a new hospital for in- and out patients close to University College Hospital It contains 41 beds including eight private wards for patients of limited means

The school thus provides the final course of study for the degrees of the Universities of Oxford Cambridge, London Durham, and other British universities and for the diplomas of the Royal Colleges of Physicians and Surgeons in medicine and in dental surgery Each department is also equipped for more advanced work, and provides facilities for research

Clinical units in medicine surgery and obstetric medicine are in operation The whole time directors of the units are concerned with the organization of the teaching generally, but the honorary staff is responsible for the largest share of the teaching in the wards and out patient department of the hospital The hospital has 617 beds including eighty five in the obstetric hospital and seventy-seven in the new private patients wing

The new buildings of the obstetric hospital of eighty-five beds (rendered possible by the Rockefeller benefaction) the new Residents House (with accommodation for thirty three residents and students) the extension of the Nurses Home and the new research laboratories for the Medical School are now finished and in full occupation Among the most recent developments are the following (1) The new Private Patients Wing with seventy seven beds, all of which are in single rooms with the exception of two four-bed wards This wing has the very latest medical equipment together with all possible devices for the comfort of patients (2) An entirely new and up to date x ray diagnostic department (3) New ante natal gynaecological and child welfare out patient departments The opportunity has been taken to transfer the present children's out patient department to the new extension thus securing the obvious advantage of easier co operation

A Students Hostel adjoins the Medical School Large airy and handsomely furnished bed sitting rooms each fitted with hot and cold running water are available

Appointments—The qualified appointments in addition to a number of posts as house physicians and house surgeons and obstetric assistants include the appointments of resident medical officer medical registrars surgical registrars obstetric registrar Harker Smith radium registrar ophthalmic registrar casualty medical officers casualty surgical officers assistants in ear nose and throat skin and venereal diseases departments and house anaesthetists

Scholarships—The following scholarships and prizes are open to competition Two Goldsmid Entrance Scholarships entitling the holder to the final course of medical study one Goldsmid Entrance Exhibition entitling the holder to a reduction by £80 of the fees due for the full course of final medical study and a Filliter Entrance Scholarship in pathology entitling the holder to a reduction by £52 10s of the fees due for the full course of final medical study The examination for these scholarships is in any two of the following subjects anatomy physiology general pathology and biochemistry The examination for 1939 will be held as follows Monday July 17 10 a.m. to 1 p.m anatomy 2 p.m. to 5 p.m physiology Tuesday July 18 10 a.m to 1 p.m biochemistry 2 p.m to 5 p.m general pathology Candidates for the Filliter Scholarship need take pathology alone Radcliffe Crocker Travelling Scholarship in dermatology for one year value about £280 the Graham Scholarship in pathology of a sum not exceeding £400 per annum Leslie Pearce Gould Research Scholarships in surgery for one year value about £260 the *Bilton Pollard Fellowship of the annual value of £650* per annum the Atkinson Morley Scholarship of £45 a year for three years awarded after examination in the theory and practice of surgery the Atchison Scholarship of £55 a year for two years for general proficiency in medical studies the Magrath Clinical Scholarship value about £160 Ferriere Scholarship value £25 the Filliter Exhibition in pathology of £30 the Percival Alleyn Prize for the advancement of surgery by research value about £500 and awarded every three years the Graham Gold Medal for research work four Fellowes Medals in clinical medicine Liston Medals in clinical surgery the Bruce Medal in pathology and surgery two Tuke Medals in pathology the Erichsen Prize for practical surgery and the Roberts and Suckling Prizes in obstetrics and gynaecology

Fees—*Inclusive fee to cover complete clinical course £45* per annum for three years Oxford and Cambridge students who have completed their course in pathology £40 per annum for three years There are no extras as these fees include courses of instruction in pharmacy vaccination and fevers and life subscription to the Medical Society or Women's Medical Club

Particulars of general and special courses can be obtained on application to the Dean University College Hospital Medical School University Street W C 1

Westminster Hospital

The new school officially opened in May by the Earl of Athlone and for some months in full activity is situated in Horseferry Road On an adjoining site the new hospital is rapidly approaching completion for the present clinical instruction continues at the hospital in Broad Sanctuary, opposite Westminster Abbey The education of students in the preliminary and intermediate subjects of the University of London is provided at King's College Strand, and University College The new buildings incorporate the latest advances in medical science The number of in patients averages 5 000 and out patients upwards of 30 000 annually and the hospital and school afford ample facilities for instruction in all branches of medicine and surgery Every student must perform the duties of out patient dresser for three months, and afterwards hold the office of in patient dresser for three

months He is also required to serve two terms of three months each as medical clinical clerk to the in-patient physician, and one term as gynaecological clinical clerk Pathological clerks are appointed every three months to assist in the post-mortem room No student is eligible as an in-patient dresser or clinical clerk until he has completed his examination in anatomy and physiology Clerks and dressers in the special departments of hospital practice are periodically appointed

An annexe devoted to radium therapy and research, containing twenty-two beds, is attached to the hospital

The athletic ground is situated at Tooting, and can be reached in twenty minutes from the hospital

Appointments—A medical registrar and an assistant medical registrar at a salary of £250 and £150 and three surgical registrars at a salary of £250 are appointed annually, and an obstetric registrar with a salary of £50 plus £50 for tutorial fees A senior resident and casualty officer, salary £104 per annum and board, appointed for six months may be extended for a further period of six months A medical registrar to the children (Wander scholar) salary £250 is appointed for one year Three house-physicians three house surgeons, three assistant house physicians three assistant house surgeons, and a resident obstetric assistant are appointed after examination and are provided with rooms commons and salary of £52 per annum except the assistant house-physicians and the assistant house surgeons who are provided with commons only The assistant house physicians after three months' service, become house physicians for a further period of six months and the assistant house-surgeons after three months' service, become house surgeons for a further period of six months One house anaesthetist is appointed for six months, non resident salary £100 per annum Clinical assistants to the assistant physicians and assistant surgeons and to the officers in charge of special departments, are appointed from among the qualified students

Scholarships—The following open scholarships are offered for competition during the year 1938–9 In the winter session two scholarships in anatomy and physiology, £75 each In the spring two scholarships in anatomy and physiology £75 each In May an examination in English Essay, Chemistry, and Physics is held on the results of which four Entrance Scholarships to the value of £75 each are awarded

During the period of study the following prizes may be competed for Sturges Prize in Clinical Medicine (Reports on Cases) Chadwick Clinical Surgery Prize (Reports on Cases), Chadwick Prize (Medicine and Surgery) Frederic Bird Medal and Prize Abrahams Prize (Clinical Pathology) Hanbury Prize in Diseases of Children Sturges Class Prize in Bacteriology, Class Prize in Midwifery Diseases of Women Medicine Pathology, Forensic Medicine Public Health and Surgery

Fees—The annual composition fee is 40 guineas An entrance fee is payable by all students—namely, primary and intermediate students, £13 13s students entering for the final subjects only, £8 8s These fees are subject to alteration from time to time as the School of Medicine may direct

Further information and a prospectus can be obtained on application to the Dean at the Westminster Hospital Medical School, 17, Horseferry Road S W 1

London (Royal Free Hospital) School of Medicine for Women

The school is situated at 8, Hunter Street, Brunswick Square, W C 1, close to the Royal Free Hospital It is, like all the other London schools which have so far been mentioned, one of the constituent schools of the University of London The laboratories are extensive and well lighted, and are fully equipped for the examination courses of the University of London and the Royal Colleges of Physicians and Surgeons Research laboratories are attached to all departments A large, well-equipped library, common room, Union Room, and refectory are provided for the use of students Resident accommodation for sixty-five students is provided in students chambers connected with the school

The Royal Free Hospital, Gray's Inn Road, W C 1, has 327 beds, of which twenty-four are for private patients The obstetrical and gynaecological unit controls sixty-eight beds A large maternity district is served from the unit with a separate maternity hostel in the Essex Road, Islington There are separate departments for diseases of the eye, ear, and skin, children and infant welfare, venereal diseases, orthopaedic surgery, massage, light, electrical and x-ray work, dentistry, and casualty

Students attend the practice of one of the fever hospitals of the London County Council and receive special instruction in psychological medicine at Horton Hospital, Epsom they are also admitted to the practice of a number of special hospitals, and hold clerkships and dresserships at the Elizabeth Garrett Anderson Hospital, the Royal Cancer Hospital the Hospital for Sick Children, Great Ormond Street, the National Hospital for Nervous Diseases, the South London Hospital, the Central London Ophthalmic Hospital and the Royal Ophthalmic Hospital The work of the school includes preparation for the Primary Fellowship examination

Appointments—Qualified students of the school can obtain appointments as house physicians and house surgeons obstetric assistants, surgical gynaecological, and medical registrars, assistant pathologists assistant anaesthetists medical electrician, skiagrapher, and clinical assistants and demonstrators in various subjects

Scholarships—The Isabel Thorne and A M Bird Entrance Scholarships, value £30 a year for six years the St Dunstan's Medical Exhibition value £60 a year for three years which may be extended to five years, the Alfred Langton Scholarship of £35 a year for two years the Flora Murray Bursary of £50, the Mabel Sharman Crawford Scholarship, value £20 a year for four years and the Emma Beilby Bursary of £55 a year, are offered for competition in each year The Sir Owen Roberts Memorial Scholarship and the MacIntyre Evans Scholarship each of the value of £75 a year for four years, the Mrs George M Smith Scholarship of the value of £50 a year for three years which may be extended to five years, the Dr Margaret Todd Scholarship of the value of £37 10s a year for four years, and the Sarah Holborn Scholarship of the value of £20 a year for three years, which may be extended to five years are awarded in alternate years The School Jubilee Bursary of £50 a year for three years is offered every third year The Fanny Butler Scholarship of £16 a year for four years is awarded every fourth year The Bostock Scholarship, value £90 a year for five years, is awarded by the University of London on the recommendation of the Reid Trustees and the School Council on the result of an examination held in May every fifth year The Lieutenant Edmund Lewis and Lieutenant Alan Lewis Memorial Scholarship, of the value of £25 a year for four years is awarded every fourth year The A M Bird Clinical Scholarship of £30 a year for three years the John Byron Bursary of £20 a year for two years, the Julia Ann Hornblower Cock Prize of £60, the Helen Prideaux Prize of £60 the Mabel Webb and A M Bird Research Scholarship of £200 for one year the A M Bird Postgraduate Scholarship of £200 for one year, together with other scholarships and prizes are offered on sundry conditions The Dr Edith Pechey Phipson Post graduate Scholarship of £95 is awarded annually Altogether the school offers annually £2,050 in scholarships Missionary societies offer scholarships on certain conditions to assist women who wish to work in the Mission Field

Fees—For the full course of study £50 per annum throughout the course

The Students Union exists to promote corporate action of the students on matters of common interest, to promote and maintain athletic and other clubs and to issue a school magazine All students are required to become members of the Union

Further information can be obtained from the Warden and Secretary

King's College

The Medical Faculty at this College of the University of London gives instruction in the subjects of medical science for all the usual pre-medical and intermediate examinations in medicine, surgery, and dentistry For final studies students proceed to one of the associated hospitals—King's College, Charing Cross, St George's, Westminster—whose ample facilities, including over 1,000 beds, are available for clinical work

The Medical Faculty of the College provides a general university education in touch with other faculties, classes

of which medical students are permitted to attend There are many college societies clubs and functions in which students of all faculties have opportunity of meeting each other The College has a large athletic ground at Mitcham with a new and well equipped pavilion

The first year subjects are taught in the large departments of the Faculty of Science Within the last few years there has been complete remodelling of the second and third year medical departments at a cost of £70 000 This has comprised a new Department of Anatomy and reorganization with considerable extension of the Department of Physiology

Scholarships—The scholarships include (1) Two Warneford Entrance Scholarships each £30 for four years subjects—divinity the writing of an English essay and three other subjects selected from mathematics classics and science (2) One Sambrook Entrance Scholarship of £30 for three years subjects of examination selected from mathematics classics and science One Warneford Scholarship awarded at end of first year Subjects as for First M B together with divinity (3) Worsley £100 paid in five annual instalments The holders of the preceding awards must proceed to King's College Hospital (4) Rabbeth Scholarships value £30 and £15 in July for the best student of the first year (5) Daniell Scholarship £40 (6) The Layton and Berridge Studentships each £150 and £100 per annum respectively and (7) numerous prizes

Full information as to admission fees and scholarships can be obtained from the Dean of the Faculty of Medical Science, King's College Strand W C 2

University College

This institution, one of the principal component parts of the University of London possesses a Faculty of Medical Sciences whose work covers all the subjects included in the group commonly known as the preliminary medical sciences—namely, physics, chemistry botany and zoology and also the intermediate medical sciences—namely anatomy (including embryology and histology) physiology biochemistry and pharmacology The anatomy building provided by the munificent gift of the Rockefeller Foundation of New York was opened on May 31 1923, by His Majesty King George V This building forms part of the block which includes physiology and pharmacology A new building has recently been added for the department of zoology, for the endowment and equipment of which the Rockefeller Foundation has made another generous benefaction Research work is undertaken in all the above named departments The College undertakes the education of students in all the subjects mentioned leaving them free to complete their education in the strictly professional subjects—medicine surgery and the like—at any one of the recognized schools of advanced medical studies The work is somewhat differently arranged, according to whether the student has in view the degrees of the University of London or the diplomas of the Royal Colleges In either case the whole work to be done is divided into courses devised to meet the requirements of different examinations and students can join the College for any of them Women students are admitted to all courses on the same terms as men The general arrangements for the benefit of students include membership of the Union Society or the Women's Union Society with use of the College gymnasium and the athletic grounds There is also a collegiate residence for about sixty seven men students at Ealing and for one hundred and seventy-two women students in Malet Street

Scholarships—The scholarships and exhibitions obtainable include the Bucknill Scholarship value 200 guineas in chemistry physics botany and zoology (the successful student must complete his work at University College Hospital Medical School)—the examination includes an English essay two Entrance Exhibitions in the same subjects each of the value of £30 a year for two years a Faculty of Medical Sciences Entrance Scholarship value £45 a year for two years the Bayliss Starling Memorial Scholarship (physiology and/or biochemistry) £130 the Ferriere Scholarship £25 tenable for three years at University College Hospital Medical School and two scholarships total value £100 awarded annually to enable medical students to proceed to the B Sc (special) degree in Anatomy or Physiology

Fees—The fees for the courses covering the work of the First Examination for medical degrees of the University of London and both parts of the Second Examination and for the corresponding examinations held by the Conjoint Board in England amount to 118 guineas These fees do not cover tuition for more than a stated period

A handbook specially relating to this faculty may be obtained on application to the Secretary of University College Gower Street London W C 1

West London Hospital Medical School

The West London Hospital Medical School is the youngest of the medical schools in London having started as recently as October 1937 Hitherto the hospital had been a centre for postgraduate study for some forty years and its Postgraduate College was the leading institution of its kind in London until the formation three years ago of the British Postgraduate Medical School at Hammersmith The West London Postgraduate College did not wish to enter into competition with its publicly controlled neighbour and after consultation with the University of London it was decided that its facilities could be most usefully employed as a medical school to which the admission of women should be a prime consideration Steps were accordingly taken to obtain recognition for this purpose from the universities and other examining bodies and the School has now been recognized as a clinical school for students reading for the medical degrees of the Universities of Oxford Cambridge and London and for the diplomas of the Conjoint Board and the Society of Apothecaries Recognition for students of other universities is sought when required and has never been refused So far as the University of London is concerned the School has not yet been admitted to the full privileges of a "School of the University but it is hoped that this further recognition may be granted in the near future At present the students come under the purview of the Council for External Students but this makes no difference to the course of study the regulations for internal and external students in medicine are identical

The hospital contains 239 beds and admits some 4 500 patients every year The out patient department is exceptionally large and deals with over 43 000 new cases each year while the annual attendances exceed a quarter of a million All the special departments are provided for but the hospital has recently established special clinics for the treatment of injuries and for rheumatic diseases being the first general hospital in London to do so

It is proposed to admit some twenty four students annually making a total of approximately seventy two for the three years clinical course All students must have passed their Second M B Examination (Anatomy and Physiology) or its equivalent before admission The School is open to men as well as women but preference is given to women and all students except in very special circumstances will be required to read for one of the university degrees At the present moment the total number of undergraduate students is fifteen but until the full complement has been reached a restricted number of postgraduates will be admitted These have access to all the clinics but do not hold any regular appointments and do not therefore interfere with the work of the undergraduates

The School has leased from the hospital two adjacent and intercommunicating houses on the hospital property (1 and 3 Wolverton Gardens) Here are situated the offices students cloakrooms library and certain other rooms not yet definitely allocated of which some will form the nucleus of a students club At the present there is no residential hostel but there is ample accommodation in the immediate neighbourhood which is largely residential in character It is hoped to provide some sort of restaurant facilities in the near future but in the meantime the Hammersmith Road can supply eating houses to suit all tastes and purses

Appointments—Resident appointments will be available to students of the School on qualification and a fair proportion of these will be open to women Senior appointments will

also be given to students of the School when suitable candidates are available

Fees—For the present the fees have been fixed at £50 per annum payable quarterly in advance The question of an entrance fee is under consideration As the School has no endowments it is not yet possible to offer any scholarships

THE PROVINCES

There are in England and Wales not counting London, ten medical schools, each supplying instruction in the full medical curriculum Accounts of them here follow In several cases information is appended about hospitals other than those directly connected with the school in question, such hospitals, officially and unofficially, play a part in the education which the students of the school receive, and in any case serve as places of additional or postgraduate study

Oxford and Cambridge

At both Oxford and Cambridge there are medical schools which furnish unsurpassed opportunities for obtaining a good knowledge of the preliminary sciences and of anatomy, physiology, and pathology The laboratories are excellently furnished, and the teaching staffs most distinguished Both schools provide a full medical curriculum, and there is no essential reason why the student should not complete his career at either of them, but this is not commonly done and is never, in the ordinary way, advised by the university medical authorities The local hospitals—the Radcliffe Infirmary at Oxford and Addenbrooke's Hospital at Cambridge—though well equipped, are comparatively small Students are therefore encouraged, as soon as they have completed the earlier examinations and taken a degree in arts, to join one of the London medical schools, and thus spend the time of their preparation for the final examinations in a city where the opportunities for gaining clinical knowledge are greater and more varied A considerable proportion of Oxford and Cambridge medical students take the London Conjoint diplomas before graduating in medicine and surgery at their own university The experience gained by holding resident hospital appointments is naturally of much advantage when sitting for the Final M B examination

Birmingham

The school in this city is carried on by the Medical Faculty of the University of Birmingham, its students having an adequate number of good laboratories, classrooms, and other necessaries devoted to their use by the university The clinical work is done at the Birmingham United Hospital (General and Queen's Hospitals), which are amalgamated for the purpose Together they have upwards of 800 beds for medical, surgical, and special cases, with an array of special departments of all kinds, including one for lying-in women (about 13,000 in-patients and 90,000 out-patients) Clinical instruction is given in the wards and out-patient and special departments daily, and formal clinical lectures are delivered weekly throughout the session Special tutorial classes are also held alike for the degrees of Birmingham and other universities, and for the diplomas of corporations Students attend the Children's Hospital, Maternity Hospital, and Fevers and Mental Hospitals for instruction in special subjects

The Birmingham United Hospital—The practices of the General Hospital and the Queen's Hospital are amalgamated for the purpose of clinical instruction, which is carried on under the direction of the Board of Clinical Studies They present an almost unrivalled field for clinical work, possessing more than 800 beds, treating annually about 14 000 in-patients and 90,000 out-patients, and as students spend part of their curriculum in each hospital, they have every opportunity of acquiring a varied, full, and practical knowledge of their professional work The curriculum is adapted in the first place to meet the needs of the students of the Birmingham University proceeding to the M B, Ch B degrees, but it is also well adapted to the requirements of students preparing for the examinations of all other universities and licensing bodies The advantages that the combined hospitals offer to students do not cease with graduation, for there is probably no city in which students after qualification have a larger number of resident posts open to them

Resident posts are also available at the Children's Hospital, the City General Hospitals, the City Public Assistance Institutions, the Birmingham Mental Hospitals and Mental Deficiency Act Institutions, the City Infectious Diseases Hospitals, the Birmingham General and Branch Dispensaries, the Birmingham and Midland Eye Hospital, the Royal Cripples Hospital, the Ear and Throat Hospital, the Maternity Hospital, the Women's Hospital, at St Chad's Hospital Edgbaston, and at the Birmingham and Midland Hospital for Nervous Diseases Besides positions in institutions in the City of Birmingham there are numerous resident salaried appointments in the hospitals in the immediate vicinity which are open to the students of the Birmingham Medical School Appointments are also open to medical practitioners in the Naval Military, Air Force, and Indian and Colonial Medical Services

Scholarships and Prizes—There are numerous money and other awards for students of sufficient merit, among them being the following Frank Fletcher and Catherine Fletcher Scholarships (not less than two per annum) tenable for five years, each of the annual value of £100 awarded on higher school certificate examination of the Joint Matriculation Board, the Walter Myers Travelling Studentship of £300, offered each alternate year for research work and tenable abroad, the Sands Cox Scholarship of £42 (an entrance scholarship in the Faculty of Medicine awarded on higher school certificate examination of the Joint Matriculation Board (July)) four Queen's Scholarships of £10 10s each, awarded annually at the second (Part II), third, fourth, and final university examinations respectively, one or more Sydenham Scholarships allotted on entrance to students who are the sons of deceased medical men, the Ingleby Scholarships (two) of £10 for proficiency in midwifery and diseases of women, the Arthur Foxwell Memorial Gold Medal (clinical medicine), the Sampson Gamgee Memorial Medal for surgery (Final M B), the Russell Memorial Prize (for examination in nervous diseases final year), the Priestly Smith Prize in ophthalmology, value about £6 (awarded in the final examination), the Peter Thomson Prize in anatomy (value about £6) for students in their third university year, the Bertram Windle Prize (value about £10) for special work in anatomy, and the John Barritt Melson Gold Medal in Physiology for students in their third university year The Leith Newman Prize in Pathology (Medical) (value £10) is awarded annually on students class Leith Newman work and professional examination, and a prize (value £5) under similar conditions for dental students There is also a scholarship of £37 10s 0d for students proceeding to a degree in dental surgery Board of Clinical Studies Prizes are awarded annually as follows Senior Medical Prize, gold medal, Senior Surgical Prize gold medal, Midwifery Prize, gold medal Junior Medical Prize, silver medal, Junior Surgical Prize, silver medal

Fees—The composition fee for university classes is £106 6s. This covers all the work required for the degrees of Birmingham and some other universities and for the ordinary qualifications of licensing corporations but not the additional courses required for the Fellowship of the Royal College of Surgeons of England the diploma and degrees of the university in State medicine, and some other special work The total cost for the six years' curriculum including hospital and examination fees, is £246 0s 6d (If first year science subjects are excluded, £208 15s 6d)

Other information should be sought from the Registrar, The University, Edgbaston, Birmingham

Bristol

The school is carried on by the Faculty of Medicine of the University, and provides full instruction for all its degrees and for the diploma in dental surgery

Clinical Instruction—The allied hospitals (Bristol Royal Infirmary and Bristol General Hospital) have between them more than 700 beds and extensive out patient departments, special clinics for diseases of women and children, including ante-natal and post natal work, also for

eye ear nose and throat and skin diseases in addition to large and well equipped departments for dental work and large outdoor maternity departments At each of these institutions there are well arranged pathological museums post mortem rooms and laboratories for morbid anatomy There are also laboratories for work in clinical pathology bacteriology and biochemistry in which special instruction is given in these subjects Departments are provided and well equipped for radiology radiotherapy actinotherapy electrotherapy and massage with all forms of physiotherapy These hospitals include a National Radium Centre The students of the school also attend the City and County Mental Hospital the Ham Green Hospital for instruction in fevers and tuberculosis the practice of the Royal Hospital for Sick Children and Women containing 120 beds, and that of the Bristol Eye Hospital with eighty two beds In addition by the kind permission of the Health Committee of the Bristol City Council students may attend the clinical practice at Southmead Hospital and may complete under certain conditions their practical work in obstetrics at that institution which has 510 beds The Orthopaedic Hospital at Winford Stoke Park Colony for Mental Defectives and Winsley Sanatorium are also available

Appointments—(1) Undergraduate Medical clerkships surgical dresserships also ophthalmic obstetric pathological dermatological ear nose and throat clerkships are tenable at the Bristol Royal Infirmary and the Bristol General Hospital In these institutions the dressers reside in rotation free of charge Clerkships are tenable at the Children's Hospital (2) Postgraduate at the Bristol Royal Infirmary four house surgeons one casualty house surgeon three house physicians one resident obstetric officer one gynaecological and dermatological house surgeon one ear nose and throat house surgeon one assistant house surgeon (who also acts in the ophthalmic department) one dental house surgeon and one unpaid assistant (usually a resident student) to the senior resident medical officer All these appointments are for six months Salary in each case at the rate of £60 per annum with board apartments and laundry except the casualty house surgeon and the dental house surgeon who receive £80 per annum In each case the salary is increased by £40 per annum if the officer is re elected for another six months From the resident medical officers a senior resident medical officer is appointed at a salary of £200 per annum Clinical assistantships in all departments are open to senior qualified practitioners At the Bristol General Hospital senior resident medical officer £200 per annum casualty house surgeon £100 per annum two house physicians £80 per annum three house surgeons £80 per annum resident obstetric officer £80 per annum house surgeon to special departments £80 per annum All the £80 appointments carry a salary of £100 for residents who have previously held another of them the dental house surgeon (non resident) £300 per annum All these appointments are for six months except that of senior resident medical officer which is for two years Clinical assistantships in the out patient departments are also available

Scholarships—The following are among the scholarships and other awards open to students of the school The Miriam Badock of the value of £120 and the H H Wills Science Scholarships open to boys proceeding from Clifton College the Harold Greenwood Memorial Scholarship of the value of £20 open to boys who have received instruction at State provided schools in Clevedon (or elsewhere in Somerset) and subsequently at secondary schools in Somerset or Bristol the Dulverton Scholarship (£100 a year for three years) has been assigned to the Medical Faculty for the year 1938 the Ashworth Hallett Scholarship value £40 open to women only two Martyn Memorial Pathological Scholarships of £10 each the Tibbits Memorial Prize value 7 guineas for proficiency in practical surgery the Committees Gold and Silver Medals for fifth or sixth year students for general proficiency the Augustin Prichard Prize value about 6 guineas for proficiency in anatomy the Henry Clark Prize value 11 guineas for proficiency in obstetrics and gynaecology the Crosby Leonard Prize value 6 guineas for proficiency in surgery the Suple Surgical Prize a gold medal and 7 guineas the Suple Medical Prize a gold medal and 7 guineas the Henry Marshall Prize value £12 for dressers the H M Clarke Scholarship value £15 for proficiency in surgery the Royal Infirmary Faculty Prize value £20 for general proficiency the Sanders Scholarship value £22 10s for general proficiency the Barrett Roue Scholarship for proficiency in diseases of the eye ear nose and throat value £24 open to men only Lady Haberfield Scholarship value about 25 guineas Bristol and Bath City Scholarships and the Scholarships offered by the counties of Gloucestershire Somerset Wilts Dorset etc are tenable in the university

One or more Fellowships of not less than £100 per annum are allocated by the Colston Research Society for medical research A Beaverbrook Fellowship tenable for three years is open to all members of the university holding a medical qualification University graduate scholarships are open to graduates of not more than one year's standing The Michael Hiatt Baker Scholarship of the value of £200 per annum open to a graduate from New Zealand may be held in the medical faculty The Markham Skerritt Memorial Prize is awarded every three years to that member of the university not a member of the medical board who in the opinion of that board has published the best original work during the three years The Paul Bush Gold Medal is awarded in alternate years to the best resident medical officer at the Bristol Royal Infirmary

Fees—The fee for all the courses required for the medical curriculum including hospital practice is 220 guineas paid by annual instalments

Further information as to scholarships courses and fees can be obtained from the Dean of the Faculty of Medicine or the Registrar of the University Bristol

UNIVERSITY OF DURHAM

The Medical School, King's College, Newcastle upon-Tyne

(Formerly the University of Durham College of Medicine)

The former University of Durham College of Medicine has become the Medical School King's College in the neighbouring city of Newcastle-upon Tyne and constitutes the Medical School of the Faculty of Medicine of the University of Durham At the beginning of the Winter Session (October 1938) the activities of the Medical School will be resumed in new premises adjacent to the Royal Victoria Infirmary as well as in close proximity to the main buildings of King's College where the students of other faculties attend Its classes and lectures are arranged to meet the requirements of the university in all the degrees granted by the university in the Faculty of Medicine and also those of the other examining bodies Hospital practice is carried out at the Royal Victoria Infirmary, a general hospital containing more than 700 beds where there are facilities for the study of the various special subjects Students do their practical midwifery at the Princess Mary Maternity Hospital which contains ninety beds and has an annual indoor and outdoor attendance on 3 000 cases In the Medical School itself there is a gymnasium and a set of rooms for the separate use of the students

The Newcastle upon Tyne Dental Hospital and Sutherland Dental School is a component part of the dental department in the Medical School The dental hospital erected within the grounds of the Royal Victoria Infirmary and equipped on the best modern lines was opened in 1931 and it is possible to undertake here the whole of the dental curriculum (that is systematic lectures dental and general hospital practice, together with mechanical pupilage) The Dental Board of the United Kingdom recognizes the school for the purpose of granting its bursaries to students who are able to comply with the conditions laid down by the Board

Postgraduate Instruction—A comprehensive series of postgraduate courses are arranged to enable practitioners to take advantage of the facilities for laboratory work and clinical study afforded by the College the Royal Victoria Infirmary and other associated hospitals and in order to meet the varied requirements of practitioners there are general and special courses in the winter and summer sessions as well as an intensive course in the summer vacation in addition there are other postgraduate courses for panel practitioners which are held by special arrangement with the Ministry of

Health and other bodies Courses of instruction are given for the B Hy and D P H

Students Union—A Students' Union furnished at a cost of over £54 000, is in daily use Separate accommodation (non residential) is provided for men and women students

Appointments—Assistants in the pathological department, eye department, throat and ear department and department for skin diseases, are elected periodically Clinical clerks and dressers are appointed every three months Resident appointments at the Infirmary are made every six months, and each year medical and surgical registrars (who also act as tutors) are appointed from candidates who have previously held resident appointments at any recognized hospital These latter posts afford an excellent opportunity for postgraduate study, not only at the Infirmary but also in the departments of anatomy, physiology, pathology, and bacteriology of the College

Scholarships—University of Durham Entrance Scholarship £25 a year for four years Pears Entrance Scholarship £40 a year for three years (awarded every third year), Heath Entrance Scholarship (from Kepier Grammar School) £60 (renewable), Province of Durham Masonic (Entrance) Scholarship, £60 (renewable), Heath Scholarship for surgery £200 available every second year, Rutherford Morison Surgical Scholarship, £180, available every third year

The following scholarships are tenable for one year—namely Tulloch Scholarship for elementary biology and organic chemistry, £20, Dickinson Scholarship for medicine, surgery, midwifery, and pathology, £20, Charlton Scholarship for medicine, £25, Gibb Scholarship for pathology, £28 Luke Armstrong Scholarship for B Hy and D P H (Part I) examination in bacteriology, £25, Stephen Scott Scholarships for anatomy and physiology, two of £50 each, Philipson Scholarships for highest marks in Final M B, B S examination two of £45 each Goyder Memorial Scholarship for clinical medicine and clinical surgery, interest on £325, Hamilton Drummond Memorial Scholarship, in aid of research in clinical surgery, about £50 Macpherson Prize for diabetes or Bright's disease, £15, Gibson Prize for midwifery and diseases of women and children £10 Turnbull Prize and silver medal for surface anatomy, Outterson Wood Prize for psychological medicine £10 Sewell Memorial Prize and silver medal for clinical pathology, Sir Thomas Oliver Prize and silver medal for the physiology of food and nutrition, and Ranken Lyle Prize and silver medal for clinical midwifery Approved applicants may obtain special grants for surgical research from the Stephen Scott Research Fund and Heath Surgical Research Fund for research in asthma, etc, from the William Dodds Research Fund, and for research in dental science from the Parker Brewis Dental Research Scholarship Fund

Fees—For systematic, practical, and clinical instruction under the new regulations the fees will be approximately on the following bases M B B S £230 B D S £225 and L D S £185, including in each of the latter cases the fee for pupilage in dental mechanics The fees as stated include £35 for the First Year Pre medical course In addition there are incidental fees for the Students' Union, library, board during residence at maternity hospital, etc amounting to about £50 during the period at the College Other information should be sought from the Dean of Medicine the Medical School, King's College, Queen Victoria Road, Newcastle upon-Tyne

Leeds

The School of Medicine—which is open to both male and female students—in this city forms the teaching centre of the Medical Faculty of the University of Leeds, and is situated in immediate proximity to the General Infirmary, where students sufficiently advanced receive their clinical instruction The main buildings, opened in 1894, contain excellent dissecting rooms, well-arranged laboratories for physiology, lecture theatres, and classrooms In addition, there is a well-equipped library and reading room and a museum of anatomy The comfort of the students is secured by means of common-rooms and a refectory Extensions of the medical school buildings were opened in October, 1930 The Algernon Firth Institute of athology, which was opened in April, 1933, houses the epartments of Pathology and Bacteriology, and Experimental Pathology and Cancer Research, including the Charles Brotherton Pathological Museum The General Infirmary has 673 beds, and includes ophthalmic and children's wards, a large out patient department, and the Ida and Robert Arthington Semi convalescent Hospitals, Cookridge The West Riding Mental Hospital at Wakefield is available for the study of mental diseases Students also attend the practice of the Hospital for Women and the Leeds Maternity Hospital, and may attend also at the Leeds Public Dispensary

Appointments—Physicians clerks and surgical dressers are appointed every six months, clerks in the children's department, orthopædic dressers ophthalmic and aural dressers, gynæcological ward clerks maternity clerks, assistant physicians clerk, dermatological clerks, assistant surgeons dressers, dressers in the casualty rooms, junior and senior post mortem clerks, laboratory assistants and dressers in the venereal clinic every three months After graduation a considerable number of resident and other appointments become available in the Leeds General Infirmary Leeds Public Dispensary, Hospital for Women and Children West Riding Mental Hospital, etc, occupying periods of from six to twelve months at rates varying from £20 to £150 per annum

Scholarships—The university awards annually on the results of the first examination a scholarship in the form of free admission to the lectures and classes given in the School of Medicine The university also awards a scholarship on the results of the second examination in the form of free admission to the clinical teaching of the Infirmary

Fees—The approximate cost of medical education to a student in this university is estimated at £370, plus, of course the expenses of living during the five and a half years covered by the curriculum The composition fee for the course for the first, second, third and final examinations and for the clinical work at the Infirmary, is £242 The composition and clinical fee for those who have passed the second examination is £153

Further information can be obtained from the Academic Sub-Dean or Clinical Sub-Dean School of Medicine, Leeds

Liverpool

The Medical Faculty is part of the university, and all the laboratories and other rooms are well equipped for the instruction of students proceeding to medical degrees and diplomas, and are situated close to one another Clinical instruction is provided at the following hospitals the Royal Liverpool United Hospital (Liverpool Royal Infirmary, the David Lewis Northern Hospital, the Liverpool Royal Southern Hospital, the Liverpool Stanley Hospital), the Royal Liverpool Children's Hospital, the Women's Hospital, the Liverpool Maternity Hospital, the Eye, Ear, and Throat Infirmary, St Paul's Eye Hospital, and certain municipal hospitals

Manchester

The staff of the Medical School in this city constitutes the Medical Faculty of the Victoria University, all the arrangements for the instruction of students, both in their earlier and their later studies, being of an elaborate nature The clinical work of the undergraduates is done chiefly in connexion with the Royal Infirmary, an institution which itself contains 586 beds and has associated with it a large convalescent home (136 beds) and a Central Branch Hospital (five beds). The courses in mental diseases are taken in the County Mental Hospitals at Prestwich and Macclesfield Instruction in practical gynæcology and midwifery is given at the Royal Infirmary and the St Mary's Hospitals

Clinical Work—The Royal Eye Hospital, the Hospital for Diseases of the Skin, the Manchester Northern Hospital for Women and Children, the well known Hospitals for Children at Pendlebury and St Mary's Hospitals for Women and Children, the Manchester Hospital for Diseases of the Ear, Monsall Fever Hospital, the Christie Cancer Hospital and Holt Radium Institute, the Hospital for Consumption and Diseases of the Throat and Chest, the Ancoats Hospital, the Salford Royal Hospital, and the Hospital for Babies all make arrangements for the instruction of students

Appointments—The following are among the appointments open to past and present students of this school in connexion

with its arrangements for clinical tuition two pathological registrars at £100 and £50 per annum one medical registrar at £150 a cardiographic registrar at £150 a director of the clinical laboratory at £400 and two assistants at £350 and £300 four chief assistants to medical units each at £300 four chief assistants to surgical units £250 chief assistant to neurosurgical service £350 chief assistant to orthopaedic department £250 clinical tutor to orthopaedics £35 medical registrar to out patient department £150 assistant surgical officers aural department at £35 seven anaesthetists from £75 to £125 each three anaesthetists at central branch £25 to £100 one resident medical officer one year £200 one resident clinical pathologist £100 one resident surgical officer one year £200 senior house surgeon for central branch £150 one resident casualty officer £150 one resident medical officer at the Convalescent Hospital at Cheadle £250 two assistant medical officers to radiological department £400 and £200 medical officers physiotherapeutic department £150 assistant medical officer £100 chief assistant gynaecological department £70 assistant to the dermatological department £35 two medical officers out patient department each £105 sixteen assistant surgical officers to dental department £35 four technical assistants for laboratory work £200 clinical assistant to aural out patient department, £35 sixteen house surgeons and eight house physicians appointed during the year for periods of six months at a salary of £50 per annum Resident officers are appointed to the gynaecological the eye and the ear and throat departments every three months Clinical clerks and surgical dressers are appointed to the various departments of the hospital every three months Non resident clinical assistantships for qualified medical men and women tenable for six months at an honorarium of £35

Entrance and other Scholarships—The following are among the scholarships obtainable by students of the school Rogers and Seaton Scholarships in Arts (in alternate years) £40 per annum tenable for two years Three Hulme Scholarships, tenable for three years of £35 one being awarded annually for proficiency in subjects of general education Two James Gaskill Scholarships of £35 tenable for two years one being awarded annually for proficiency in the branches of mechanics and chemistry A Dora Muir Scholarship £30 per annum tenable for three years and open to the competition of women students only This is awarded triennially Sir J P Kay Shuttleworth Scholarship, £30 per annum tenable for three years awarded triennially open to the competition of scholars from Sedbergh School Giggleswick School and Burnley Grammar School subjects—mathematics chemistry and mechanics Dreschfeld Memorial Scholarship, value £20 tenable for two years and awarded triennially on the result of the Entrance Examination John Russell Medical Entrance Scholarship awarded annually value £45 Two Dauntesey Junior Medical Scholarships value £50 each tenable for one year for candidates who have not commenced the second year of study leading to a medical qualification subjects—chemistry physics botany and zoology One Dauntesey Senior Medical Scholarship £50 for one year awarded on results of Second M B Examination Two Entrance Scholarships in medicine value 160 guineas awarded annually for proficiency in arts or science respectively Tom Jones Exhibition in anatomy £25 offered annually A Robert Platt Physiological Scholarship of £90 tenable for one year A Leech Fellowship of £100 for original research after graduation A Graduate Research Scholarship in medicine value £70 tenable for one year awarded annually for proficiency shown at Final M B Examination Two Dumville Surgical Prizes each value £15 awarded annually at graduation The Tom Jones Memorial Surgical Fellowship value £105 tenable for one year usually awarded annually The Turner Medical Prizes value 10 guineas each awarded annually for proficiency in certain subjects of the Final M B Ch B Examination The John Henry Agnew Prize of £30 awarded annually for proficiency in the diseases of children The Ashby Memorial Scholarship tenable for one year (£100) for research in the diseases of children offered triennially Sidney Renshaw Prizes in physiology offered annually (£10 and £20) Wild prize in pharmacology (£10) The John Henry Agnew Fellowship in diseases of children £120 offered triennially Eliza Marple Holt Postgraduate Medical Scholarship for Women £60 for one year offered biennially The details and regulations of the Dickinson Scholarships—(1) for anatomy (2) for pathology (3) Research Scholarship in surgery and (4) Travelling Scholarship in medicine—may be obtained from the Secretary to the Trustees The Morrison Watson Fellowship for research in anatomy is offered annually value £150 also the Sheridan Delepine Fellowship in preventive medicine value £300 is offered biennially The Sam Gamble Scholarships—the trustees are prepared to award four scholarships of not more than £40 per annum to women students who have passed the First M B Examination the conditions can be obtained from the Registrar The Knight Fellowship of £150 offered triennially for the encouragement of the study of factors concerned in the development of the symptoms of mental disturbance—open to competition of graduates of this or any approved university Pilkington Fellowship in Cancer Research £300 for one year

Fees—The composition fee for the university course in medicine is 114 guineas payable in four instalments of 28½ guineas but this sum does not include the fee to cover the work required for the First M B Examination This is £42 payable in one sum Hospital fees are additional and usually amount to about 90 guineas

A prospectus and further information about the school and scholarships may be obtained from the Registrar

Sheffield

In this city the Medical School is one of the departments of the university, being conducted and controlled by its Medical Faculty and occupying practically the entire north wing of the quadrangle of the university buildings overlooking Weston Park The laboratories and lecture rooms connected with the subjects of the first and second examinations—namely chemistry physics biology anatomy and physiology—are both as regards structural arrangement and scientific equipment, on the most modern and complete lines

For students of pathology and bacteriology there are laboratories replete with everything necessary for the most advanced work and a large pathological museum which is open daily In addition there is a large library and reading room There are a number of recreation athletic and other societies all under the management of an annually elected students representative council and large and comfortable common rooms for both men and women students Thanks to the generosity of Alderman J G Graves there is a new and well equipped Union building in close proximity to the university which affords ample facilities for the various student social activities

There is ample hostel accommodation for both men and women students In the university and in the Union buildings there are refectories open to all students of the school A university journal is published each term and the Medical School also publishes a journal The ordinary clinical work of the school is done at the Royal Infirmary and Royal Hospital which have amalgamated for the purpose of clinical instruction, and provide over 800 beds for medical surgical and special cases including diseases of the eye

In addition the Royal Infirmary has special departments for the treatment of diseases of the skin and ear with beds assigned to them whilst at the Royal Hospital there are special out patient departments for diseases of the throat ear and skin orthopaedics and mental diseases The medical and surgical staffs attend daily and give clinical instruction in the wards and out-patient rooms Instruction in the practical administration of anaesthetics is given at either institution by the anaesthetists and the post mortem examinations at both institutions are in charge of the Professor of Pathology and afford ample material for study of this subject Students are able to attend the practice of the Jessop Hospital for Diseases of Women and the Hospital for Sick Children while special courses on fevers are given at the City Fever Hospital and on mental diseases at the South Yorkshire Mental Hospital

Appointments—The following appointments are open to all students who have passed their examinations in anatomy and physiology (1) casualty dresserships (2) surgical dresserships (3) medical clerkships (4) pathological clerkships (5) ophthalmic clerkships (6) clerk to the skin department etc These appointments are made for three months commencing on the first day of October January April and July

Scholarships—Entrance Medical Scholarship covering cost of tuition fees for a degree course in the Faculty of Medicine open to both sexes Six Edgar Allen Scholarships of £100 a

year for three years may be held by students taking the degree course in medicine Two Town Trustees Scholarships, each of the value of £50 a year tenable for three years, for boys or girls who have been educated in a Sheffield secondary school for a period of not less than two years immediately preceding the examination Four Town Trustees Scholarships value £50 a year for boys or girls under 19 years of age educated in any school in Sheffield secondary or otherwise Town Trustees Fellowship value £75 tenable for one year Mechanics Institute Scholarship value £50 (with remission of fees) tenable for one year, and renewable for a second year The Frederick Clifford Scholarship value about £50 tenable for two years Kaye Scholarship value £60 for proficiency in anatomy and physiology Gold and bronze medals are also awarded for proficiency in various subjects

Fees—Students in the Faculty taking their complete medical course in the university pay an inclusive composition fee of £42 for each of the first five years and £28 for the sixth year The composition fees for the dental courses are as follows for B D S first and third years £80 second fourth, and fifth years £30 for L D S first and second years £80, third and fourth years, £30 The fees for special courses taken separately can be ascertained by inquiry of the Dean

The Welsh National School of Medicine

The next session opens on October 4 All classes are open to both men and women students Particulars relating to the admission of students can be obtained on application to the Provost, or to the Secretary, The Welsh National School of Medicine, the Parade, Cardiff (See further details under University of Wales (p 498))

SCOTLAND

As will be gathered from the following paragraphs, the facilities for acquiring a medical education in Scotland are very ample, whether the student be proceeding to a university degree or to a diploma To the descriptions of the different Scottish medical centres is in some cases added an account of hospitals which either play an official part in the education given to students as yet unqualified, or offer valuable opportunities for postgraduation work

Aberdeen

The school is conducted by the Faculty of Medicine This comprises twelve chairs, from which instruction is given in all the main branches of medical science—namely, biology, physics, chemistry, anatomy, physiology, materia medica, pathology, bacteriology, surgery, medicine, and midwifery Courses of instruction in forensic medicine, public health and infectious diseases, tropical medicine, medical ethics, psychopathology, tuberculosis, and clinical methods are conducted by lecturers appointed by the University Court Special opportunities for practical instruction are afforded in the laboratories and museums attached to the departments For students commencing study in October, 1938, and afterwards the curriculum extends over five years and two terms (in all, seventeen terms) Every student during his final year will require to reside for a period of four months in a residence on the joint hospitals site

Clinical instruction is obtained in the Royal Infirmary, the Royal Mental Hospital, the Sick Children's Hospital, the City Fever Hospital, the General Dispensary, Maternity, and Vaccine Institution, and the Ophthalmic Institution Courses of practical instruction are given in diseases of children at the Sick Children's Hospital, in fevers at the City Fever Hospital, in mental diseases at the Royal Mental Hospital, in diseases of the ear, nose, and throat at the Infirmary and Dispensary, in diseases of the eye at the Infirmary and Eye Institution, in venereal diseases and diseases of the skin at the Royal Infirmary

The degrees granted in medicine are Doctor of Medicine (M D) Master of Surgery (Ch M), Bachelor of Medicine and Bachelor of Surgery (M B, Ch B) A diploma in public health is conferred after examination on graduates in medicine of any university of the United Kingdom The degree of Ph D is also granted in this faculty

Fees—An inclusive fee of 127 guineas is payable for instruction within the university and the fee for the degrees of M B, Ch B is 33 guineas The total cost, including hospital fees class and matriculation fees, and degree fees, is about £250

There are numerous bursaries scholarships, and fellowships in the Faculty of Medicine The bursaries range in value from £10 to £45 per annum and are tenable for periods of from one to five years The Scholarships and Fellowships are mostly tenable for two years and vary in value up to £260 per annum

Edinburgh

There are two Schools of Medicine the School of the University, and the School of Medicine of the Royal Colleges of Physicians and Surgeons of Edinburgh

THE UNIVERSITY SCHOOL—This school, in addition to other resources of the university, has the following means of affording practical instruction Royal Botanic Garden, Herbarium, and Museum, zoological laboratory and museum of science and art, physical laboratory, chemical laboratories, dissecting room, bone room, and anatomical museum, physiological laboratory, medical jurisprudence laboratories, John Usher Institute of Public Health, materia medica museum and laboratory, post mortem department of the Royal Infirmary and University Pathological and Bacteriological Laboratory, tutorial classes of practice of physic, of clinical medicine and clinical surgery, surgery, and midwifery, and the practice of certain other hospitals

Fees—The sessional fee for chemistry anatomy lectures physiology, pathology materia medica surgery, medicine and midwifery is £6 6s each Physics, botany zoology, forensic medicine, and public health £5 5s Practical zoology practical anatomy (summer), morbid anatomy, practical materia medica, mental diseases practical pathology, clinical midwifery, and medical entomology and parasitology, £4 4s Experimental physiology, diseases of tropical climates practical botany, histology, child life and health, operative surgery clinical surgery (per term), and clinical medicine (per term) £3 3s Practical anatomy (winter) £6 16s 6d Practical chemistry, £4 14s 6d, chemical physiology surgical pathology and infectious diseases £1 11s 6d Tuberculosis diseases of the eye, diseases of the larynx, ear and nose diseases of the skin and venereal diseases, £2 12s 6d Advanced bacteriology £7 17s 6d Clinical gynaecology, regional anatomy, and applied anatomy, £2 2s

Scholarships—There are many funds for the assistance of students by means of bursaries, scholarships, exhibitions and money awards from the beginning to the end of their undergraduate career In addition there are funds which help those who have taken a first degree in medicine and surgery to continue at work as research students The value of these awards and the conditions attaching to them, are so varied that those interested should consult the prospectus of the school itself

THE SCHOOL OF MEDICINE OF THE ROYAL COLLEGES—This school is composed of Lecturers licensed by the Royal College of Physicians and the Royal College of Surgeons and in most cases also recognized by the University of Edinburgh through their *licentia docendi*, for the sake of convenience they lecture in separate buildings near to the Royal Infirmary, but form a single body governed by a Board elected by the Royal Colleges of Physicians and Surgeons and by the Lecturers This Board, with the assistance of the standing committees of the school, supervises the whole management and especially the maintenance of the efficiency and discipline of the school

The buildings at present utilized for the purposes of lecturing are the following (1) Surgeons Hall Nicolson Street (2) New School, Bristo Street (3) Dental Hospital Chambers Street Clinical classes are held in the Royal Infirmary Royal Maternity Hospital, and other institutions The teaching is similar to that of the Scottish universities and the students receive similar certificates at the close of each session There courses on the special subjects are also conducted by teachers specially qualified in each branch The fees payable for class

and other instruction and including the sums payable before admission to the examinations of the Conjoint Board for the Triple Qualification amount to about £200 The Calendar giving full information regarding classes and fees can be obtained (price 1s. post free) on application to the Dean of the School Surgeons Hall Edinburgh

Glasgow

The whole course of study required for graduation (M B, Ch B) at the University of Glasgow can be taken here Besides ample provision for lectures there is practical and clinical work at the hospitals and practical courses are conducted in the laboratories of the following departments pathology public health pharmacology physiology, surgery anatomy chemistry zoology physics and botany, the Botanic Garden and the Hunterian Museum are also open to students Well equipped buildings have been provided for zoology practical anatomy and operative surgery, as well as for pathology The classrooms and laboratories for the departments of botany physics physiology, pharmacology materia medica, medical jurisprudence and public health are also of recent erection and are elaborately equipped In addition to the regius chairs and the chair of pathology at the university there are the chairs of medicine surgery obstetrics and pathology at the Royal Infirmary and a number of university lectureships in clinical medicine clinical surgery venereal diseases laryngology dermatology otology, psychological medicine tuberculosis pathological biochemistry and medical radiology have been founded there Other chairs have been founded at the university in bacteriology organic chemistry physiological chemistry applied physics public health paediatrics and ophthalmology There are also lectureships on the surgical and medical diseases of children and on medical radiology The university in short has made great and successful efforts to extend and improve the accommodation of the medical departments, to strengthen the teaching staff and to encourage postgraduation and research work A diploma in public health is now also granted Three very extensive general hospitals in the city afford exceptional opportunities for clinical instruction—namely the Western Infirmary (600 beds) near the university to which the Regius Professors are attached, the Royal Infirmary (824 beds) and the Victoria Infirmary (380 beds) while the Royal Mental Hospital, Gartnavel (500 beds) the Royal Hospital for Sick Children (320 cots), the Royal Maternity and Women's Hospital (114 beds) the Glasgow Eye Infirmary (100 beds) the Ophthalmic Institution (35 beds) the fever hospitals at *Belvidere* (680 beds), *Ruchill* (540 beds) and Mearnskirk, and other institutions afford facilities for the practical study of special branches The large general hospitals of the town council are now also available for clinical instruction in medicine and surgery Information regarding postgraduate study will be found at page 529

Bursaries—Bursaries confined to the Medical Faculty amount in annual value to about £1 250 while bursaries in any faculty, amounting to about the same annual sum may be held by students of medicine a number of both sets being open to women Postgraduate scholarships approximate in value to £3 500 per annum

The following bursaries are open for competition to students entering on their first session of attendance in the Faculty of Medicine Davidson Bursary annual value £40 tenable for four years for students who propose before entering the Faculty of Medicine to take the degree of B Sc in pure science including in their curricula anatomy and physiology Highland Society (Glasgow) Bursaries annual value £25 each tenable for five years for students of Highland descent open to women two bursaries vacant each year Logan Bursary annual value £25 tenable for four years open to women Robina Eckford MacBrayne Scholarship annual value £50 tenable for three years Marshall Bursary annual value £24 tenable for four years Merchants House Bursary annual value £35 tenable for four years open to women John Oliphant Bursary annual value £35 tenable for six years James A Paterson Bursaries three each year of the annual value of £30 £25 and £15 respectively each tenable for four years students entering their second session are also eligible open to women examination in mathematics and natural philosophy

Candidates for the bursaries mentioned above must take the university general bursary competition which is held each year in the month of June

In addition the following bursaries scholarships and prizes are open to students prosecuting their studies in the Faculty of Medicine Arbroath Bursary annual value £35 tenable for three years is awarded by the Senate on the recommendation of the Faculty of Medicine to the student who is of the highest merit among the candidates as shown by their class records and their performances in the First and Second Professional Examinations Arthur Bursary annual value £20 tenable for three years awarded to the *woman* candidate who takes the highest place at the First Professional Examination Bell Bursaries annual value £50 each tenable for the duration of the course for students who have gone through the curriculum in arts tenable also in theology or law Brisbane Bursary annual value £50 tenable for four years candidates must be under 22 years of age and must have taken the degree of M A John Buchanan Bursary £80 for two years awarded at the beginning of the third year on the results of the First Professional Examination plus a modern language taken in the general bursary competition William Gardiner Bursary annual value £18 tenable for two years awarded on the results of the First and Second Professional Examinations in the subjects of physiology chemistry and physics Dr Thomas Gibson Bursary annual value £50 tenable for four years open to medical students entering on their second winter who are preparing for service as medical missionaries Johnston Bursaries annual value £25 each tenable for three years for eminence in the work and examinations of the first and second years of the curriculum Lorimer Bursaries (six) value £20 each tenable for one year are awarded to the best students in each of the following classes botany zoology physics chemistry anatomy physiology Macarthur Bursary of the annual value of £20 and tenable for two years for students entering on their fourth session of medical study Mactarlane Bursary annual value £40 tenable for three years for students who have attended the first session of their professional study in the university examination in elementary anatomy elementary chemistry and botany Mackinnon Bursary value £31 tenable for one year open to medical students of either sex who have attended one of the courses of lectures on insanity in the university examination in that subject John Monteith Bursary annual value £21 tenable for two years is awarded annually to the student who gains the highest number of marks in the subjects of anatomy and physiology at the professional examinations held during the previous year Rainy Bursary annual value £50 tenable for two years for students entering on their third session of medical study awarded to the candidate whose aggregate of marks in the subjects of anatomy and physiology of the Second Professional Examination and in chemistry botany and zoology of the First Professional Examination is the highest A and B Stewart Postgraduate Bursaries annual value £50 each, tenable for the duration of the course for *students who have gone through the arts curriculum* Walton Bursary annual value £40 tenable for four years the Earl of Sandwich has the right of appointing to the bursary one of two students nominated by the Senate Weir Bursary value £25 tenable for one year awarded on the results of the Second and Third Professional Examinations Barbour Scholarship in anatomy or physiology annual value £250 tenable for two years Joseph Coats Memorial Scholarship value £85 tenable for one year for research in pathology may be held concurrently with the Perman Memorial Scholarship (q v) Faulds Fellowship annual value £250 tenable for three years for medical research. Foulis Memorial Scholarship in pathology value £50 Hall Tutorial Fellowships approximately £250 for one year Four McCunn Medical Research Scholarships value £200 each, tenable for one year Perman Memorial Scholarship value £85 tenable for one year for research in pathology may be held concurrently with the Joseph Coats Memorial Scholarship (q v) Henderson Research Scholarship of about £250 per annum for research in mental diseases Hutchison Research Scholarship of the annual value of £110 for research in certain subjects of the medical curriculum Reid Stewart Postgraduate Bursary £200 for one year for special study and research renewable Mary Margaret Isabel Ure Scholarship of the annual value of about £300 for research in cancer or tuberculosis or other branch of study approved by the Faculty of Medicine John Reid Prize of £25 for the best original research conducted in one or more of the hospitals or scientific laboratories in

Glasgow, bearing on any department of medical science History of Medicine Prize, of about £50, for the best essay on some subject in the history of the science or practice of medicine other than a subject of recent development in some limited branch thereof Harry Stewart Hutchison Prize value £50 for original research work relating to children The Junior Arnott Prize of about £15 the Senior Arnott Prize of £25 Three Bellahouston Gold Medals The Brunton Memorial Prize of about £20 The Macewen Medal in surgery The Captain H S Ranken V C Memorial Prize of £5 The Straits Settlements Gold Medal The West of Scotland R A M C Memorial Prize of about £15 Asher Asher Memorial Gold Medal awarded annually in connexion with the class on diseases of the throat and nose Macfarlane Prizes of £10 each in each of the classes of medicine Macleod Medal, awarded annually to the most distinguished student, man or woman in the class of systematic surgery taught by the Regius Professor Struthers Gold Medal awarded in anatomy for the best original research or for the best special dissection or preparation or series of dissections or preparations

The Carnegie Trust for the Universities of Scotland is empowered to pay the whole or part of the university ordinary class fees of students of Scottish birth or extraction under conditions given in the University Calendar Scholarships and Fellowships are offered by the Carnegie Trust in science and medicine for postgraduation study

Fees—The matriculation fee for each year is £2 12s 6d In most cases the fee for each university class is £6 6s but in some cases it is £4 4s For hospital attendance at the Western Infirmary students pay £12 12s for a perpetual ticket, or £1 11s 6d for a single term ticket with an additional fee of £5 5s for each winter and £2 12s 6d per term for each clinical course The fees are the same at the Royal Infirmary The university fees for the four professional examinations total £34 13s For the whole curriculum the fees for matriculation class attendance, hospital attendance, and professional examinations amount to about £250

For further information apply to the Registrar, Glasgow University

ST MUNGO'S COLLEGE—This is the Medical School of the Royal Infirmary, which is the largest general hospital in Glasgow The Infirmary is situated in Cathedral Square, Castle Street, and has car communication with every part of the city St Mungo's College is in the Infirmary grounds, and affords full courses in all the subjects of the medical curriculum, and in all the medical subjects of the dental curriculum The Infirmary has (in addition to the ophthalmic department) 794 beds—554 for surgical and 240 for medical cases There are special beds and wards for diseases of women, of the throat, nose, and ear, burns, and septic cases The number of in-patients treated last year was 18,154, while 120,461 were treated in the out-patient department In addition to the large medical and surgical departments, there are departments for special diseases—namely, diseases of women, of the throat and nose, of the ear, of the eye, of the skin, and of the teeth There is also a fully equipped electrical pavilion, with the latest and most improved apparatus for diagnosis and treatment

Appointments—Six house physicians and eight house-surgeons who must be fully qualified are appointed every six months, and board in the hospital free of charge Clerks and dressers are appointed by the physicians and surgeons As many cases of acute diseases and accidents of a varied character are received these appointments are very valuable

Fees—The fees for all the lectures practical classes, and hospital attendance necessary for candidates for the diplomas of the English or Scottish Colleges of Physicians and Surgeons amount to about £120 The classes are open to male and female students

A syllabus of classes can be obtained on application to the Secretary to the Medical Faculty, St Mungo's College, 86, Castle Street

THE ANDERSON COLLEGE OF MEDICINE—This school provides education in the subjects of the curriculum for both medical and dental students The school buildings are situated in Dumbarton Road, immediately to the west of the University and Western Infirmary The hospital practice and clinical lectures are provided in the Western or Royal Infirmary, pathology in the Western or Royal Infirmary, vaccination and dispensary practice in the Western or Royal Infirmary Dispensary These classes are recognized by all the licensing corporations in the United Kingdom, also by the Universities of London, Glasgow, and Edinburgh (the latter two under certain conditions stated in the School Calendar)

Fees—The fees for the lectures and practical work required by ordinary students range between 2 and 6 guineas a class The Carnegie Trust pays the fees of students at Anderson College on conditions regarding which particulars may be obtained from the Secretary, Carnegie Trust Offices, Edinburgh

A Calendar will be sent on receipt of a postcard by the Secretary to the Medical Faculty the Anderson College of Medicine Glasgow, W 1, who will forward any further information which may be desired

The Royal Samaritan Hospital for Women, Glasgow has 190 beds, of which thirty are for paying patients of limited means, and offers excellent facilities for clinical instruction in the diseases peculiar to women Lectures and clinical demonstrations are given by members of the surgical staff There is a complete course each university term for university students and one course in the summer term for college students A postgraduate course is held during the summer months and a series of demonstrations for general practitioners is carried out in the winter The hospital is represented on the Board of the Glasgow Postgraduate Medical Association, formed for co ordinating postgraduate medical teaching The Royal Samaritan lectureship in gynaecology is a university lectureship associated with the hospital

St Andrews and Dundee

The medical departments in these two teaching centres cater specially for students proceeding to the degrees of the University of St Andrews, but admit other students as well In the former city the United College provides education in all subjects for the first two years In Dundee, University College provides for the needs of students from the beginning to the end of the five years' curriculum Its buildings are modern, and contain fully equipped laboratories The clinical work of the school is facilitated by various institutions

The class fees are from £6 6s to £5 12s 6d for systematic classes, and from £4 14s 6d to £4 4s for practical classes The hospital ticket is £1 8s for three months, £4 4s a year, or perpetual £13 6s 8d in one sum The inclusive or composition fee for the curriculum is £182 In connexion with both institutions there are bursaries and scholarships of considerable value which are awarded after competitive examination Information as to these can be obtained from the Secretary of the University of St Andrews Information regarding the clinical facilities may be obtained from the Dean of the Medical Faculty, Medical School, Dundee

CLINICAL WORK

Good opportunities for clinical work are afforded by the Dundee Royal Infirmary and Maryfield Hospital the instruction given therein being recognized for purposes of graduation by all the Scottish Universities the University of Cambridge the University of London, the National University of Ireland, and by the Royal Colleges of England and Scotland

IRELAND

There is a choice of six schools for those pursuing their medical studies in Ireland For clinical instruction the choice is equally wide and varied, though the hospitals themselves are comparatively small Some account of the schools follows

Dublin

SCHOOL OF PHYSIC

The School is in Trinity College, Dublin, and is carried on under the auspices of the University of Dublin The four King's Professors of Medicine (Physiology, Practice of Medicine, Materia Medica and Midwifery) and the Professor of Anatomy appointed by the Board

Clinical instruction is given at Sir Patrick Dun's Hospital and the instruction given at sixteen other metropolitan hospitals and asylums is recognized by the Board of Trinity College

THE SCHOOLS OF SURGERY

These are schools carried on in Dublin under the supervision and control of the Council of the Royal College of Surgeons They are formed of the college's own school combined with two famous old medical schools—Carmichael and Ledwich they are attached to the college by charter The buildings contain spacious dissecting rooms special pathological bacteriological and chemical laboratories Advantage can be taken of the lectures and instruction afforded by students otherwise unconnected with the college

Prizes—Among the prizes annually awarded are The Barker Anatomical Prize (£26 2s) the Carmichael Scholarship (£15) the Mayne Scholarship (£8) the Gold Medal in surgery the Stoney Memorial Gold Medal in anatomy the H Macnaughton Jones Gold Medal for midwifery and gynaecology the Captain Mackey Miles Memorial Prize class prizes accompanied by silver medals will also be given in each subject

A prospectus can be obtained post free on application to the Registrar Royal College of Surgeons Dublin

UNIVERSITY COLLEGE DUBLIN

This is one of the constituent colleges of the National University of Ireland The arrangements for the teaching of medical students from beginning to end of the curriculum are adequate Applications for information may be addressed to the Secretary and Bursar University College Dublin

CLINICAL TEACHING IN DUBLIN

Two other important obstetric and gynaecological hospitals in Dublin are the Coombe Lying in Hospital and the National Maternity Hospital During the year 1934 the number of cases dealt with in the Coombe Lying in Hospital were as follows intern maternity department total admissions 1,504 total deliveries in hospital 1 254 extern maternity 1 491 deliveries gynaecological department, admissions 517 Attendance at pre natal clinic baby and general dispensaries 12 000 cases yearly The practice of these hospitals is attended by large numbers of students postgraduates and nurses, who come from all parts of the world

There are numerous well arranged hospitals in and around the city and almost all of these are recognized for teaching purposes by the Conjoint Board of Ireland the University of Dublin the National University of Ireland and by like bodies elsewhere in the British Isles Among them are the Mater Misericordiae Hospital with 345 beds Dr Steevens Hospital at Kingsbridge with 150 Meath Hospital and County Dublin Infirmary with 160 Mercer's Hospital with 120 the Royal City of Dublin Hospital with 124 the Adelaide Hospital with 160 the Royal Victoria Eye and Ear Hospital with 100 Sir Patrick Dun's Hospital which has a direct connexion with the School of Physic with 129 beds and the combined institutions formed by the Hardwicke Fever Hospital the Richmond Surgical Hospital and the Whitworth Medical Hospital with an aggregate of 330 beds Other hospitals are the Children's Hospital Temple Street with 125 beds the National Children's Hospital with 53 beds St Ultan's Infants Hospital with 52 beds St Mary's Orthopaedic Hospital at Cappagh with 236 beds and St. Anne's Skin and Cancer Hospital with 60 beds

As for the famous Dublin medical institution known as the Rotunda Hospital this practically consists of two distinct hospitals and it is believed to be the largest combined maternity and gynaecological hospital in the British Isles There are pre natal and paediatric departments as well as a thoroughly equipped pathological laboratory biochemical laboratory and x ray department It possesses residential quarters for students accommodating over fifty and taken as a whole offers exceptional opportunities for study both to ordinary students and to medical graduates of any nationality During the year ending October 31 1934 there were 3 173 maternity admissions Including patients treated in their homes the Rotunda dealt with 5,372 cases during the year of which 4 688 were delivered In the gynaecological department there were 687 admissions of which 333 were operated upon The attendances at the out-patient department totalled 20 736 Extensive alterations and additions to the hospital are being undertaken

The National Maternity Hospital is now housed in new buildings This hospital is of the most modern and up-to-date type both in lay out and in equipment. It contains many novel and original features and much of the equipment and furniture has been specially designed It is run entirely on electricity no other fuel being used At present it consists of accommodation for some eighty five patients, together with all central services and excellent accommodation for students and staff This new building was opened for the admission of patients on January 1 1933 The old hospital has been abandoned and is being demolished to make room for the building of the final wing of the new hospital to accommodate sixty-five additional beds. During the year 1934 the hospital dealt with 2,367 maternity cases of which 2,019 were delivered In the gynaecological department 351 patients were admitted The attendances at the out patient department were 7 852 Clinical instruction is given daily

Belfast

The Medical School is part of the Faculty of Medicine of Queen's University Belfast, and provides a complete medical curriculum for all purposes The laboratories in the departments of bacteriology biochemistry biology chemistry, physiology pathology public health, anatomy, physics and materia medica are all excellent and there is a students union which gives students the advantages of dining rooms reading rooms a library and various recreation rooms Women are eligible as students Clinical instruction is given at the Royal Victoria Hospital which was rebuilt a few years ago and has 500 beds of which 64 are in the Royal Maternity Hospital and the Mater Infirmorum Hospital which has 150 beds Other hospitals open to the students of the university are the Ulster Hospital for Women and Children the Hospital for Sick Children the Ophthalmic Hospital the Benn Ulster Eye Ear and Throat Hospital the Union Infirmary and Fever Hospital the Fever Hospital, Purdysburn the District Lunatic Asylum the Samaritan Hospital the Forster Green Hospital for Diseases of the Chest and the Belfast Hospital for Skin Diseases

Scholarships—(1) Eight of the value of £40 each are assigned as Entrance Scholarships in the Faculties of Arts, Science and Medicine tenable for one year (2) fourteen Professional Scholarships value from £15 to £40 each (3) one Hutchinson Stewart Scholarship £12 in mental diseases (4) one Mackay Wilson Travelling Scholarship £100 awarded triennially (next award 1939) (5) Isabella Tod Memorial Scholarship tenable for three years awarded triennially to a woman student (6) Magrath Clinical Scholarship awarded annually value about £112 (7) two Musgrave Studentships of £200 in physiology and pathology There is also a post-graduate research fund open to all graduates of not more than three years standing Gold medals are awarded at the M D examination

Fees—The cost of the curriculum intended for students proceeding to the degrees of the Queen's University of Belfast is approximately £230 This includes examination fees and a perpetual ticket for attendance at the Royal Victoria Hospital or the Mater Infirmorum Hospital and fees for the special hospitals The course for the Conjoint Board costs about the same amount

The Regulations of the Medical Faculty containing full information can be obtained on application to the Bursar Queen's University Belfast price 4d by post 6d

University College, Cork

This institution, formerly known as Queen's College, Cork is one of the constituent colleges of the National University It holds examinations for all the faculties of that university, in addition to continuing the work which it has hitherto performed—namely that of providing education adapted to the needs of medical students at all stages of their

career Its first aim is to fit students for the degrees of the National University, but students proceeding to the examinations of the Conjoint Board of England, Scotland, or Ireland, the Society of Apothecaries of London or the Apothecaries Hall of Ireland, or London University, can arrange the courses of lectures which they attend, and the order in which they attend them, to meet the requirements of those bodies Certificates of attendance at the college courses are also accepted by the University of Cambridge Clinical instruction is given at the North and South Infirmaries (each 100 beds) and at the Cork Union Hospital (1 200 beds) Students can also attend the Mercy Hospital (130 beds), the County and City of Cork Lying in Hospital, the Hospital for Diseases of Women and Children, the Fever Hospital, the Ophthalmic and Aural Hospital, and the Eglinton Lunatic Asylum The session extends from October to June

Scholarships—About £2 500 is available annually for scholarships in the college Particulars as to each of them can be obtained on application to the Registrar

Fees—The fees for the lectures and hospital attendances required by the National University of Ireland course, including examination fees come to about £200

Further information can be found in the Calendar, or obtained on application to the Registrar

University College, Galway

This institution is one of the constituent colleges of the National University of Ireland, and includes Faculties of Art, Science, Law, Celtic, Engineering, Commerce, and Medicine The college buildings are well lighted and well ventilated, and contain dissecting rooms, an anatomical theatre, and laboratories for the study of physiology, chemistry, physics, and other departments of medical science For pathology and chemistry new laboratories are now provided It has good grounds surrounding it, and there are many arrangements, such as a library, a college union, and an athletic union, for the benefit of those belonging to the Medical Faculty, as well as for students in other departments of the college The clinical teaching, which is recognized as qualifying not only for the degrees of the National University but for those of the London University and the diplomas of the various colleges in the three kingdoms, is carried on at the Galway Central Hospital and the Galway Tuberculosis Hospital

The Galway Central Hospital is a general hospital, and at the two hospitals students have ample opportunities of studying zymotic and chronic diseases The Central Hospital has a special ward for diseases of children Each year the governing body offers about £2 500 and the County Councils of Connaught offer about £3 500 in scholarships These scholarships are tenable in any faculty Additional information regarding these scholarships can be obtained on application to the Registrar and to the Secretaries of the Connaught County Council

CLINICAL HOSPITALS IN ENGLAND

Many hospitals in Great Britain and Ireland, though not connected with any medical school, open their doors either to those who have yet to be qualified, to those who are doing postgraduation work, or to both The facilities they offer for gaining practical clinical experience are very great, and should not be overlooked Their honorary staffs commonly make a point of giving such instruction as opportunity offers, and at those situated in the larger towns there are often appointments as clinical assistants to be obtained In addition, they all have to offer, at shorter or longer intervals, appointments for resident medical officers, house-physicians, and house surgeons These are usually paid offices, which may be held for periods varying from six months to a year, or even longer Some of those [illegible]ted in the great medical centres in the provin[illegible]n Scotland and Ireland, have already been m[illegible] speaking of the medical schools in these localities, but it should be added that there are many other provincial hospitals where admirable work is done, and at which much valuable experience can be gained by both senior and junior students, and by those already qualified

Cases in point are the Royal Infirmary, Bradford, the Royal Sussex County Hospital, Brighton the Royal United Hospital Bath, the Worcester General Infirmary, the Kent and Canterbury Hospital the Derbyshire Royal Infirmary, South Devon and East Cornwall Hospital Plymouth, the Royal Albert Hospital and Eye Hospital Devonport, the Royal Devon and Exeter Hospital, the West of England Eye Infirmary, Exeter, the Gloucestershire Royal Infirmary and Eye Institution, the Royal Infirmary, Leicester, the County Hospital Lincoln, the General Hospital Northampton the Norfolk and Norwich Hospital, the General Hospital, Nottingham, the Royal Portsmouth Hospital, the Royal Berks Hospital Reading, the Royal South Hants and Southampton Hospital, the Staffordshire General Infirmary, Stafford, the North Staffordshire Royal Infirmary at Stoke-on Trent the Royal Hants County Hospital, Winchester, the Wolverhampton and Staffordshire General Hospital, the County Hospital York, and the Coventry and Warwickshire Hospital

London Clinical Hospitals

As for the hospitals in the metropolis, so many of these take a share in the giving of clinical instruction that it is worth while to classify them

Children's Hospitals—There are at least seven of these the leader among them being the Hospital for Sick Children Great Ormond Street which has 268 beds There are also the Princess Elizabeth of York Hospital for Children, Shadwell, with 136, the Queen's Hospital for Children Bethnal Green, with 134, the Victoria Hospital for Children Chelsea, with 130, the Belgrave Hospital for Children, which has a considerable out patient department and in patient accommodation for 74 children the Paddington Green Children's Hospital, and the Evelina Hospital for Sick Children Southwark Bridge Road, with 76 beds The largest and the oldest of the hospitals for both women and children is the Royal Waterloo Hospital for Children and Women, Waterloo Road, S E 1

Hospitals for Women—Queen Charlotte's Maternity Hospital Marylebone Road with 100 beds and a residential college for medical students and practitioners, specializes in the teaching of midwifery The first section of the new Queen Charlotte's Hospital in Goldhawk Road Hammersmith an isolation block of 30 beds for cases of puerperal fever and puerperal pyrexia, was opened in July, 1930 The Bernhard Baron Research Laboratories, immediately adjoining the isolation block, were opened towards the end of 1930 and are fully equipped and staffed The City of London Maternity Hospital and Midwifery Training School, City Road, E.C.1, was founded in 1750 and has kept pace with the advancement in medical and nursing science There are 71 beds (8 private) The training of pupil midwives has always been an important feature of the hospital's work There are the following special departments ante natal clinics, remedial exercises clinic, post natal clinic, and dental clinic, child welfare clinic, sunlight and radiant heat clinics A two or four weeks resident midwifery course is available for male medical students, and occasional week end (non resident) post graduate courses for general practitioners The Samaritan Hospital for Women, Marylebone Road, admits qualified practitioners as clinical assistants to both the in patient and the out patient departments, demonstrations are given daily in both departments, the fees—payable in advance—being £3 3s. for three months full particulars may be obtained from the secretary In addition may be mentioned the Hospital for Women, Soho Square, whose teaching is confined to post graduates in limited numbers the Chelsea Hospital for Women Arthur Street Chelsea, and the Elizabeth Garrett Anderson Hospital for Women in Euston Road the latter being in the nature of a general hospital so far as concerns the class of case treated

Eye Hospitals—The largest of these is the Royal London Ophthalmic Hospital (Moorfields) City Road, E.C.1, 200 beds 4,388 in patients, 64 799 out patients in 1936 At this hospital two complete courses of instruction are given during the year —October to February, and March to July—comprising the following subjects (1) anatomy (including histology and embryology), (2) physiology (3) optics (including physiolo-

optics) (4) refraction (5) methods of examination and the use of the ophthalmoscope (6) pathology and bacteriology (7) *ophthalmic medicine and surgery* (8) ophthalmoscopic conditions (9) operative surgery (10) practical pathology (11) practical bacteriology (12) radiology (13) physiotherapy (including ultra violet light diathermy and ionization) (14) orthoptic training (15) contact glasses (16) slit lamp microscopy Registered medical practitioners and medical students are eligible under certain conditions for the posts of chief clinical assistant clinical assistant and junior assistant There are also a number of salaried posts an annual Clinical Research Scholarship of £50 and a biennial Gifford Edmunds Prize of £100 Clinical work begins each morning at 9 and operations at 10 o clock The course of instruction is specially adapted to meet the requirements of those reading for the D O M S and similar diplomas and degrees in ophthalmology The Out patient Department Medical School and Laboratories have been rebuilt and enlarged Further particulars may be obtained from the Dean of the Medical School

Other eye hospitals are the Royal Westminster Ophthalmic Hospital now rebuilt on a new site in Broad Street High Holborn and containing 84 beds the Royal Eye Hospital Southwark and the Central London Ophthalmic Hospital Judd Street W C 1 each with about 40 beds and the Western Ophthalmic Hospital with 35 beds including ten single bed wards At the Royal Eye Hospital special classes are held in May and October to meet the requirements of students pre paring for the D O M S and similar examinations Clinical classes in medical ophthalmology are held for candidates for the M R C P examinations A course suitable for general practitioners is held in April under the auspices of the Fellow ship of Medicine The pathological and bacteriological depart ments are available to ophthalmic surgeons and institutions desiring reports on specimens cases of interest being dealt with without charge A research scholarship in ophthalmology to the value of 100 guineas per annum is awarded yearly

Fever Hospitals—The London County Council has under its control a number of institutions in and around London for the treatment of the more serious zymotic disorders it makes special arrangements for the instruction of students in this subject and grants certificates at the end of the courses The fees for medical undergraduate and postgraduate instruc tion at the L C C hospitals for infectious diseases including small pox are as follows Course in diagnosis and treatment of fevers three guineas for two months course Course in clinical practice and hospital administration (for candidates for the D P H) three and a half guineas for twenty four demonstrations and four guineas for thirty demonstrations Course in diagnosis and treatment of small pox (in cases in which a fee is payable) one guinea for three demonstrations Detailed information should be sought from the Medical Officer of Health Special Hospitals Division London County Council County Hall S E 1

Chest Hospitals—The largest of these is the Brompton Hos pital for Consumption which has 333 beds and a large sana torium at Frimley with 150 beds There is also the City of London Hospital for Diseases of the Chest Victoria Park, with 185 beds and the Royal Hospital for Diseases of the Chest, City Road with 85 beds now amalgamated with the Royal Northern Hospital Holloway Road

Nose Throat and Ear Hospitals—The institutions which confine their work to disorders of the throat nose and ear all make special arrangements for the benefit of senior and postgraduate students They are the Metropolitan Ear Nose and Throat Hospital Fitzroy Square the Royal Ear Hos pital Huntley Street W C 1 (now the Ear Nose, and Throat Department of University College Hospital) the Central London Throat Nose and Ear Hospital Gray s Inn Road and the Golden Square Throat Nose and Ear Hospital near Piccadilly Circus W 1—the last- which possesses 101 beds being the largest of the four institutions

Miscellaneous Special Hospitals—Among these are the Bethlem Royal Hospital recently transferred from Kenning ton to Monks Orchard Eden Park Beckenham Kent, which (like the Maudsley Hospital) confines its work to the treatment of mental diseases and includes a department for nervous and early mental disorders the Royal National Orthopaedic Hospital Great Portland Street St Peter s Hospital for Stone and Urinary Diseases Henrietta Street Covent Garden St Mark s Hospital City Road which devotes itself to the treatment of diseases of the rectum in cluding cancer and fistula St Paul s Hospital Endell Street Holborn W C 2 where continuous postgraduate work in genito urinary disease is carried on with cystoscopy sessions three days a week and two regular postgraduate courses are held each year the National Hospital for Diseases of the Heart in Westmoreland Street W 1 St John s Hospital for Diseases of the Skin in Leicester Square the Hospital for Diseases of the Skin 71 Blackfriars Road S E 1, the National Hospital Queen Square W C 1 an institution possessing 200 beds for neurological cases and a world wide reputation the West End Hospital for Nervous Diseases 73 Welbeck Street W 1 and the Maida Vale Hospital for Nervous Diseases founded in 1866 and renamed on more than one occasion

Detailed information as to the teaching arrangements of all these institutions may be obtained on application to their secretaries

Women in Medicine

The regulations of the General Medical Council and of the various universities and colleges set out in previous sections apply to women as to men

Examinations

Women are admitted to all the medical examinations of the following qualifying bodies all the universities of Great Britain and Ireland, the Royal College of Physicians of London, the Royal College of Surgeons of England the Society of Apothecaries of London and the Conjoint Boards of the Colleges in Scotland and in Ireland In addition women are eligible for election as Fellows of the Royal College of Physicians of London the Royal College of Physicians of Edinburgh, the Royal College of Surgeons of Edinburgh and the British College of Obstetricians and Gynaecologists

Medical Education

In this country at the present time co education is the general rule Most of the schools of the London hospitals have, however, so far shown themselves more con servative in this respect than the rest of the country

In England the colleges connected with the universities of Birmingham Bristol Cardiff Durham, Leeds Liver pool Manchester, Newcastle and Sheffield admit women students as well as men whilst in Scotland the universities of Aberdeen, St Andrews, Edinburgh and Glasgow also admit women In Ireland all universities and colleges are open to them

In London the schools open to medical women students are the London School of Medicine for Women and the West London Hospital and to a modified extent University College Hospital and King s College Hospital

At the present time it will be seen that the only co education hospitals in London are University College and King s College The number of women entrants is re stricted but they are given excellent opportunities whilst students, and also, in fair proportion, are given oppor tunities of postgraduate experience as residents, house surgeons, house physicians, and obstetrical assistants

Number of Women Students

Returns made to the University Grants Committee show that the total number of full time women medical and dental students attending university institutions in England Scotland and Wales during recent years were

	1925 6	1927 8	1929 30	1931 2	1933-4	1935 6
England	1 059	862	842	910	1 046	1 185
Wales	30	30	19	40	54	62
Scotland	313	254	275	322	425	500
Total	1 402	1 146	1 136	1 272	1 525	1 747

The corresponding total number of full time male students of medicine, including dentistry, was 11,176 in 1935–6

The London (Royal Free Hospital) School of Medicine for Women

The London (Royal Free Hospital) School was started for the training of women in medicine in the days before there were any co-education facilities for them, and it still remains by far the largest school for women In addition to the clinical work at the Royal Free Hospital, which at present has upwards of 330 beds, arrangements are made for students of the school to obtain clinical instruction at the National Hospital for Nervous Diseases, Queen Square, the Royal London Ophthalmic Hospital, Moorfields the Great Ormond Street Hospital for Children, the Elizabeth Garrett Anderson Hospital, the South London Hospital for Women, the Cancer Hospital, the Central London Ophthalmic Hospital, and certain hospitals administered by the L C C Its importance for women in medicine can hardly be overestimated, not merely because it was the pioneer which made the way possible, but also because it is still the only general hospital in Britain which offers all its postgraduate appointments, higher and lower, to open competition by women as well as men, thus giving unique opportunity of gaining experience Not only are all the resident appointments at the Royal Free Hospital, of which there are twenty-seven yearly, eligible for women, but, in addition, higher posts may be obtained in all the various branches of a general hospital, from those of registrar and anaesthetist to those of visiting physician or surgeon and those in charge of special departments There is a special unit in gynaecology under a woman professor and entirely staffed by medical women This policy has so far not been fully adopted in its entirety by any other hospital It may be of interest to note in this connexion that the Royal Free Hospital has many women on its general committee and weekly board of management, and that the chairman of the latter is, at present, a woman

Openings for Medical Women

There are at the present time the names of over six thousand medical women on the *Medical Register* There is an increasing demand by the public for the services of women doctors, and the profession of medicine with its many and varied branches offers ample opportunity for a useful career

Opportunities at Home

Since the number of men and women qualifying has reached normal standards, medical women find no difficulty in obtaining house appointments in the recognized teaching hospitals and in non-teaching hospitals, hospitals for women and children, sanatoria, etc The reorganization of hospitals under local authorities has resulted in the creation of a number of new resident appointments, senior and junior, intended to be held by medical women

General Practice—There are good openings as assistants or better still as assistants with a view to admission as partners in general practice Medical women also do very well when starting in new districts and there is considerable scope for them in midwifery work

Specialist and Consulting Practice—The number of women doing specialist and consultative practice grows rapidly There is no branch of medicine in which it is not possible for a patient to consult a medical woman Women so specializing equip themselves by obtaining the highest essential qualifications and it is hoped that the time is not far distant when many more women will hold positions on the honorary staffs of all hospitals Already medical women are on the honorary staff of the Royal Free Hospital London and of general hospitals in a number of provincial cities In London Edinburgh Glasgow Manchester Bristol and Brighton there are hospitals staffed entirely by medical women doing very fine work and meeting a real need the latest to be opened being the Marie Curie Hospital in London for the treatment of cancer by radium Research work also provides interesting openings as for example in dealing with the special problems concerning cancer nutrition puerperal morbidity and mortality, statistical work etc and for some of these research scholarships and grants are available

Teaching Posts—Women hold professorships and lectureships at various universities

Industrial Medicine—In this branch there is some interesting work available, and it is undergoing considerable development at the present time Several women already hold such posts

Administrative Work—A certain number of these important posts are admirably filled by medical women At the Ministry of Health the department for maternity and child welfare is staffed by medical women Medical women also hold administrative posts under the Home Office the Board of Education the Boards of Control of both England and Scotland the Post Office etc

The Public Health Service—This service provides numerous openings for medical women It has many departments, and its rapid growth in recent years has provided much interesting work in preventive medicine Senior departmental posts are frequently held by medical women and several occupy posts as medical officers of health For maternity and child welfare work women have been found to be peculiarly suited but, by a curious economic limitation married women who would appear to be the most suitable of all, have been, by many public authorities excluded from service A change of attitude however appears now to be taking place, as was evidenced by the decision of the London County Council to withdraw its ban against the employment of married medical women in its Public Health Service

Medical Inspection etc—Under the Board of Education there are women serving as medical advisers and school medical inspectors The London County Council and other important councils in the country have medical women on their permanent medical staffs in both the senior and the junior grades The London County Council has two of its senior women appointed to serve as district medical inspectors. In addition they have a large number of women medical inspectors of school children, and also women are serving as experts in the departments dealing with mental deficiency, tuberculosis, and venereal disease Some medical women also serve as examiners of the candidates entering the public services, as, for example, the civil service The services of medical women are extensively enlisted by public authorities in dealing with employees of their own sex In several instances women serve as assistant medical officers to prisons The services of medical women are also enlisted as lecturers and examiners on first aid, home nursing, health, and infant care

Opportunities Abroad

Colonial Office—To those to whom oversea service appeals it offers the possibility of useful, interesting and adequately paid work At present there are posts for women in Malaya, and East and West Africa The work is almost entirely hospital and maternity and child welfare work there have been one or two specialist appointments, such as bacteriologists and more may follow Women have, so far, only been appointed to the lower grade posts, but their pay is the same as that of the men in similar grades When placed on the permanent staff they are eligible for pension

Egypt—Appointments in the Kitchener Memorial Hospital Cairo, which forms part of the Clinical Faculty of the University of Cairo are held by women Appointments in certain dispensaries are open to medical women There are also posts held under the education authority, chiefly school medical inspection

India—See note on the Women's Medical Service for India on page 525

Mission Field—Missionary societies offer employment to medical women chiefly in India China, and the Near East, where their services are urgently needed There is a wide field of opportunity abroad for those with the missionary spirit and who are fitted for very hard work under conditions which may be difficult (see special article on Medical Missionaries at page 549

Public Activities

Medical women are frequently appointed to serve on Royal Commissions and Government Committees dealing with medical subjects, and are also requested by them to give evidence of an expert medical nature

Medical women have always shown considerable interest in medico-political affairs, and take an active part in the

work of the British Medical Association and with the various other societies dealing with medicine as it affects the community in general With this end in view they also have a Medical Women's Federation which enables them to voice a collective expression of opinion This might otherwise be difficult to ascertain, as women are so widely scattered, as regards both their geographical distribution and their varied activities This collective opinion of medical women has been found of great assistance by the British Medical Association and other allied societies with which it works in cordial co operation and by whom it is frequently approached both for information and also as a convenient means of approaching medical women as a whole

It may be added with regard to contributions to medical literature, that this is a branch of work in which women are more and more taking their share and scientific and other works are frequently published by them

WOMEN'S MEDICAL SERVICE FOR INDIA

Among careers open to medical women abroad the Women's Medical Service for India deserves honourable mention This Service is open to fully qualified medical women of British or Indian nationality and with the present amount of Government subsidy the number of medical officers is limited to forty four

Medical women proceeding to India to join the Women's Medical Service receive a sufficient sum for a first class passage to India On landing they are posted to one of the larger women's hospitals to gain Indian experience and to learn the language For a further period they are appointed to act temporarily for medical women on furlough They are then definitely appointed to the charge of hospitals Private practice is allowed provided it does not interfere with official duties The only exception is in administrative or educational posts when an allowance in lieu of practice is given The amount obtained from practice varies according to the station but in most cases it forms a fair addition to the salary, varying from £150 to £1 000 a year

Excellent opportunities for surgery—especially gynaecological—are found in the Women's Medical Service In the future opportunities are likely to open in connexion with maternity and child welfare Rates of pay are as follows

Years of Service	Oversea Allowance per Mensem	Salary per Mensem	English Equivalent per Annum
1 to 3	Rs 100	Rs 450	£495
4 to 6	Rs 100	Rs 500	£540
7 to 9	Rs 100	Rs 550	£585
10 to 12	Rs 100	Rs 600	£630
13 to 15	Rs 150	Rs 650	£720
16 to 18	Rs 150	Rs 700	£765
19 to 21	Rs 150	Rs 750	£810
22 to 24	Rs 150	Rs 800	£855
Over 24	Rs 150	Rs 850	£900

* At rupee value 1s 6d

Furnished quarters are provided representing an additional Rs 150 per mensem

The cost of living in India is much higher than formerly but it should be possible for a medical woman (with house provided) to meet actual household expenses for about Rs 350 per mensem leaving the remainder of her salary for dress and personal expenses To this must be added the necessary saving to meet additional expenses for furlough and leave spent in the hills

Leave on average pay is earned at the rate of two elevenths of the period spent on duty

Study leave is granted to the extent of twelve months in the total service and will not be granted more than twice in the course of an officer's service During study leave an officer draws half average pay with a study allowance at the rate of 12s a day during the course of study Officers of European domicile are entitled to four free return first class passages from a port in India to a port outside India in their whole service The first passage is not granted until after the expiry of four years approved service and thereafter passages may be granted at intervals of not less than four years There is a Provident Fund to which members of the Service contribute 10 per cent of their pay The Service contributes another 10 per cent which accumulates at interest and is repaid on retirement

Admission to the Service is made by selection in India and England preference being given to those with Indian experience Vacancies are few Candidates in the United Kingdom should apply to the Medical Adviser Countess of Dufferin's Fund c/o The High Commissioner for India India House Aldwych London W C 2 Candidates in India should apply to the Chief Medical Officer Women's Medical Service Countess of Dufferin's Fund Simla and Delhi

Postgraduate Study

Postgraduate students may be divided into general practitioners desirous of refresher courses, usually covering a wide field within a relatively short period of time to bring their knowledge up to date those who wish for instruction in special subjects with a view to obtaining one of the special diplomas or of preparing for some higher examination perhaps with a view to promotion in one or other of the medical services or if already general practitioners of adding some form of specialism to their work and visitors whether from the oversea Empire or from foreign countries who wish to pursue intensive studies in special subjects or to familiarize themselves with the methods of practice in Great Britain Further mention may be made of medical members of the Defence Services who for reasons similar to these constitute an important section of postgraduate students, and of other students, largely from Australia New Zealand India and Egypt, who having completed the ordinary medical curriculum wish to pursue their studies further before returning to their own countries

It is clear that London with the large and varied amount of material available and with its wealth of professional skill and teaching power offers ample opportunity for the supply of all these needs There have for many years been teaching centres in London which have done and are still doing admirable work but they are widely scattered and their efforts are limited Two hospitals—the West London Hospital at Hammersmith and the Prince of Wales's General Hospital at Tottenham—have postgraduate schools attached to them Their efforts are valuable and praiseworthy but they cater mainly for practitioners whose practices are within a relatively short distance of the schools The general practitioner may also perhaps find a refresher course at the hospital at which he was trained held during a vacation and other courses are organized from time to time at some of the London hospitals general or special The Fellowship of Medicine, too, arranges definite courses of study at individual hospitals and at its office—generously placed at its disposal by the Royal Society of Medicine at 1, Wimpole Street W 1—a list of hospitals special and general, to which medical graduates may resort with or without fee, is kept, and the names of the teachers at each hospital are available Such information is also available at the House of the British Medical Association

More unified systematized and comprehensive provision, however, is now established at the British Postgraduate Medical School in Ducane Road Hammersmith It is more than fifteen years since a committee, presided over by the Earl of Athlone reported that there should be a school attached to a hospital centrally situated in London devoted solely to postgraduate medicine as a school of the university The school under the auspices of the University of London and of the London County Council, was opened by King George V in 1935

At that time the chairman of the Governing Body was the late Sir Austen Chamberlain He has been succeeded in that office by Sir John Caulcutt The School is recognized as a constituent college of the University of London and the London County Council has reorganized its hospital to adapt it for its enlarged purposes It has been

extended and fitted with the most modern equipment The Dean of the School is Colonel Proctor, a distinguished body of professors and readers in several departments of medicine has been appointed The school suffers from some disadvantages It is somewhat remote from the university quarter, and access to it is not very convenient Wood Lane and East Acton are its nearest railway approaches The facilities it offers to students are not yet as well known as they should be Nevertheless, although it has not yet achieved the imperial role, or the even wider reputation, which King George wished for it in his speech at the opening, the school is the most important postgraduate centre of a general kind in Great Britain, and is steadily attracting to itself a wider clientele It is organized in four major departments—medicine, surgery, obstetrics and gynaecology, and pathology a fifth department—radiology—is now in being, and a sixth—anaesthetics—is being developed In all these departments there is abundant opportunity and material for instruction of the highest type and with differing objectives No special courses or coaching classes are held for particular examinations, but the general work provided is of a suitable standard for those working for them A good deal of research is carried on, and the relatively few students of a senior standard who are attracted to research problems are invited to interest themselves in and to participate in investigating work of this kind

A very important development of postgraduate study facilities has taken place during the past year By arrangement with the Ministry of Health such facilities are now afforded for a considerable number of insurance practitioners Under this plan for 1938 over 800 places are available in England and about 100 in Wales and 250 in Scotland In England over 400 practitioners are to be accommodated in London, and a number varying from twenty to eighty in Oxford, Cambridge, the other English universities with medical faculties, and in Nottingham, severally The conditions governing grants from the Ministry to a practitioner attending such a course are (1) that five years have elapsed since the date of his first registrable qualification, (2) that he has not less than 300 (or in a rural practice 150) insured persons on his list, (3) that no grant will be made to a practitioner more than once in five years A grant covers the following items (1) a fee for the course but not exceeding five guineas unless specially sanctioned, (2) travelling expenses, (3) subsistence expenses incurred, not exceeding five pounds a week if the practitioner sleeps away from home, or one pound in other cases, (4) a sum not exceeding eight guineas a week, where necessary, for a whole-time locumtenent During the first year of this arrangement there were about three times as many applicants as there were places available The courses are regarded generally as satisfactory, but there have been some criticisms which are being noted for future guidance

With regard to special fields of work there has been a steady increase in the demand for postgraduate instruction in the psychological aspects of medicine, and this is certain to continue An important impetus in this direction has been given by the revision of the regulations for the University of London diploma in psychological medicine In the scope of its diploma are now included mental retardation and delinquency, and also the psychoneuroses Systematic attempts to provide instruction in these fields are being made by at least three bodies There are courses held at the Maudsley Hospital Courses in mental deficiency are held once or twice yearly organized by the Central Association for Mental Welfare in conjunction with the University of London and with the London School of Hygiene and Tropical Medicine The Tavistock Clinic (formerly the Institute of Medical Psychology) holds from time to time short courses of lectures for the general practitioner, and has both short and long systematized courses The long course in psychotherapeutic theory and method now covers two years work, and is open to a limited number of practitioners only They are expected to give a minimum of twelve hours (on three days) in the week The first year's work is intended to cover the ground for those desirous of practising psychotherapy, while the full course is meant for those intending to specialize in the subject The clinic now has admirable premises at Malet Place, W.C., and such teaching as that indicated has been effectively developed there and has become very extensive and important The course covers the requirements for the appropriate parts of the university diploma

Instruction in all branches of preventive and of tropical medicine is now available at the London School of Hygiene and Tropical Medicine, at the corner of Keppel Street and Gower Street This institution was opened in 1929, and has established itself as a most valuable school of the University of London in the faculties of medicine and science Here are university chairs in public health, bacteriology, biochemistry, epidemiology, helminthology, medical protozoology, medical entomology, and medical industrial psychology

The principal courses of study are for the university diplomas in public health, in bacteriology, in industrial psychology, and for the Diploma in Tropical Medicine and Hygiene of the English Conjoint Board Special courses of instruction are also arranged in other subjects The course of study for the diploma in public health comprises full preparation for both parts of the diploma examination and includes instruction in infectious disease and hospital management, and two important studies which have recently been established—namely, physiology as applied to hygiene and industry, and medical industrial psychology It should be noted that new rules relating to this diploma have been made by the General Medical Council and come into force on October 1, 1938 In consequence of these alterations and as the result of experience the course of instruction in public health has been remodelled, and it now includes special lectures and practical work in regard to mental deficiency The course of study for the diploma in tropical medicine and hygiene is also taken in two parts Clinical demonstrations are afforded at the Hospital for Tropical Diseases, close by, and at other centres With the incorporation in this school of the Ross Institute the studies in tropical hygiene received a new impetus and direction, and the London School of Tropical Medicine may now be said to represent the confluence of three movements that of the scheme for a central school of hygiene recommended by the Athlone Committee in 1921, that of Sir Patrick Manson and the Seamen's Hospital Society from 1899, and that of Sir Ronald Ross and his Institute at Putney

In the provinces the Universities of Oxford, Cambridge, Birmingham, Bristol, Liverpool, Manchester, Sheffield, and Durham (at the College of Medicine, Newcastle on Tyne) have organized courses of postgraduate work and instruction Liverpool University has established a regular course for ship surgeons on similar lines to that already mentioned in London Edinburgh receives graduates from many schools in the Dominions as well as in this country In Glasgow and in Aberdeen courses are available, and, in relation with the University of St Andrews, courses are given by the James Mackenzie Institute for Clinical Research At many of these centres the teaching is provided by whole-time intensive courses, by part time courses, and by means of clinical assistantships The Joint Tuberculosis Council has provided nomadic courses in its own special subject, and several Divisions of the British Medical Association are now organizing post graduate courses in their own locality

British Postgraduate Medical School

The British Postgraduate Medical School was incorporated by Royal Charter on July 10, 1931 It was opened by H.M. King George V, accompanied by H.M. the Queen on May 13, 1935, in the presence of a distinguished gathering It has been recognized as a school of the

University of London and is managed by a governing body, under the chairmanship of Sir John Caulcutt The governing body is made up of representatives from the various departments of State interested in medical education, together with representatives of the Royal Colleges the Society of Apothecaries the University of London the London County Council and certain co opted members

The School is associated with Hammersmith Hospital, one of the London County Council general hospitals This is a modern hospital which has been enlarged to meet the requirements of the School The original accommodation was 388 beds, and it has been extended to 534 beds by the erection of an entirely new ward block Two additional operation theatres of the latest design have been constructed and in addition the old operation theatre, used by Sir Robert Jones during the war, has been brought up to date and is now in use as the gynaecological operation theatre A suite of new wards and accompanying labour rooms and nursery constitute the maternity department, and is in accordance with the latest requirements for the segregation of cases and the avoidance of infection

Each ward throughout the hospital has attached to it, in addition to the ordinary beds, single bedded side wards and a clinical laboratory There have been constructed in addition special laboratories for electrocardiographic and basal metabolism observations The kitchens have been reconstructed and a dietitian appointed A large new block has been constructed to house the out patient department on its ground floor, and a modern and up to date radiology department on the first and second floors This department provides for both diagnostic procedures and for deep therapy It is in all respects of the very latest design and equipment

The School itself is housed in a block mainly devoted to administration and pathology The medical and surgical and gynaecological departments are housed in a separate block providing clinical laboratories and rooms for senior members of the staff The existing school block includes two lecture theatres for the use of the School These lecture theatres are provided with an episcope capable of projecting large pathological specimens a microprojector of a new and improved design, and a cinematograph The lecture theatres seat up to 100 students and have attached to them a suite of rooms for the use of the lecturer and accommodation of cases There is a reference library, which is noteworthy for the large number of periodicals available for reference These include all the important English periodicals and a selection of the more important journals published in Europe, America and the Dominions

The pathology department has all its laboratories in the School building On the ground floor are provided laboratories for morbid histology and for biochemistry On this floor is also situated the post mortem department On the first floor is accommodation for the professors and readers, museum library, and the laboratories devoted to clinical pathology The top floor is entirely occupied by the bacteriological department and the accommodation for experimental pathology The equipment throughout these laboratories is entirely new and of modern design

The staff of the School is organized in three divisions First is the permanent whole time staff The second is the consultant staff having regular visiting days and available for emergency calls This consulting staff is mainly occupied in the treatment of patients and only takes a secondary part in tuition It has been necessitated by the fact that the School has no special departments, it being the intention of the governing body that the special hospitals already existing in London should be utilized for postgraduate students who require such instruction The third division of the staff is the visiting staff who conduct special courses in different groups of disease and take part in the general teaching of the School It is hoped to include in this staff the leading teachers and authorities available in London and the provinces, and as opportunity offers from other parts of the world

The permanent whole time staff is divided into four departments—medicine surgery, obstetrics and gynaecology, and pathology Each department is under the guidance of a director, who is a professor appointed by the University of London He is assisted by a reader or readers also appointed by the University and a varying number of assistants appointed by the governing body In addition each department has a resident staff

The School provides refresher courses of an intensive character for general practitioners under the N H I scheme These courses last for a fortnight and thirty such courses will probably be held during the next year

The most important part of the tuition is, however the instruction provided for medical graduates from all parts of the world who desire to extend their knowledge in medicine surgery or midwifery and for students of pathology who desire to do advanced work In this respect the School is attempting to provide something entirely different from the work usually associated up to date with postgraduate schools previous postgraduate instruction has consisted almost entirely of courses and lectures covering a set syllabus Although this will form part of the instruction provided at the School the real postgraduate instruction at Hammersmith consists in providing the students with a large amount of clinical material and encouraging them to work at it, under the tuition of well qualified instructors All the assistants of the School have special experience in some department of their subject, and if the student is particularly interested in that department he is attached to that particular assistant He is allotted cases and a definite amount of time is set apart which he can devote to the examination of these cases He receives every assistance and such tuition as meets his personal requirements The classes are broken up into small groups with this object and the work from the outset is almost entirely clinical

From time to time definite clinical lectures carefully prepared, are given either in the School theatres or in the clinical theatres The students attend regular pathological conferences and radiological conferences, and conferences and discussions between the different departments The department of pathology takes part in the clinical work of the School, and provides regular demonstrations to the students on laboratory procedures In this way it is hoped that the students of the School will acquire a more scientific and expert approach to the problems of clinical medicine and surgery and by attendance at the various conferences will be brought in touch with the latest advances and benefit by hearing the critical discussions on the diagnosis and treatment

The students also attend the out patient departments which are purely consultative in character In the out-patient department of obstetrics special attention is being devoted to ante natal and post natal work, and the prevention of maternal mortality

The department of pathology provides instruction for students in advanced pathology in any of the three departments It also provides accommodation for research work in pathology and for students desiring to work for the Ph D In addition to the weekly demonstrations on laboratory procedures lectures on The Place of the Laboratory in Clinical Medicine are provided at regular intervals A course for the Diploma in Clinical Pathology will commence on October 1

The radiology department provides clinical instruction for students taking a diploma in radiology and post-graduates who desire further instruction in radiology can be accommodated in limited numbers

The fees for the ordinary hospital practice including tuition are 6 guineas for one month and 3 guineas for each subsequent month The fee for the fortnight refresher courses is 5 guineas

The British Postgraduate Medical School is situated in Ducane Road Shepherd's Bush W 12 and can be reached by rail to Wood Lane station (Central London Railway) or by No 7 bus to Acton Vale Information as to fees for other courses of study and further details can be obtained from the Dean

Fellowship of Medicine and Postgraduate Medical Association

The Fellowship of Medicine arranges regular courses in general medicine and surgery, including special departments, each lasting from one to four weeks Courses in diseases of children, diseases of the chest, heart, nervous system, dermatology, gynaecology and obstetrics, plastic surgery, proctology, psychological medicine, physical therapy, rheumatism, urology, and practical anaesthetic tuition are given from time to time at the special hospitals in association with the Fellowship of Medicine Evening clinical and pathological courses for the M R C P (four times a year) and F R C S (Primary and Final) (twice a year) are arranged also Week end and evening courses are arranged in many subjects A panel of teachers is always available for clinical teaching, by arrangement with the Fellowship Lectures and demonstrations are arranged periodically The office of the Fellowship is, by kind permission of the Royal Society of Medicine, at No 1, Wimpole Street, W 1 (telephone Langham 4266) The secretary is in attendance daily from 10 a m to 5 30 p m (Saturday 10 a m to 12 30 p m) The annual subscription for membership of the Fellowship of Medicine and Postgraduate Medical Association is £1 1s, which includes the *Postgraduate Medical Journal* published monthly Courses, lectures, and demonstrations are open only to members

Radium Institute and Mount Vernon Hospital

The working scheme between the London Radium Institute in Riding House Street and the Mount Vernon Hospital at Northwood for the establishment of a Postgraduate School of Radiotherapy continues in operation The union of these two bodies is now complete, though for the time being the work of both will go on as hitherto, the resources of one body supplementing those of the other The Dean will be pleased to see prospective students by appointment Applications for information may be addressed to the Secretary of the Radium Institute and Mount Vernon Hospital (Mr T A Garner) at the School, Riding House Street, London, W 1

North-East London Postgraduate College

The headquarters of this postgraduate school are situated at the Prince of Wales's General Hospital, Tottenham, N 15, in the midst of this densely populated North London district It contains 238 beds, and is within a few minutes' walk of South Tottenham Station on the London, Midland and Scottish Railway, and Seven Sisters and Tottenham Hale Stations on the London and North-Eastern Railway It is readily accessible by electric tram from Manor House and Hackney, and from Dalston, Edmonton, and other parts of North London The North Middlesex Hospital, Edmonton, N 18, with upwards of 1,000 beds, has, under a recent arrangement, taken part in the clinical teaching

The college is in association with the Fellowship of Medicine and Postgraduate Medical Association, and is recognized by the Admiralty and India Office for the purpose of study leave, and by the University of London as a place for advanced study for the M D and M S degrees the course of practical teaching of bacteriology is approved by the University of Cambridge for its D P H, and there are ample arrangements for the convenience of men who are thus working or who, being in active practice are desirous of getting themselves into touch with modern methods The hospital affords excellent facilities for medical practitioners who wish to take part for a time in general hospital work or to obtain special instruction in the several branches of medicine and surgery Throughout the sessions into which the year's work is divided clinics lectures, and demonstrations are given Operations are performed every afternoon except Saturday Special vacation or intensive courses are held at intervals The winter session opens about the middle of September for clinical teaching

Fees—For the hospital practice in general medicine or surgery the fee is 5 guineas for three months or 2 guineas for one month Provided there is accommodation in the special departments the fees are eye department 3 guineas, gynaecological department 5 guineas ear, nose and throat department 5 guineas for three months All departments—the fee is 3 guineas for one month 6 guineas for three months 10 guineas for a year and 15 guineas for a perpetual ticket Courses in practical anaesthetics are not included in the above and a fee of £4 4s per month is charged for this work For special tuition in any subject the fees are arranged with the member of the staff concerned in consultation with the Dean

Additional information can be obtained from the Dean of the Postgraduate College, at the Prince of Wales's Hospital.

West End Hospital for Nervous Diseases

The annual out-patient attendance is between 38,000 and 40,000 at the out-patient department, Welbeck Street W 1 The in-patient department, Outer Circle, Gloucester Gate, Regent's Park, provides 76 beds, including 25 cots for children, and is fully equipped with pathological x-ray, and other special departments

The clinical and teaching facilities of the hospital fulfil the requirements of the examining bodies for the Diploma in Psychological Medicine, and for the London M D Part III Attendance on the general practice of the hospital is open to postgraduates There are opportunities for personal examination of cases In addition systematic courses of instruction in neurology and in related subjects are held throughout the year Special courses are given for the D P M and for the M R C P Tuition for senior undergraduates is also arranged

The courses of instruction in neurology consist of out patient demonstrations ward rounds in the in patient department, and lecture demonstrations by the physicians and surgeons, clinical demonstrations of psychological cases are given by members of the psychiatric department and the child guidance unit, also pathological discussions There are also some demonstrations on the neurological aspects of such related subjects as radiology ophthalmology, orthopaedics physical medicine, and oto rhino-laryngology A department of clinical research has been founded, and any qualified person desirous of working in this department should apply to the director The Savill Memorial Prize (value £15 and medal) is offered biennially for competition amongst postgraduate students of the hospital Honorary clinical assistantships are available in the out patient department and application for these should be made to the House Governor to whom application should also be made for particulars of the courses of instruction

Manchester Postgraduate Facilities

Courses in preparation for the diplomas in psychological medicine, in public health, and bacteriology are arranged There are facilities also for obtaining a certificate in venereal diseases A limited number of clinical assistantships at the discretion of the hospitals are offered in the medical, surgical, and special departments of the Manchester Royal Infirmary, the Ancoats Hospital, and certain special hospitals for one, two, or three months, or longer A clinical assistantship at the Radium Institute for three months is offered Clinical teaching for postgraduates is given each Thursday during university terms by the honorary staff of Ancoats Hospital, no fee charged

Postgraduate Courses at Bristol

The University of Bristol provides courses of postgraduate study for practitioners Details of set courses at the Royal Infirmary and General Hospital are announced locally In addition, practitioners may become clinical assistants in medicine, surgery, or special subjects for periods of a month or more

Daily Postgraduate Study.—For those who are able to devote several hours each day to hospital practice the university offers special facilities for postgraduate work. Qualified medical practitioners may be appointed as clinical assistants for a period of one or more months. They may act as assistants if times permit in more than one department and in any of the hospitals during their period of study. They will be entitled to the use of the clinical laboratories and medical library and have the right to attend in all departments including operations postgraduate and ordinary clinical demonstrations and post mortem examinations.

All inquiries and applications for admission should be addressed to the Director of Postgraduate Studies (Clinical Section) Department of Medicine University of Bristol.

Postgraduate Courses at Newcastle

The following postgraduate courses can be taken at the Medical School, King's College, Newcastle upon Tyne, formerly the University of Durham College of Medicine (University of Durham).

1. General courses in clinical medicine surgery and pathology at the Royal Victoria Infirmary meeting once weekly for ten weeks. One course will be held from October to December and one from April to June.

2. Special courses of clinical instruction meeting once weekly for ten weeks in the following subjects: gynaecology diseases of the eye diseases of the throat nose and ear diseases of the skin venereal diseases neurology. Special courses in midwifery will be held at the Princess Mary Maternity Hospital.

3. An intensive course of fourteen days' duration in the summer vacation.

4. In addition to the regular postgraduate courses practitioners may attend the ordinary medical and surgical practice of the Royal Victoria Infirmary and also at the Princess Mary Maternity Hospital for specified periods.

5. Classes are held at the Newcastle General Hospital for clinical instruction in medicine and surgery or lecture demonstrations every Sunday morning during term. There is no fee and all medical practitioners are invited to attend.

6. General and special courses in dental surgery are provided in the Dental Department.

7. Courses for panel practitioners are also held by special arrangement with the Ministry of Health and other bodies.

Postgraduate Study in Cardiff

Certain courses of postgraduate study are given during the year, and facilities may be offered to graduates in medicine and other duly qualified persons to carry out research work in the different departments of the Medical School. Research Scholarships are available ranging in value from £150 to £250 per annum. Further information regarding these is given under the heading Research Scholarships in the article on the University of Wales (p. 499).

Edinburgh Postgraduate Courses

In connexion with the University and Royal Colleges postgraduate courses are arranged every year, from about the middle of July to about the middle of September, comprising (*a*) a course in obstetrics and gynaecology, held from July 11 to July 29, (*b*) a general practitioner course, (*c*) a general surgical course. Courses (*b*) and (*c*) extend for four weeks from August 15 to September 10. Similar courses are arranged each year.

The course in obstetrics and gynaecology includes instruction in clinical midwifery and clinical gynaecology, obstetrical and gynaecological anatomy physiology and pathology antenatal and post natal clinics and the care of the newborn infant etc.

The general practitioners' course includes lecture demonstrations and where possible, practical instruction on medical anatomy medical sideroom work examination of the blood *x* ray and electrical therapy morbid anatomy and post mortem examination clinical instruction in medicine, surgery gynaecology child life and health diseases of the skin and infectious diseases, instruction in the diseases and methods of examination of the nervous circulatory, respiratory alimentary and renal systems and in diseases of the ductless glands.

The general surgical course includes lecture demonstrations on surgical anatomy surgical pathology and surgical *x* ray diagnosis clinical instruction in surgery at the Royal Infirmary and Royal Hospital for Sick Children clinical instruction in venereal diseases surgical out patients surgical and gynaecological operations and special instruction in abdominal genito urinary and other branches of surgery.

A course on internal medicine to be given from October 17 to December 10 has also been arranged. There will be four hours co ordinated teaching daily throughout the course. Diseases of the various systems will be dealt with during successive weeks—for example the first week will be devoted to cardiology 10 a.m. methods of diagnosis 11 a.m. clinics on cardiac cases 12 noon ward work 2 p.m. correlated demonstrations on clinical pathology radiology etc. 4 p.m. physiology of the circulation 7 p.m. ward work. The graduates will be apportioned for ward work to the eight physicians on the staff of the Royal Infirmary. The attendance will be limited to thirty two.

A series of clinical discussions open to all graduates is arranged on subjects of general interest. Among the special courses also arranged at various times of the year are: examination of the blood diseases of the ear nose and throat ophthalmoscopy venereal diseases *x* ray physics and electrotechnics tuberculosis ultra violet radiations and their uses the interpretation and significance of modern diagnostic methods surgical pathology clinical surgery (including radiology) clinical medicine (including radiology and child life and health) neurological surgery treatment of fractures neurological surgery orthopaedic surgery endocrinology diseases of the nervous system modern methods of anaesthesia.

Particulars regarding the courses dates of commencing fees etc. may be had on application to the Honorary Secretary Postgraduate Courses in Medicine University New Buildings Edinburgh.

Postgraduate Medical Teaching in Glasgow

Organized postgraduate medical teaching is available in Glasgow under the auspices of the Postgraduate Medical Association. This association represents practically all the teaching institutions in Glasgow and its business is managed by a board elected periodically. The chairman of the board is Professor Archibald Young.

During the winter months there is a series of weekly demonstrations and lectures specially designed for local practitioners. During the spring and summer months whole time medical and surgical courses for general practitioners are conducted. The forenoons are occupied with general medicine and surgical diagnosis and minor surgery in the Royal the Western and the Victoria Infirmaries. In the afternoon special subjects are dealt with in the special hospitals and in the special departments of the general hospitals two subjects being considered each afternoon.

Special courses are held from time to time and arrangements have been made whereby a limited number of graduates may become attached to wards or out patient departments nominally as clinical assistants for definite periods throughout the year. Clinical assistants work under the direct supervision of the physician or surgeon in charge and carry out such detailed investigations as directed.

Further information may be had on application to Dr James Carslaw Secretary Postgraduate Medical Association, 9 Woodside Terrace Glasgow C.3.

Tropical Medicine

There are large and important Schools of Tropical Medicine in London and Liverpool, and the Colonial Office expects all nominees for the Colonial Medical Service to pass through one or other of the two schools mentioned before their appointments are confirmed and commercial firms engaged in tropical enterprise commonly demand from medical applicants for employment corresponding evidence of special knowledge. Information with regard to these schools and diplomas and degrees is given in the paragraphs printed below. The University of London alone gives a degree (M.D.) in Tropical Medicine, and this, being an internal degree can only be taken by

students who are medical graduates of that university Diplomas in Tropical Medicine or Hygiene are granted by the universities of Edinburgh and Liverpool, and by the Conjoint Board of the Royal College of Physicians of London and the Royal College of Surgeons of England

Diplomas and Degrees

LONDON UNIVERSITY.—Tropical medicine is one of the six branches in which the M D degree may be obtained Candidates must normally have taken the M B B S degrees not less than two years previously and must subsequently have attended a course of one academic year in tropical medicine at an approved school, or must have practised for two years in a region where tropical diseases prevail In exceptional circumstances candidates may enter for the M D examination one year after taking the M B, B S degrees

THE CONJOINT BOARD IN ENGLAND.—This body grants a diploma in tropical medicine and hygiene to candidates after an examination held in the months of January April, and July The hospitals and laboratories recognized for this diploma are the London School of Hygiene and Tropical Medicine the Royal Army Medical College, the Liverpool School of Tropical Medicine the School of Tropical Medicine Calcutta, and the Usher Institute Edinburgh Particulars and conditions of admission to these examinations fees, etc may be obtained from the Secretary Examination Hall, Queen Square, London W C 1

UNIVERSITY OF LIVERPOOL.—A diploma in tropical medicine is given by this university to candidates possessing a recognized medical qualification who have attended the courses provided by the Liverpool School of Tropical Medicine and who have passed the examination held thrice yearly by the university examiners The subjects of examination are (*a*) tropical medicine, including aetiology symptoms, diagnosis, and treatment of tropical diseases, (*b*) pathology and bacteriology, (*c*) parasitology and entomology Fee for the course £21 A diploma in tropical hygiene (D T H), open to the holders of the D T M has also been established The examination is held twice yearly by the university examiners The subjects of examination are tropical hygiene (including sanitary engineering vital statistics and epidemiology and applied parasitology and entomology) practical sanitation bacteriology, chemistry (including meteorology and climatology) Fee for the course £12 16s Further information can be obtained from the Dean of the Faculty of Medicine, University of Liverpool

UNIVERSITY OF EDINBURGH.—Candidates for the diploma in tropical medicine and hygiene granted by the University of Edinburgh must be graduates in medicine and surgery of that university, or hold corresponding degrees or qualifications registrable with the General Medical Council of Great Britain or of such other universities or medical schools as may be recognized for the purpose by the University Court The course of instruction which commences in October, extends over two terms The examinations (Part I and Part II) are written, oral, and practical and are held at the end of the courses Candidates on the first occasion of presenting themselves for examination in either part, are required to appear for all the subjects of that part Those who fail to pass the entire examination in either part within a period of twelve months after the first appearance are required to reappear for all the subjects The university is included in the list of institutions whose courses of instruction in tropical medicine may be taken by officers on appointment to the Colonial Medical Services or during study leave Full particulars can be obtained from the Dean of the Faculty of Medicine, Edinburgh

SCHOOLS

London School of Hygiene and Tropical Medicine (University of London)

(INCORPORATING THE ROSS INSTITUTE)

The courses of study in all branches of the work of the School will recommence in the autumn in the premises in Keppel Street (Gower Street), the gift of the Rockefeller Foundation which have excellent laboratories and research rooms a fine lecture theatre and classrooms, library, and museum

The course of instruction for the diploma of the Conjoint Board in tropical medicine and hygiene is divided into two parts Part I (three months) and Part II (two months) The examinations by the Conjoint Board will follow closely upon the end of the corresponding course of study This course is recognized by the University of London as a course for associate students

The dates of the courses for the session 1938-9 are Part I.—September 27 to December 16 1938, January 3 to March 24, 1939, April 3 to June 23 1939 Part II.—January 16 to March 17, 1939, April 17 to June 16 1939

The course of instruction under Part I includes clinical demonstrations applied pathology and medical zoology Part II comprises instruction in tropical hygiene, including in relation to hygiene, bacteriology and vital and medical statistics and additional clinical demonstrations

Various short courses of instruction are also provided and special arrangements are made in the case of students who are unable to attend at the beginning of a course

The instruction in the division of clinical tropical medicine is given by the medical staff of the Hospital for Tropical Diseases and by visiting lecturers

A whole time course of study for the diploma in public health begins on September 26, and will extend over a period of nine months It is arranged in compliance with the requirements of the General Medical Council, and students taking the course will be able to proceed to the academic diploma in public health of London University The curriculum has been planned on very practical lines and includes, in addition to work with medical officers of health in two selected areas, a large number of visits to places of public health interest A series of special lectures given by eminent authorities, is open to members of the medical profession as well as to students of the school The London County Council the City of London and various other bodies have placed their resources at the disposal of the school for teaching purposes

Full time attendance is essential for Part I of the D P H course (September-December), but candidates selected for certain appointments in the London County Council's special hospitals will be admitted to Part II of the course as part time students

The course of study for the University of London diploma in bacteriology covers a period of one academic year beginning in October Special three monthly courses will be given in epidemiology and vital statistics Courses are arranged in psychology and physiology applied to industry

Inquiries with regard to all the above mentioned courses should be addressed to the Secretary, London School of Hygiene and Tropical Medicine, Keppel Street, Gower Street, London, W C 1

University of Edinburgh

A course of instruction for the diploma comprising a primary and a secondary course, is given during the autumn and spring terms (October to March) and includes tropical hygiene bacteriology entomology, and parasitology diseases of tropical climates (systematic and clinical) tuberculosis and venereal diseases The university is included in the list of institutions whose courses of instruction in tropical medicine may be taken by officers on appointment to the Colonial Medical Services or during study leave Full particulars can be obtained from the Dean of the Faculty of Medicine

Liverpool School of Tropical Medicine

This school is affiliated with the University of Liverpool The university grants diplomas in tropical medicine (D T M) and in tropical hygiene (D T H)

Two full courses of instruction, each lasting about eleven weeks are given every year for the D T M, commencing respectively September 29 1938, and January 5, 1939, and two courses for the D T H, beginning on January 10 and April 20 1939 The D T H can only be taken by those who have obtained the D T M Students who do not desire to take the diploma examinations held by the university at the end of each term are given a certificate if attendance has been satisfactory

Fees.—(1) For the D T M course, 20 guineas for the D T H course 10 guineas (2) For the diploma examinations 5 guineas An extra charge of one guinea is made for the use of a microscope if required

The laboratories of the school adjoin the university and the tropical ward of the Royal Infirmary The dimensions of the building are 162 feet in maximum length by 84 feet

in width In addition to the basement in which are accommodated the photographic department and large storage rooms there are four floors The ground floor has (1) lecture theatre with accommodation for about seventy students (2) library (3) a spacious museum with preparation room adjoining The first floor has twelve rooms in which are housed the departments of tropical medicine tropical hygiene and entomology The second floor has the main class laboratory 69 feet by 58 feet excellently lighted and three other rooms devoted to the department of parasitology The third floor has a large research laboratory and two research rooms. On the roof is an insectarium a mosquito proof house and other accommodation

Since its foundation the school has dispatched to the Tropics thirty two scientific expeditions many of the workers having been taken from among its students The work done by the staff has been published in twenty four special memoirs in the *Annals of Tropical Medicine and Parasitology* issued by the school and in numerous articles in the scientific press

The school also has a laboratory in the Tropics the Sir Alfred Lewis Jones Tropical Laboratory in Sierra Leone which was opened on January 10 1922 and is staffed by the school. Further information may be obtained from the Laboratory Secretary School of Tropical Medicine Pembroke Place, Liverpool 3

Psychological Medicine

Medical men recently qualified or whose experience with mental cases has been slight are not infrequently at a loss when confronted with mental illness They feel most assured when such illness is clearly the outcome of some definite bodily derangement either as its accompaniment or its sequel for they realize that its successful treatment will depend upon the recognition of the underlying malady In this connexion one calls to mind the great diversity of delirious states short or prolonged induced by cerebral contusion, by bacterial invasion by poisons from without or toxins from within the system, the neurological complications of syphilitic infections—for example meningovascular syphilis and syphilitic encephalitis generally known as general paralysis of the insane the sequelae of encephalitis lethargica the psychological concomitants of Graves's disease myxoedema pernicious anaemia the symptomatic epilepsies cardiovascular disease and many more In such cases no therapy directed towards the superficial symptoms alone can ultimately prove of avail it must be radical, attacking the seat of the disease

Mental illnesses of this nature do not bulk largely in the statistics of mental hospitals whose numbers are of course swollen by the preponderance of those afflicted with chronic maladies, such as dementia praecox, the paraphrenias, and recurrent manic depressive episodes These psychoses may well be of organic derivation, but their treatment by interference with organic processes (for example, hypoglycaemic shock), though occasionally successful does not rest upon any sure scientific foundation Hence, in the main treatment is along social lines, consisting as it does of measures to prevent deterioration to re establish contact' with life by promoting suitable interests and correcting maladjustments Eventually it may be hoped, scientific therapy will replace social therapy in these disorders

Often enough mental illness is no inevitable accompaniment or aftermath of bodily disease even though such exists but may arise accidentally as it were as a by-product, produced by psychological repercussions, the stirring up of fears and anxieties disappointments and animosities with which the illness has become inextricably interwoven Such cases abound in practice as hypochondrias and hysterical and other psychoneurotic states Their understanding is only to be attained by the discovery of the obscure satisfaction their illness affords such patients and as in the pure psychoneuroses, knowledge of the psychological structure of the reaction is a *sine qua non* of a scientific therapy Constitutional tendencies doubtless provide the soil for the production of both psychoses and psychoneuroses and may be of such a kind as to be clearly recognizable as congenital mental defectiveness A knowledge of psychological medicine to be requisite must embrace an understanding of the mental maladaptations met with in these three great groups A practical acquaintance with all of them will prevent many diagnostic and therapeutic errors

All too often a patient meets with some calamity, with all its attendant distasteful publicity which a knowledge of the practical aspects of mental disease might well have obviated The treatment of psychotics is the province of the psychiatrist but their early recognition is of supreme importance and a working knowledge of such states will afford to the practitioner the means of their detection at a stage when curative measures are most likely to meet with success Sufferers from one or other of the functional nervous disorders are innumerable, and too many of them pass from doctor to doctor unassuaged The intervention of the specialist may be necessary in the treatment of the severer forms of hysteria and neurosis but many practitioners have now acquired a sufficient knowledge of such states to be able to carry out a thorough and effective system of treatment themselves

Mental deficiency cannot escape detection in its extremer forms but numerous higher grade defectives many of whom are a menace to the community by reason of their criminal propensities escape recognition and especially must the student who proposes to take up a career in the school medical service or in the prison service make sure that he is thoroughly grounded in this subject

It is generally assumed that the mental expert is equally well acquainted with each of these departments of psychological medicine—the psychoses the psychoneuroses and mental deficiency This however is seldom the case In the past there has been too rigid a specialization largely the outcome of administrative requirements Recently, owing to the establishment of mental out patient clinics and the coming into force of the Mental Treatment Act which gave sanction to the admission of voluntary patients into public mental hospitals the psychiatrist's experience has been considerably enlarged and his province has been still further widened where the authorities have elected to place the selfsame physician in charge of both the psychiatric and the mental deficiency units It is to be hoped that this process of co ordination will continue and that it will eventually embrace the systematic psychological examination of prisoners or better still of accused persons awaiting trial

However that may be the medical student intending to devote himself to psychiatry will be well advised to neglect no opportunity of furthering his acquaintance with every branch of psychological medicine

Mental Hospital Appointments

Those who take up psychiatry as a career work as medical officers of public or private mental hospitals or similar institutions Except in the larger institutions, such as those under the control of the London County Council where a number of the medical officers are allowed to live out if married the medical staff are resident officers having board lodging etc either in the hospital itself or a residence in the grounds Junior assistant medical officers receive about £300 to £450 per annum and senior assistant medical officers about £500 to £700 in both cases with board lodging laundry etc, in addition if married the board etc is commuted for cash As the mental hospitals are under local control the salaries vary much in different mental hospitals Medical superintendents whose pay commonly ranges between £800 and £1 500 per annum, are provided with a house in the grounds of the hospital, and draw various allowances

Since the passing of the Asylums Officers Superannuation Act of 1909, doctors on the established staff of a public (county or borough) mental hospital, by paying 1s contributions 3 per cent of the value of their appointments, may retire at the age of 55 (provided that they have completed twenty years service) on a pension computed at the rate of one-fiftieth of their salary and emoluments for each completed year of service but inasmuch as the benefits of this Act are restricted to the public mental hospitals and are foregone on transfer to private or chartered mental hospitals, and the provision for widows is inadequate and uncertain, less inducement is offered than might be to joining the service

Appointments to the public mental hospitals are made by the visiting committees Promotion tends to be slow and uncertain The higher positions are not always advertised but in recent years there has been a general improvement in the conditions of service

Mental hospitals are fast developing an atmosphere approximating more closely to that of the general hospitals Whilst routine, administrative and clerical, necessarily bulks largely in mental hospital duties, there is ample material, time and scope for purely medical work and research and there is no branch of medicine in which research is more needed

Instruction in Mental Disorder

Though at the present time the instruction given to the student is scarcely adequate to supply the knowledge of mental disorder requisite for the needs of the general practitioner, the facilities for the study of psychological medicine in the general hospitals are now much greater than in former years Thus many of the teaching hospitals have out-patient departments for the treatment of mental cases, and in some of these hospitals special lectures are given in psychopathology These facilities need not be utilized by the student, however, and the compulsory part of the unreformed curriculum is generally confined to formal lectures and a few attendances at some mental hospital Here the student is apt to see mainly the advanced states of mental disease, and is likely to gain the impression that mental disorder is necessarily related to segregation and custody We would therefore impress upon him the importance of attending the out-patient department for mental disorders, where he will be able to observe the mild and early cases such as he will hereafter meet with in general practice

At Guy's and at the Middlesex Hospital a small number of beds are allocated for the treatment of patients suffering from mental disorder, and we learn that in St George's Hospital when rebuilt, some fifty beds will be provided for cases which will include psychotic patients as well as those who suffer from psychoneurotic ailments This is a bold and enlightened policy, and one which will certainly prove of inestimable benefit, for quite apart from therapeutic advantages it will enable the student to gain true insight into the relation between mental disorder and medicine as a whole and he will realize that it is a form of illness to be studied with other diseases and to be treated along similar lines

In London postgraduate courses of instruction of a comprehensive kind are given at the Maudsley Hospital Denmark Hill, and at the National Hospital, Queen Square, courses are arranged to meet the requirements for the diploma in psychological medicine in regard to nervous diseases Besides its ordinary postgraduate teaching in neurology the West End Hospital for Diseases of the Nervous System holds courses on common disturbances of the nervous system, and provides instruction in neurology for the D P M Courses in mental deficiency are arranged by the University of London There are also postgraduate courses at the various universities which grant diplomas of psychological medicine or of psychiatry

There are various facilities for instruction in psychotherapy and for the study of the psychoneuroses The Institute of Medical Psychology in London has systematic courses of instruction dealing especially with the minor forms of mental disorder which are not usually met with in the mental hospitals At the London Child Guidance Clinic fellowships are open to medical graduates who hold a diploma in psychological medicine An opportunity of acquiring clinical knowledge of all varieties of mental disorder is afforded at Hill End Hospital and Clinic St Albans where two house physicians are appointed for a period of six months at £165 per annum and if desired for a further six months at £200 per annum The Tavistock Clinic annual course may be attended at the same time

Diplomas

Those who are taking up psychiatry as a career will find it essential to obtain a diploma in psychological medicine Such a diploma is not at present compulsory for a permanent position on the staff of all mental hospitals but it will probably become so in course of time, just as it is now essential to obtain the D P H if a career in public health is contemplated Psychiatry is one of the branches of medicine which candidates for the M D Degree of the Universities of London and Edinburgh can take up and in addition, diplomas in psychological medicine (D P M), to which reference has been made, can be obtained from the Universities of London, Edinburgh Durham, Leeds, Manchester, Dublin, and the National University of Ireland, and from the Conjoint Board in England The requirements for a diploma differ to some extent in the various universities and colleges

UNIVERSITY OF LONDON (D P M)

The diploma awarded by the University of London certifies that the candidate has passed the examination in psychological medicine with special knowledge of one or other of the two branches, either psychiatry or mental deficiency special provision being made for this in Part B of the examination The examination consists of two parts, A and B Part A must be passed before Part B is taken It is held twice in each year—Part A in March and October and Part B in April and November Part A consists of anatomy, histology, and physiology of the nervous system (one paper and a practical examination), and psychology (one paper and an oral examination) Part B consists of neurology (one paper and a clinical and an oral examination) and psychological medicine (two papers and a clinical and an oral examination Paper I tests the candidate's general knowledge of both mental diseases (psychiatry) and mental deficiency, and Paper II is a special one consisting of two separate alternative sections the first section relating to mental disease (psychiatry), and the second section to mental deficiency) A copy of the Regulations and of the Syllabus of Study will be sent on application to the University Extension Registrar University of London The Senate House, W C 1

CONJOINT BOARD IN ENGLAND (D P M, R C P AND S ENG)

Both parts of the examination are held in June and December The examination comprises the following subjects, with special regard to their relation to psychological and general medicine —Part I (*a*) anatomy (macroscopic and microscopic) and physiology of the nervous system, (*b*) psychology Part II (*a*) clinical neurology and neuropathology, (*b*) psychological medicine, including psychoneuroses and mental deficiency and their legal relationships The examination will be written and oral in Part I, and written oral, and clinical in Part II No special certificates of study are required for Part I, but before entering for Part II candidates must produce certificates of (*a*) having attended clinical instruction for at least two months at a recognized hospital for nervous diseases or in the department for nervous diseases of a recognized general hospital, (*b*) having held a resident or whole time appointment at an institution for mental diseases where clinical instruction is given, recognized for the purpose, for a period of six months, or having attended clinical instruction in psychological medicine at a recognized institution during twelve months Further particulars may be obtained from the Secretary, Examination Hall, 8-11, Queen Square, London W C 1

UNIVERSITY OF EDINBURGH (DIPL PSYCH)

Candidates for the diploma must have held subsequent to graduation (*a*) a resident appointment for one year in a hospital for mental disorders approved by the Faculty of (*b*) a six months' appointment as above, and six months practical study of nervous diseases in a special or general hospital approved by the Faculty The examination co

prises —Part I (1) anatomy of the nervous system (2) physiology of the nervous system (3) psychology Part II (1) neuropathology (2) psychiatry and clinical psychiatry (3) clinical neurology Further particulars may be obtained from the Dean of the Faculty of Medicine the University of Edinburgh

UNIVERSITY OF LEEDS (D P M)

The examination is in three parts and is written oral and practical Subjects of examination —Part I (1) the development anatomy and histology (human and comparative) of the nervous system (2) the physiology of the nervous system and of the organs of special sense (3) general psychology Part II (4) the pathology of the nervous system Part III (5) clinical psychiatry (6) experimental and morbid psychology (7) (*a*) clinical neurology (*b*) mental hospital administration (*c*) medico legal aspects of insanity Candidates in order to pass must satisfy the examiners in the practical and clinical parts of the examination in Parts II and III respectively They may present themselves for the three parts of the examination separately or at the same time provided that no candidate shall be allowed to pass in Part II unless he has already passed in Part I or in Part III unless he has already passed in Parts I and II Evidence must be produced by candidates as to attendance of approved courses of instruction before they submit themselves to Part I of the examination Particulars may be obtained from the Academic Sub Dean School of Medicine Leeds

UNIVERSITY OF MANCHESTER (D P M)

The examination is in two parts Before presenting themselves for either part of the examination candidates must produce evidence of having attended subsequent to qualification, certain approved courses of instruction particulars of which may be found in the prospectus of postgraduate courses and must also have resided for at least six months in a Mental Hospital The course of study extends over a period of three university terms two of which must be taken in the university the remaining term may be taken at the university or at some approved institution The subjects of examination are — Part I (1) a written and practical examination on the development anatomy (human and comparative) and physiology of the nervous system (2) a written and practical examination in psychology (theoretical and experimental) Part II (1) a written and practical examination in pathology in relation to the nervous system (2) a written clinical and oral examination in psychological medicine (3) a clinical and oral examination in clinical neurology For further information application should be made to the Dean of the Medical School the University Manchester

UNIVERSITY OF DURHAM (D PSY)

The examination for the Diploma in Psychiatry consists of two parts Part I anatomy physiology pathology and bacteriology Part II psychology and experimental psychology neurology and psychiatry (systematic and clinical) and candidates may present themselves for the whole examination or for either part separately Particulars of the courses of instruction may be had on application to the Dean of Medicine the Medical School Kings College Queen Victoria Road, Newcastle upon Tyne

UNIVERSITY OF DUBLIN DIPLOMA

A postgraduate diploma in psychological medicine is granted to registered medical practitioners who have held a resident medical appointment at a recognized institution for the treatment of mental diseases for twelve months or who have held such an appointment for six months and have attended clinical instruction at an approved institution for six months and who have, in addition attended the requisite courses of instruction in anatomy physiology psychology pathology neurology and psychiatry and who have passed both parts of the examination for the diploma

The regulations for the diploma and particulars of the special courses of instruction may be obtained from the Registrar of the School of Physic Trinity College Dublin

NATIONAL UNIVERSITY OF IRELAND (D P M)

The National University of Ireland grants a diploma in psychological medicine Application should be made to the Registrars of the Constituent Colleges—University College Dublin University College Cork and University College, Galway—for all information as to courses etc

CONJOINT BOARD IN IRELAND (D P M)

There are two examinations in connexion with the diploma in psychological medicine Part I consists of (*a*) anatomy and physiology of the nervous system (*b*) psychology Part II (*a*) neurology including clinical and pathological neurology (*b*) psychiatry or psychological medicine including its legal relationships Fees £6 6s for each part.

Courses of Instruction

MAUDSLEY HOSPITAL LONDON

A course of instruction for the Diploma in Psychological Medicine is given annually at the Maudsley Hospital Denmark Hill from January to May inclusive the details of the last course being as follows The course consisted of two parts In the first part lectures on the anatomy of the nervous system were given by Professor Le Gros Clark with practical instruction by Dr Alfred Meyer A course of lectures on the physiology of the nervous system with demonstrations in physiological psychology was given by Professor F Golla a series of lectures on biochemistry in relation to the nervous system by Dr S A Mann on applied psychology by Dr H Yellowlees on theoretical and practical psychology by Dr J M Blackburn and on the practical application of intelligence tests by Dr C J C Earl For the second part of the course lectures on the general principles of psychiatry with a series of clinical demonstrations on the same subject were given by Professor Mapother on psychopathology and the principles of psychotherapy by Dr Bernard Hart on general treatment by Dr T Tennent on laboratory methods by Dr Mann and demonstrations on the pathology of the central nervous system by Dr Meyer Dr Tredgold lectured on mental deficiency Dr M Creak on mental abnormalities of children Dr East on crime and insanity and Sir Hubert Bond on the legal relationships of insanity Dr S Nevin gave instruction on clinical neurology at the Hospital for Nervous Diseases Maida Vale and Mr L H Savin on eye changes as applied to psychiatry Dr Eliot Slater gave a series of demonstrations on the psychoneuroses and affective disorders During the course a series of clinical demonstrations were arranged at the various London county mental hospitals and institutions for mental defectives The fee for the whole course (Part I and Part II) was 15 guineas or for either part separately 10 guineas for one single series of lectures in Part I the fee was 4 guineas and in Part II 2 guineas Inquiries as to lectures etc should be addressed to Protes or Golla Honorary Director of the Medical School Maudsley Hospital Denmark Hill S E 5 and as to clinical facilities to Professor Mapother the Medical Superintendent of the Hospital

BETHLEM ROYAL HOSPITAL

The Bethlem Hospital is situated at Monks Orchard Eden Park Beckenham Kent where every facility is available for the clinical study of nervous and mental disorder The classification of patients is a prominent feature in the administration of the hospital and treatment in all its modern and specialized aspects can be carried out at the Lord Wakefield of Hythe Treatment and Research Laboratories Two courses of lectures and practical instruction for the Diploma in Psychological Medicine are given each year in spring and autumn These are of an intensive character one commencing in September and completed in early December and the other commencing in the middle of January and completed in the middle of April Each course consists of two parts Part A includes lectures and demonstrations on the anatomy histology and physiology of the nervous system with lectures on psychology and demonstrations in experimental psychology Part B comprises lectures and clinical demonstrations in psychology including lectures and demonstrations in the morbid anatomy of the nervous system a series of lectures with clinical demonstrations on different branches of psychological medicine and lectures with clinical demonstrations on mental deficiency Entrants for the course who pay a composition fee of 15 guineas may if due notice is given attend either Part A or Part B of one course and postpone the other part until the next session An entrant who wishes to attend one part only pays a fee of 10 guineas An entrant who takes the complete course can attend the general clinical practice of the hospital on payment of 5 guineas for six months or 10 guineas for one year but an entrant who does not take either part of the course and desires to attend the clinical practice of the hospital must pay a fee of 5 guineas for each three months of attendance To enable postgraduates to obtain special

experience in this branch of medicine clinical assistants are appointed from time to time Further particulars may be obtained from the Physician Superintendent, Monks Orchard, Eden Park Beckenham Kent

NATIONAL HOSPITAL QUEEN SQUARE

Special courses for the Diploma in Psychological Medicine are not held at the National Hospital, Queen Square, London W C 1 but lectures are given which cover all the work necessary for the more organic side of the examination—namely, anatomy physiology and pathology of the nervous system and clinical neurology

THE TAVISTOCK CLINIC

The course of training arranged by the Tavistock Clinic (The Institute of Medical Psychology), Malet Place, W C 1, covers the whole field of the psychoneuroses Postgraduate courses of lectures in psychotherapeutic theory and method are given These consist of a six weeks intensive course of lectures and case discussions followed by a systematic course of lectures given twice a week throughout the year, which may be attended by any qualified medical practitioner The year s clinical course is arranged for those who wish to practise psycho therapy, and are prepared to give a minimum of twelve hours a week (attending on three days) The course is limited in membership The full course of the Clinic designed for those who wish to specialize in psychotherapy is a two-year course, application for the second year s course being made by those who have completed the year s clinical course

For the purposes of the University of London postgraduate diploma in psychological medicine, the Clinic provides facilities for the practice in psychoneuroses and early psychoses and in mental retardation and delinquency required under Regulation 3, Section II (*d*) and (*e*), for this diploma

A series of ten lectures on child psychology takes place on Thursdays in the spring and is intended especially for school medical officers of health, members of the maternity and child welfare group of the medical officers of health and others interested in work with children A course of twenty lectures on psycho-physical adaptation, for general practitioners and others will be given in the spring of 1939 and a fortnight s intensive course of lectures on the psychoneuroses will be given early in July each year A week-end course on marital problems will be held on October 1 and 2 while other week-end courses will be arranged as required

THE INSTITUTE OF PSYCHO ANALYSIS

The course of training arranged by the Institute of Psycho-Analysis (London Clinic of Psycho Analysis), 96, Gloucester Place W 1 offers medical students and practitioners the opportunity of acquiring such knowledge of psycho analysis as will qualify them to practise it The curriculum extends over a minimum of four years.

The Public Health Medical Services

The Ministry of Health for England and Wales is a central authority to secure the adoption and effective administration of measures conducive to the health of the people, and to promote research work and the proper training of persons for health services

For the purpose of local public health administration the whole of England and Wales is divided into counties, county boroughs, boroughs and urban and rural sanitary districts The administrative county of London, exclusive of the City of London, is divided into twenty eight metropolitan boroughs

The public health medical services for Great Britain embrace between three and four thousand medical men and women who give whole-time services, and, in addition a large number who give part-time services Barely one half of the medical officers of health of England and Wales are whole time officials but it is certain that their number will be considerably increased in the future, for the Ministry of Health is favourable to whole tim services, and certain provisions of the Local Government Act of 1929 will assist in this connexion Medical officers for these services are appointed by the Ministry of Health for England, and the Boards of Health for Scotland and Wales , and by the many local public health authorities

The Medical Services of the Central Authority

The medical work of the Ministry of Health has been organized under the control of a Chief Medical Officer It is subdivided into seven sections, with a senior medical officer at the head of each About a hundred and twenty medical officers are employed, of whom rather more than one-half are regional and deputy regional medical officers employed for certain duties under the Health Insurance Acts Briefly, the sections deal with environmental hygiene, epidemiology, and international health , maternity and child welfare , tuberculosis and venereal diseases , the supervision of the food supplies , sanitary administration in relation to in fectious diseases national health insurance , and the school medical service Vacancies on the staff are advertised from time to time in the medical journals, and appointments are made by the Minister on the recommendations of a Selection Committee These are Civil Service appointments, subject to the usual conditions as to pension, holidays, etc Medical officers are also employed for similar services by the Welsh Board of Health (Cardiff) and the Department of Health for Scotland (Edinburgh)

The Medical Services of the Local Authorities

These appointments include medical officers of health, tuberculosis medical officers, maternity and child welfare medical officers, venereal diseases medical officers, and school medical officers—who work in the health interests of the school child By the larger local public health authorities assistant medical officers are also appointed, and these posts often serve as stepping stones to the higher offices as vacancies, which are required to b advertised, occur

Medical Officers of Health

The duties of the medical officer of health are to inform himself upon all influences affecting, or threatening to affect, injuriously the public health within his district, to advise his sanitary authority upon all matters relating to health , and to perform all the duties imposed upon him by statutes, by-laws, and regulations He must prepare and submit to his local authority special and annual reports , give immediate information to the Ministry of Health of any serious outbreak of disease, and forward weekly returns of notified cases of infectious disease Subject to the instruction of his sanitary authority, he must direct or superintend the work of sanitary inspection

No person is qualified to be appointed or reappointed as a medical officer of health of any district or combina tion of districts unless, in addition to the qualifications prescribed by any statute, he is also registered in the *Medical Register* as the holder of a Diploma in Pub Health, Sanitary Science, or State Medicine The appoint ment of a medical officer of health is made subject to the approval of the Minister of Health A whole time medical officer of health of a county borough or urba and rural district in England and Wales, a part of whose salary is contributed by the Exchequer, shall not be appointed for a limited period, and shall not be removed from his office except by or with the consent of the Minister of Health

The local authorities must provide for the superannua tion of their officers The scheme requires that if officer is incapacitated by ill-health after ten years o

service or if he has reached 65 years of age he is entitled to superannuation Such superannuation is to be on the following scale after ten years service 10/60 of the average salary which he received during the last five years of employment after eleven years 11/60 and so on up to a maximum of 40/60 after forty years of service The scheme however fails to make due allowance in computing service for purposes of superannuation for the more advanced age as compared with other officials at which the medical officer of health can enter the public service In these two respects the position reached falls short of that for which the British Medical Association has been working for some years

School Medical Officers

School medical officers are appointed by local education authorities Primarily their duty is to detect among the children attending the public elementary schools any physical or mental defect which may retard education and to inform the parents of its existence Most approved schemes of medical inspection include arrangements which facilitate the task of parents in obtaining for their children the necessary treatment check the results of this treatment and keep each defective child under skilled observation both at home and at school until it has passed altogether out of the education authorities hands Indeed, it is now the practice for the education authorities themselves to provide for certain ameliorative work notably the prescription of glasses where necessary dental treatment the removal of adenoids and tonsils and treatment in connexion with certain communicable diseases of the skin and some physical and mental defects The general effect of all schemes alike is to make the inspection imposed by law of benefit not merely to the individual child but to the community at large, by preventing the development of conditions which lead to the existence of inefficient citizens among the adult population The work is so related to that of medical officers of health that, generally the senior school medical officer fills both appointments his work when necessary being supplemented by that of whole or part time assistants A diploma in public health is almost always required of those entering the school medical service of local education authorities

Tuberculosis Medical Officers

A tuberculosis medical officer is an officer with special training and experience in tuberculosis work, and of a suitable age and attainments to command general confidence In England such officers are appointed by county councils and county borough councils and their duties are to carry out the work of diagnosis of tuberculosis to advise as to treatment and to take charge of the work of tuberculosis dispensaries and sanatoria where these are in operation The work under tuberculosis schemes is co ordinated with the general public health work of local authorities, and so the medical officer of health is often appointed as the chief tuberculosis officer even when a special tuberculosis officer is on the staff of the local authority The arrangements in Scotland are very similar In Wales tuberculosis work is carried out under the aegis of the Welsh National Memorial Association, upon which the constituent local authorities are represented and the powers of appointment of tuberculosis officers are vested in the Association

Maternity and Child Welfare Medical Officers

Any local public health authority, however small may make arrangements for maternity and child welfare work within its area although very generally the smaller local authorities are provided for in county council schemes but the Minister of Health may transfer the administration of the maternity and child welfare work of an area to the local education authority where this would conduce to more efficiency For the schemes of the smaller local authorities the services of a part-time medical officer are obtained when the medical officer of health does not himself undertake the duties but for the larger schemes special whole time appointments are made The maternity and child welfare medical officer is responsible for the work at the centres provided and for directing the home visitations and these activities are closely co ordinated with the other branches of public health work directed by the medical officer of health

Much of this work was commenced in different parts of the country by voluntary organizations some of it still remains in their hands but is now fairly closely linked up with the public health local authority and the tendency is for the whole of it to be undertaken by the local authorities A large number of women medical officers have been appointed to the e posts

Venereal Diseases Officers

Schemes for the diagnosis and treatment of venereal diseases are provided and administered by county councils and county borough councils In some cases the officer is on the whole time public health staff and in others he is a part time official Special knowledge and practical experience in the treatment of venereal diseases are required The officer appointed for either whole time or part time service works at one or more clinics and also gives instruction and assistance in the treatment of venereal diseases to general practitioners who if they desire to obtain experience are allowed to attend the clinics

Remuneration in the Public Health Service

In order to ensure that public health authorities may obtain skilled and highly trained medical officers it is essential that such officers should receive salaries commensurate with their attainments bearing a reasonable relationship to the time and money expended in fitting them for their important and responsible duties and comparing well with the income which might be secured in other lines of medical work With this end in view the British Medical Association and the Society of Medical Officers of Health prepared a scale of minimum commencing salaries for whole time public health medical officers

The scale which was put into operation in 1925, was attended with a large measure of success There were however, certain aspects of it which were not entirely satisfactory For instance it was not retrospective and did not, therefore apply to medical officers who had been appointed prior to the date on which it came into force, and it contained no provision for specified increments in salary

As the result of a series of conferences between representatives of the various Associations of Local Authorities, the British Medical Association and the Society of Medical Officers of Health under the chairmanship of Lord Askwith, a Memorandum of Recommendations in regard to salaries of public health medical officers was drawn up and came into force in June 1930 This Memorandum was published in our *Supplement* on July 27 1929 Copies of the Memorandum may be obtained from the Secretary of the Association It has been adopted by the Representative Body and has been accepted by the representatives of the following bodies representing local authorities

The Association of Municipal Corporations
The Urban District Councils Association
The Rural District Councils Association
The London County Council
The Association of Education Committees
The Mental Hospitals Association
The Metropolitan Boroughs Standing Joint Committee

Practically all the local authorities of England and Wales are now applying this memorandum The advertisements of local authorities who are not prepared to put into effect the whole of the recommendations are not accepted by the *British Medical Journal* which in this matter has the co operation of the *Lancet* and the *Medical Officer*

The great advantage of the Memorandum is that it embodies a general agreement as to salaries and conditions of service and is not merely a scale of salaries It is retrospective, and will therefore benefit officers appointed before it came into force It provides stated increments for practically all medical officials except whole-time chief, deputy and chief assistant medical officers of health, who, as chief medical officials may, it is presumed, depend that the commencing salaries mentioned in the agreement will be increased for meritorious work and years of service, and it contains a very valuable provision by which questions of difficulty can be referred to an advisory committee

The British Medical Association represents the profession on the advisory committee, putting the point of view of the public health officers in the discussion of the cases of those who are receiving remuneration less than that laid down in the scale

For the right class of practitioner with leanings in the direction of public health work the service offers an attractive career but it must be recognized that there are comparatively few posts which carry high salaries

Curriculum for the Diploma in Public Health

The following revised Regulations and Rules of the General Medical Council for Diplomas or Degrees in Public Health come into force on October 1, 1938

1 A period of not less than two years shall elapse between the attainment by a candidate of a qualification in medicine, surgery, and midwifery and the grant of a diploma or degree in sanitary science, public health or State medicine

2 The curriculum for a diploma or degree in sanitary science public health or State medicine shall extend over a period of not less than (*a*) twelve calendar months of which not less than three consecutive calendar months shall be devoted to the whole-time study of the subjects comprised in Rule 3 *or* (*b*) an academic year of whole-time study covering a period of not less than nine calendar months, subsequent to the attainment of a medical qualification

3 Every candidate shall produce evidence of satisfactory and regular attendance on a course lasting not less than 280 hours at an institution approved by the licensing body granting the diploma or degree during which he shall have received (*a*) theoretical and practical instruction in bacteriology and parasitology (including immunology serology, and medical entomology) in relation to the public health, (*b*) instruction in the application of the principles of physiology and biochemistry to environmental and personal hygiene and to the public health (*c*) instruction in the application of the principles of chemistry and physics to environmental and personal hygiene and to the public health, including the methods of examination and purification of water and sewage, the composition and various forms of adulteration of the more common foods the nature (and methods of estimation) of pollution of the atmosphere and methods of disinfection and disinfestation

4 Every candidate shall produce evidence of satisfactory and regular attendance on a course lasting not less than 160 hours at an institution approved by the licensing body granting the diploma or degree during which he shall have received instruction in the following subjects (*a*) the principles of hygiene sanitation and public health (*b*) epidemiology and vital statistics (including statistical method) (*c*) public health law and administration (including social insurance public medical services and hospital administration) (*d*) industrial hygiene and the welfare of industrial workers, (*e*) house planning and sanitary construction (*f*) the principles of genetics (*g*) mental hygiene

5 Every candidate shall produce evidence that he has attended satisfactorily and regularly for three months on the clinical practice of a hospital for infectious diseases approved by the licensing body granting the diploma or degree

6 Every candidate shall produce evidence that he has during a period of not less than six months been engaged in acquiring a practical knowledge of the duties, routine and special of public health administration under the supervision of a medical officer of health who shall certify that the candidate has received from this officer or other competent officer during not less than three hours on each of sixty working days practical instruction in these duties, including those of (*a*) maternity and infant welfare service, (*b*) health services for young children and children of school age, (*c*) venereal diseases service, (*d*) tuberculosis service, (*e*) industrial hygiene, (*f*) hospital services (*g*) mental health services (*h*) inspection and control of food, including meat and milk *Note*—Instruction in the matters specified under the foregoing heads (*a*) to (*h*) should include attendance at the centres clinics, institutions and premises concerned

Certificates of having received the prescribed instruction in public health administration must be given by a medical officer of health who devotes his whole time to public health work of an area approved by the licensing body granting the diploma or degree

7 The examination for the diploma or degree shall be divided into two parts, Part I and Part II each of which shall extend over not less than two days, and shall be conducted by examiners specially qualified A candidate must pass Part I before being admitted to examination for Part II, and in both parts a candidate must pass in all the specified subjects at one time

8 The examination for Part I shall include written and oral examinations in the subjects comprised in Rule 3 together with a practical laboratory examination in the subjects specified in Rule 3 (*a*) Candidates shall not be admitted to examination for Part I until after they have completed the prescribed courses of instruction in the subjects thereof

9 The examination for Part II shall include the subjects referred to in Rules 4 5 and 6 The examination shall be written and oral, and shall include clinical examinations in infectious diseases, and practical examinations in food inspection and inspection of premises, including dwellings, factories workshops, and schools Candidates shall not be admitted to examination for Part II until after they have completed the prescribed courses of instruction in the subjects thereof

Note—The observance of these Rules does not prevent any licensing body granting the degree or diploma, or any institution approved by such Body, from requiring a larger number of hours than those specified to be spent in the study of prescribed subjects, or requiring instruction to have been given in subjects additional to those prescribed Indeed, the use in Rules 8 and 9 of the word 'include' implies that knowledge of other subjects may be tested as part of the examination The duties of local authorities and their medical officers are constantly being extended by legislation and modern scientific research is making available in new directions knowledge of the greatest importance to medical officers of health and to other medical officers engaged in public health work

Training and Examining Centres for Public Health Qualifications

Degrees in Sanitary Science, Hygiene, or Public Health are conferred, in England, by the Universities of London Durham, Liverpool, and Birmingham, in Scotland, by the Universities of Glasgow and Edinburgh, and in Eire by the National University of Ireland In most cases these degrees are conferred only upon medical graduates of the universities granting them

Whereas the requirements of the General Medical Council for the Diploma of Public Health are strictly conformed to, these requirements are extended, as a rule as to both the period and the scope of special studies demanded, before Degrees in Sanitary Science are granted

Most universities in Great Britain and Ireland grant a D P H and provide for the necessary training The Irish English and Scottish Conjoint Boards and the Irish Colleges also grant these diplomas The School of Physic of Trinity College, Dublin, was the first body in the British Isles to arrange for courses of instruction and for a Diploma in Public Health At Cambridge the teaching

and training courses for the D P H were terminated at the end of 1931

In London the postgraduate teaching and training in public health is provided mainly at one centre—the London School of Hygiene and Tropical Medicine (University of London), the only other training centre which offers such facilities is the Royal Institute of Public Health, Queen Square Bloomsbury W C 1

The course of study for the D P H provided by the London School of Hygiene and Tropical Medicine (Keppel Street Gower Street London W C 1) which is a school of the University of London covers a period of nine calendar months in the case of whole time students and is designed so that students can proceed to the academic diploma of the University of London A uniform date of entry is essential in a course of this nature and students must commence work at the beginning of the autumn term The session opens on September 26 Full time attendance is essential for Part I of the course (September–December) but candidates selected for certain appointments in the London County Council's special hospitals will be admitted to Part II of the course as part time students Examinations in Parts I and II of the Academic Diploma in Public Health of the University of London are held—Part I in January and June and Part II in July September and January The School undertakes research work in preventive medicine and members of the public health services have a common room placed at their disposal and are invited to attend staff and special lectures

The University of Liverpool grants a Diploma in Public Health to medical practitioners eligible under the rules drawn up by the General Medical Council The course of study for the diploma extends over a period of not less than twelve calendar months (or an academic year of whole time study covering a period of not less than nine calendar months) subsequent to the attainment of a medical qualification The examinations for Part I are held annually in March and June and for Part II in June and October On the recommendation of the examiners the diploma may be awarded with a mark of distinction in the case of candidates who reach a required standard. All particulars regarding courses of study examinations and fees can be obtained on application to the Dean of the Faculty of Medicine

The University of Manchester has a well equipped department of bacteriology and preventive medicine where candidates preparing for the examinations of the various university and examining boards for the Diploma in Public Health can obtain instruction It also prepares candidates for the Diploma in Bacteriology granted by the university Full particulars can be obtained from the Dean of the Medical School the University, Manchester

The University of Wales grants a Diploma in Public Health under conditions which comply with the requirements of the General Medical Council Examinations are held twice yearly for Part I in December and April and for Part II in January and October Candidates must hold an approved medical qualification and have taken the courses of study for the diploma at the Welsh National School of Medicine a constituent School of the University The whole time courses for Part I begin in mid September and finish in December an examination for this part following immediately Part II courses commence in January and continue until the end of September The courses for Part II are so arranged as to permit of part time study The Institute of Preventive Medicine situated in Cardiff is equipped with laboratories for teaching and research in public health and a library is provided for the use of students The Public Health Departments of the City of Cardiff and the County of Glamorgan and the Joint Public Health Laboratories provided by these authorities which are accommodated in the Institute form the centres of practical instruction their medical officers of health bacteriologists and chemists being lecturers in the department of preventive medicine of the school In the public health departments of Cardiff and Glamorgan a limited number of salaried half time posts are open to medical men and women who are studying for Part II of the diploma in the Welsh National School of Medicine Applications for such appointments should be made to the respective medical officers of health Further particulars may be obtained from the Secretary the Welsh National School of Medicine 10 The Parade Cardiff

The University of Edinburgh grants a Diploma in Public Health The course which extends over an academical year of nine months full time study can be commenced in October only and provision is made by the university for instruction in all the subjects Candidates for the diploma must be graduate in medicine and surgery of the University of Edinburgh or must hold recognized degrees or medical qualifications The course for the diploma is divided into two parts for each of which examinations are held twice annually In each part the candidate must pass in all the specified subjects at one examination The diploma cannot be awarded until after the lapse of at least two years from the date of obtaining a recognized medical qualification

The University of Glasgow confers the B Sc (P H) and the D P H and conducts complete qualifying courses for both at its Institute of Hygiene and for administrative work in the Public Health Department of the city The course for the diploma is divided into two parts and admission to the examination is contingent upon the candidate having complied with the following conditions which apply also to the Edinburgh D P H

PART I.—(*a*) Completion subsequent to obtaining a registrable medical qualification of the course of instruction prescribed for Part I

PART II.—(*b*) Completion subject to obtaining a registrable qualification of the course of instruction prescribed for Part II (*c*) a lapse of two years after obtaining a registrable qualification (*d*) previous passing of examination in all subjects of Part I

Qualifications in Tropical Medicine and Hygiene

The University of London grants a degree (M D in Tropical Medicine) to its medical graduates A course of training is normally required extending over at least one academic year

The Services

ROYAL NAVAL MEDICAL SERVICE

The Royal Naval Medical Service offers to well-qualified medical men a satisfactory career with good opportunities for the practice of their profession and for specialization in many subjects good pay and the prospects of promotion to the higher ranks with an adequate pension on retirement

Entrance is on a short service basis for an initial period of three years to be extended to five years at the discretion of the Admiralty Officers leaving the Service at the end of three years are eligible for a gratuity of £400 while those who leave at the end of five years receive £1 000

On appointment new entrants undergo an initial course during which they receive instruction in the naval aspects of medicine and the organization and administration of the Naval Medical Service This is followed by a period of service at one of the principal naval barracks or hospitals and is succeeded by various periods of service at home or abroad afloat or ashore as required

General medical and specialist courses of duration varying from three to six months are arranged and this postgraduate instruction is supplemented by the promotion course referred to under Promotion below

Officers may be transferred to the Permanent List at the discretion of the Admiralty during the year in which they attain four years seniority as surgeon lieutenant A gratuity of £1 000 (less income tax) is paid but the officer is required to render a minimum of twenty five years service in order to qualify for full pension including seniority granted if any in respect of civil hospital time With regard to the latter ante date of seniority of not more than one year may be allowed in respect of whole time or resident appointments in civil hospitals held prior to entry to the Royal Naval Medical Service The ante date counts for seniority and eligibility for increase of pay and if the officer is transferred to the Permanent List it counts also as service for the purposes of promotion and retired pay or gratuity on retirement

Opportunities are afforded for officers to specialize during the course of their career and the number of specialist posts carrying additional emoluments is over eighty five

Candidates should preferably be between the ages of 24 and 28

MEDICAL OFFICERS FULL PAY MARRIAGE ALLOWANCE AND RETIRED PAY

(Annual Amounts calculated to nearest £)

	Full pay of Single Officers and Married Officers under 30 (See Note *(a)*)	Full pay of Married Officers over 30 (See Note *(b)*)	Maximum Pension for Officers over 40	Retires at Age of
	£	£	£	
Surgeon Lieutenant on entry	438	522		
After 3 years	478	562		
Surgeon Lieutenant Commander on promotion	541	624	40	45
After 3 years	575	657		
Surgeon Commander on promotion	706	788		
After 3 years	773	855		
6	840	922		
9	906	989	543	55
12	964	1 046		
15	1 022	1 104		
Surgeon Captain on promotion	1 037	1 138		
After 3 years	1 119	1 220		
6	1 201	1 302	815	57
9	1 284	1 384		
Surgeon Rear Admiral*	1 734	1 734	915	60
Surgeon Vice Admiral (Medical Director General of Navy)	2 263	2 263	1 082	On vacating office

Notes.—*(a)* Lodging allowance at the rate of £80 per annum is payable when service accommodation is not provided As a general rule lodging allowance will not be payable concurrently with marriage allowance *(b)* Children's allowances are paid in addition at the following rates 2s a day for first child 1s a day for each subsequent child

PROMOTION

Promotion to surgeon lieutenant commander and surgeon commander is automatic, subject to the necessary minimum of sea time being served and to satisfactory reports Surgeon lieutenant-commanders undergo a five months course of instruction followed by an examination as a result of which accelerated promotion to surgeon commander can be gained In the higher ranks promotion is strictly by selection The total number of surgeon captains and officers above that rank is forty one Every permanent officer becomes eligible for selection for a higher post after eight years' service as surgeon commander, and promotion usually takes place after eleven to twelve years service in that rank

Provision allowance and lodging allowance are paid when victualling and accommodation are not provided

The extra allowances alluded to in the above table are not to be looked upon as very exceptional About a quarter of the medical officers of the Navy are drawing extra allowances

GRATUITIES

When officers are permitted to withdraw instead of receiving pension gratuities are payable on the following scale

	£
Over 10 and under 15 years service	500
15 18	1 800
18 years service	2 700

ALLOWANCES

(a) In addition to marriage allowance (which is included in full pay of married officers—see table above) children's allowance and lodging allowance the following allowances are also payable

When in charge of hospitals and sick quarters	10s and 5s a day
Specialist allowances	5s a day
Senior medical officers in flagships	5s and 2s 6d a day
Provision allowance when victualling is not provided	£47 per annum at present

(b) Married officers over 30 appointed on shore at home for periods over three months will receive a removal allowance

(c) Married officers over 30 employed on shore abroad will receive free passages for their wives and families

UNEMPLOYED AND HALF PAY

In the case of surgeon lieutenants lieutenant commanders and commanders a distinction is drawn between officers awaiting employment and holding themselves at the disposal of the Admiralty, and those who are unemployed at their own request or in consequence of misconduct In the former case officers will receive unemployed pay as follows

		Daily rate £ s. d.
For the first six months	Full pay of rank and seniority (without allowances)	
For the next six months	Lieutenants	13 7
	Lieutenant Commander	1 0 4
	Commanders	1 4 11

And thereafter half pay varying between 6s 9d and 23s 6d a day according to rank and seniority In the latter case officers will receive half pay at the rates indicated above

In actual practice half pay and unemployed pay are very seldom applicable to Medical Officers below the rank of surgeon captain

Applications—No examination for entry is held but candidates will be required to present themselves before a Selection Board of the Admiralty, presided over by the Medical Director General of the Navy, Admiralty London to whom application should be made for further details

General—The cost of living in a Naval mess afloat or ashore is very moderate, and does not as a general rule exceed £10 a month

Naval Dental Service

Candidates for this Service must be below the age of 28 registered under the Medical or Dental Acts and possess a registrable qualification in dental surgery Particulars including the rates of pay and allowances also withdrawal gratuities and retired pay can be had from the Medical Director General of the Navy Admiralty S W 1

ROYAL ARMY MEDICAL CORPS

The Royal Army Medical Corps offers to well qualified medical men a satisfactory career, with good opportunities for the practice of their profession and specialization in many subjects, good pay and prospects of promotion to the higher ranks with an adequate pension on retirement

The appointment of officers to the R A M C is, in the first instance, by means of a short-service commission for a period of five years In the fourth year of service an officer is given the choice of retiring with a gratuity of £1,000 at the end of five years service or of applying for a permanent commission in either the Royal Army Medical Corps or the Indian Medical Service In the reorganized service, introduced as a result of the recommendation of the Warren Fisher Committee, the prospect of promotion to the higher ranks necessarily depends upon a rigid control of entry into the permanent service It is not possible on this account to say exactly what proportion of officers who now enter the Corps will be eligible for permanent commissions, but in all probability about 50 per cent will have the opportunity of doing so Those retiring with a gratuity after five years' service are liable to be called up for duty in the event of a national emergency arising during the twelve years following their retirement

New entrants are commissioned in the rank of lieutenant, and the first three months of their service are on probation, during which time they undergo a course at the Royal Army Medical College, London, in hygiene, tropical medicine, entomology, etc, in addition to their military training at the Royal Army Medical Corps Depot at Aldershot A grant of £50 is made for the purchase of uniform

Secondment for Civil Posts

An entrant who is holding or who is about to hold at the time of entrance an approved whole time appointment at a recognized civil hospital may be seconded while holding such appointment up to a maximum period of twelve months A candidate who has held such an appointment within six months of entry may be granted an ante date up to two months in respect of the period the appointment was held

The period of secondment or ante date will not reckon in diminution of the period of five years which he is required to serve on a short service commission but on completing one year of actual service in the R A M C the period of secondment or ante-date will count for seniority If appointed to a permanent commission the period of secondment or ante date counts as service for promotion to the rank of major increases of pay in the ranks of captain and major and retirement on retired pay or with gratuity

Promotion

Promotion to captain is after one year's commissioned service on full pay If appointed to a permanent commission promotion to the rank of major is on completion of ten years commissioned service Promotion to the ranks of lieutenant colonel and colonel is by selection to fill vacancies within the establishment which is designed to allow promotion to those ranks on the average after seventeen and twenty five years service respectively

Professional Opportunity

The possibilities for good work are very great There is scope for original research in tropical diseases in preventive medicine and in bacteriology as well as in the large clinical field open to the specialist in medicine surgery gynaecology diseases of the ear nose and throat ophthalmology and venereal diseases Child welfare is also undertaken systematically by officers of the R A M C

Young officers having special qualifications or experience in particular branches of medicine or surgery can if found sufficiently expert be graded as Physician Otologist Gynaecologist Surgeon Ophthalmologist Pathologist Radiologist Hygienist Dermatologist and Anaesthetist They would then be eligible to fill specialist appointments which carry additional pay

Foreign Service Postgraduate Study

The tour of foreign service in India Burma and Egypt is five years in Gibraltar and Malta four years and in other stations three years but in the case of those officers retiring on a gratuity after five years service arrangements would be made for them to return to England at public expense by the end of that period

A permanent commissioned officer between his sixth and tenth year of service undergoes a course of postgraduate study at the Royal Army Medical College and the London hospitals of five months duration followed by a course of study of a special subject selected by himself provided he has shown special aptitude in the postgraduate course or during his previous service During this course of study he *remains on full pay and the fees for the course are paid by* the State When qualified in his special subject the officer up to and including the rank of lieutenant colonel becomes entitled to specialist pay at 4s 6d per day when holding a specialist appointment.

Pay and Allowances Retired Pay etc

The present rates of pay and allowances and retired pay are given in the following tables In addition an officer at home below the rank of colonel in charge of a hospital of fifty beds or more receives charge pay at the rate of 2s a day There are also available specialist appointments which carry with them an additional rate of pay of 4s 6d a day

Rank	Pay (per annum) approx.	Allowances (Home Rates) approx.	
		Married	Single
	£	£	£
Lieutenant	362	198	134
Captain	447	237	134
Captain after 6 years service	496	237	134
Captain after 8 years service	535	237	134
Major	621	240	173
Major after 13 years service	703	240	173
Major after 16 years service	747	240	173
Major after 18 years service	827	240	173
Major after 22 years service	891	240	173
Lieutenant-Colonel	949	240	202
Lieutenant-Colonel after 3 years service as such	1 031	240	202
Colonel	1 156	277	227
Major-General	1 510	433	383

Pay in India is appreciably higher than that at home

General—The pay of officers even in the lowest rank is ample to enable them to be independent and the expenses of R A M C messes are kept under strict supervision so that all tendency to extravagance may be checked and junior officers prevented from finding difficulty in living on their pay

Retired pay consists of two parts (*a*) a service element based on the officer's total service (*b*) a rank element for the substantive rank from which the officer retires An officer with less than twenty complete years service will not be eligible to retire voluntarily on service retired pay

The following are the maximum current rates of retired pay

Rank	Yearly Rate of Retired Pay	Compulsory Retiring Age
	£	
Major	407.5	55
Lieutenant-Colonel	547	55
Colonel	729	57
Major-General	950	60
Lieutenant-General	1 120	60 (or on completion of tenure)

Gratuities

A short service officer not appointed to a permanent commission may retire with a gratuity of £1 000 after five years service as a medical officer Such an officer is liable during the twelve years following retirement to be recalled to service at a time of national emergency Officers holding permanent commissions with less than twenty years service as medical officers may be permitted to retire with gratuities in accordance with the following scale

With less than 10 years service as a medical officer	£1 000
After 10 years service as a medical officer	£1 500
After 15 years service as a medical officer	£2 500
After 18 years service as a medical officer	£3,500

Applications—Entry takes place twice yearly at the beginning of May and November The regulations for admission giving full details can be obtained from the Under Secretary of State (A M D 1) War Office Whitehall London S W 1 and should be carefully studied A personal interview with a representative of the Director General Army Medical Services is readily obtainable

MEDICAL BRANCH OF THE ROYAL AIR FORCE

The Air Council attaches great importance to attracting into the service the best type of medical man since on the capacity of the Medical Branch depends in a peculiar degree the safety and efficiency of the Air Force The duties of a medical officer in the Air Force include not only the prevention and treatment of those ordinary diseases to which the personnel of any fighting service are liable but the special study of the mental and physical stresses imposed on the airman in diverse circumstances and climates—a new branch of medicine which still provides considerable scope for research

With the Air Force now increasing enormously the prospects offered by the study of the special medical aspects of aviation are greatly enhanced while there should be available many more opportunities for gaining experience and for employment in specialist and general medical work and in administrative posts

As promotion to the higher ranks of the Service is by selection and as a certain proportion of the higher ranks are reserved for purely professional as opposed to administrative appointments it will be seen that there are excellent prospects for the young medical officer who exhibits ability and energy in his professional work The work to be done therefore has a high professional interest combined with good rates of pay and allowances so that a career is offered to those who are selected for permanent commissions which should prove both attractive and interesting The life is one which is certain to appeal to the man of wide outlook who desires opportunities for

travel, sport, and games, and can find interest and enjoyment in aviation His duties will, as a matter of course, give him flying experience as a passenger, which is necessary for the proper study of the medical problems of aviation and for gaining first-hand knowledge of the conditions under which his comrades serve He may also, if he wishes, learn to fly when this can be done without interference with his duties

COMMISSIONS

The establishment consists partly of permanent and partly of short-service officers and an officer on entry is granted a short-service commission for a period of three years on the active list (which may be extended to five years) and of four years in the Reserve of Air Force Officers Selections for permanent commissions are made from officers holding short-service commissions who are considered to be suitable and who desire a life career in the Service Those who are not selected are transferred to the Reserve at the expiration of their period of service on the active list

But the short service commission with its gratuity after three or five years is in itself an attraction to many entrants who desire to enlarge their experience and outlook from the point of view of subsequently entering private practice and who on entry have not made up their minds to the adoption of a permanent career in the Service

For certain purposes medical officers may be allowed to count as service their time spent in approved whole time post-graduate appointments in civil hospitals under certain well-defined and generous conditions

At about five years service all permanent officers who are judged suitable will be given the opportunity to take a course of specialist study towards the expense of which an allowance is made The period allowed will vary with the subject of study but usually about nine months will be available to each officer during which full pay and allowances will be issued Their subsequent career will normally be as follows Approximately three quarters of the employment of squadron leaders and senior flight lieutenants is in specialist posts though these are not generally of a full time specialist character On reaching the rank of wing commander the policy is to allow a proportion of officers to become permanent specialists and to be employed continuously throughout the remainder of their career in full-time specialist posts In addition there are a number of hygiene posts in the rank of wing commander open to specialists in that subject, thus further increasing the proportion of specialist posts open to officers In the rank of group captain, apart from the posts already mentioned as available for the permanent specialist, employment is nearly equally divided between posts in charge of a large hospital and headquarter administrative posts This statement indicates the position as regards specialist employment as at present foreseen

New entrants into the Royal Air Force Medical Branch are commissioned as Flying Officers (Medical), and are eligible for promotion to the rank of Flight Lieutenant (Medical) after one year's service on full pay Accelerated promotion to the rank of Squadron Leader may be granted at any time after eight years service to officers qualified to hold specialist appointments, those officers who are not so qualified will be eligible for promotion to this rank after ten years total service Promotion within establishment to the ranks of Wing Commander and above is by selection The number of permanent commissions granted yearly is regulated with a view to all suitable permanent officers being promoted to Wing Commanders and of a substantial proportion of Wing Commanders being promoted to Group Captains

There is no competitive examination on entry, candidates, who must be under 28 years of age (as a temporary measure applications will be considered from candidates up to 31 years of age) are interviewed by a Board presided over by the Director of Medical Services, Royal Air Force, before acceptance Each candidate must produce 1 Birth certificate 2 Medical registration certificate 3 A declaration containing the following information (*a*) age and place of birth (*b*) that he is a British subject, the son of British subjects, and of pure European descent, (*c*) that he is ready to engage for general service at home or abroad as required, (*d*) the qualifications he is possessed of and what medical or other appointments he has held (if any), (*e*) that he is willing to fly as a passenger whenever called upon to do so

Each candidate is required before acceptance to pass a medical examination to ensure that he labours under no constitutional or mental disease or weakness or any imperfection or disability which may interfere with the efficient discharge of the duties of a medical officer in any climate in peace or war

On appointment entrants undergo an initial course of three months during which they are given instruction in the special medical aspects of aviation hygiene and tropical medicine the organization and administration of the Royal Air Force, and the general and special duties to be performed by officers in the Medical Branch

UNIFORM AND EQUIPMENT LEAVE

An allowance of £50 towards the cost of uniform is normally made on joining Subject to the exigencies of the service, officers at home are allowed ordinary leave up to sixty one days in a year, officers abroad may accumulate leave up to ninety one days which may be taken on return home Full pay is granted for ordinary and accumulated leave

EMOLUMENTS

The emoluments of medical officers of the Royal Air Force are given in outline below The rates of pay are fixed on an inclusive basis and the fact that specialist pay and charge pay are not payable as separate emoluments was taken into account when the rates were fixed

In addition to pay officers receive quarters (with fuel and light) rations, and attendance or, if these are not available in kind they are given cash allowances in lieu as shown in the table The rates and general scheme of allowances are subject to review as circumstances may require Married officers who have attained the age of 30 years or reached the rank of Squadron Leader receive either married quarters or allowances at the married rates

Rank	Pay (per annum)	Allowances (per annum) (Present Home Rate)	
		Married	Single
	£	£	£
Flying Officer	395	198	125
Flight Lieutenant	429	237	125
Ditto after 2 years as such	462	237	125
Ditto after 4 years as such	496	237	164
Squadron Leader	645	240	164
Ditto after 2 years as such	709	240	164
Ditto after 4 years as such	742	240	164
Ditto, after 6 years as such	809	240	193
Wing Commander	909	240	193
Ditto after 2 years as such	943	240	193
Ditto after 4 years as such	1 040	313	254
Group Captain	1 156	370	315
Air Commodore	1 320	433	376
Air Vice Marshal	1 652		

Special allowances are applicable at stations abroad

RETIRED PAY AND GRATUITIES

The minimum period of service qualifying for retirement on retired pay is twenty years The maximum rates of retired pay and the compulsory retiring ages for the several ranks are

Rank	Yearly Rate of Retired Pay	Compulsory Retiring Age
	£ s	
Air Vice Marshal	914 10	60
Air Commodore	860 0	59
Group Captain	814 10	57
Wing Commander	543 0	55
Squadron Leader	452 10	55

A permanent officer allowed to retire before having qualified for retired pay may be granted a gratuity, namely

After 5 but less than 10 years commissioned service	£1 000
After 10 but less than 15 years commissioned service	£1 500
With 15 or more than 15 years commissioned service	£2,)

Short-service officers who complete their full period of service on the active list will normally be granted gratuities as follows on transfer to the Reserve

After 3 completed years	£[illegible]
After 5 completed years	£1 000

These gratuities will not be payable to officers granted permanent commissions but their service on a short service commission will count towards retired pay

DISABILITY AWARDS WIDOWS PENSIONS ETC

Permanent medical officers invalided from the Royal Air Force are eligible for retired pay or gratuity however short their service may have been If the disability in consequence of which they are invalided is attributable to the conditions of their service and is assessed at 20 per cent or more they receive an addition varying according to the degree of disablement to the retired pay or gratuity for which they may be eligible Provision is also made in the regulations for pension to the widow and allowances to children or dependants of a deceased officer

GENERAL

The pay of officers even in the lowest rank is ample to enable them to be independent and the expenses of Air Force messes are strictly limited in order to check all tendency to extravagance and to prevent even the most junior officer from finding difficulty in living on his pay The regulated limit of the daily rate of messing is 5s and the average rate at present charged at home stations is 3s 6d Subscriptions and the cost of mess entertainments are charged according to an officer's rate of pay and an unmarried officer taking his full share in the life of the mess should not incur a mess bill of more than £10 a month (6s 8d a day) This sum would include a wine bill of £1 a month (an actual average figure) but would not include goods such as tobacco bought through the mess

INDIAN MEDICAL SERVICE

The Indian Medical Service offers a permanent career with wide opportunities of medical experience including clinical preventive specialist, and research work Admission of European doctors to the Service is by selection and nomination by the Secretary of State for India and inquiries should be addressed to the Secretary, Military Department, India Office Whitehall S W 1

Candidates should be under 32 years of age and must possess a qualification registered in Great Britain and Northern Ireland under the Medical Acts in force, or an Indian medical qualification recognized under Section 11 (1) of the Indian Medical Council Act 1933, and registered in British India under one of the Provincial Medical Acts Officers are appointed in the rank of Lieutenant and are normally promoted to Captain on completion of one year's full pay service

COMMISSIONS AND APPOINTMENTS

All European officers are appointed to *permanent* commissions but they may retire voluntarily with a gratuity of £1 000 after six years service or £2,500 after twelve years service In such cases officers are provided with free passages to the United Kingdom

Although the Service is primarily a Military Service 142 posts under the civil administration are specifically reserved for officers of the Indian Medical Service (Civil) European officers are appointed to 115 of these and are eligible together with Indians for appointment to 24 of the remainder These posts include civil surgeoncies which provide for the medical needs of civil officers and for general medical administration, specialist appointments as physicians surgeons and gynaecologists etc at civil hospitals research posts and professorships at important medical schools Officers are not normally eligible for transfer to civil employment until they have done at least one year's service in India Except in the case of officers who are specially selected for certain appointments transfers to civil employment are not usually made until the completion of four or five years service in India

In addition to the above rates various allowances are admissible for a large number of special appointments on both the military and the civil side which may be held by members of the Indian Medical Service Special rates of pay are also attached to numerous administrative appointments

RATES OF PAY

Year of Service	Rank	Basic Pay Rs per mensem	Oversea Pay £ per month	Total £ per annum
1	Lieutenant	450	15	585

25		1,400	40	1 830

NOTE—(1) The rupee is at present stabilized at a rate equivalent to 1s. 6d of Lieutenant-Colonel before completion of the rate of Rs 1,200 per mensem (basic) *plus*

(3) Sterling oversea pay is admissible only in the case of officers who at the date of their appointment to the Indian Medical Service had their domicile elsewhere than in Asia.

ANTE DATES IN COMMISSION

Candidates possessing certain higher medical qualifications may be granted an ante-date of one year in their commissions and candidates possessing a D P H receive an ante-date of six months An officer who has held an approved whole time appointment in a civil hospital is also eligible for an ante date equivalent to the period of his appointment but not exceeding one year Persons holding or about to hold such appointments may be seconded in those posts for a period not exceeding one year The maximum period of ante-date or ante-date and secondment combined is limited to eighteen months An officer granted an ante-date of twelve months is promoted Captain on arrival in India

Periods of ante-date or secondment count as commissioned service for the purposes of increments of pay promotion and retired pay but not for gratuity

OUTFIT ALLOWANCE PRIVATE PRACTICE

Officers on appointment will receive an allowance of £75 towards the cost of outfit

With the exception of administrative officers military or civil and officers holding certain special appointments officers are not debarred from taking private practice so long as it does not interfere with their proper duties

LEAVE

Leave can be taken at reasonable intervals and adequate rates of leave pay are provided Extra leave (known as study leave) which may not exceed twelve months in all during an officers service may be granted to officers desirous of pursuing special courses of study of a postgraduate nature During such leave study allowance at present fixed at the rate of 12s a day in the United Kingdom £1 a day on the Continent of Europe and £1 10s a day in the United States of America and Canada is granted to an officer in addition to ordinary rates of leave pay

PENSIONS

The rates of pension are as follows

	Per annum £ s
After 17 years service for pension	372 0
18 "	400 0
19	428 0
20 "	465 0
21	502 0
22 "	539 0
23 " "	576 0
24 " "	614 0
25	651 0
26 " " "	697 10
27	744 0

There are additional pensions ranging from £65 to £350 per annum for officers who have held administrative appointments as Colonels or Major Generals Officers who elect to remain in civil employment after seventeen years service will not be promoted above the rank of Lieutenant-Colonel but will be eligible for higher pensions

PASSAGES

An officer on appointment is provided with free passage to India The families of officers who are married prior to the date of the officers embarkation on first appointment will also be provided with free passage to India subject to the payment of messing charges Officers of non-Asiatic domicile and their families are also eligible for passage concessions under which they are granted a certain number of return passages home for themselves and their wives and children at Government expense during their service

INSTRUCTION PRIOR TO EMBARKATION

Officers are required to undergo courses of instruction at the Royal Army Medical College and at Aldershot, lasting approximately three months prior to their embarkation for India on first appointment Information as to the rates of pay admissible during this period and subsequently up to arrival in India is contained in the memorandum referred to below

A detailed memorandum regarding these appointments and forms of application may be obtained from the Under-Secretary of State for India Military Department, India Office, London, S W 1

The Army Dental Corps

The corps is administered by the Director General, Army Medical Services The regulations for admission to the Army Dental Corps should be obtained from the Under Secretary of State War Office, and carefully studied

LOCAL GOVERNMENT HOSPITAL SERVICES

The growth of the local government hospital during the last few years has brought into existence not only greatly extended and modernized hospital provision for the public but new medical staffs in the employment of local authorities and also new teaching facilities, of which many medical schools have taken advantage In London alone, for example, the general and special hospitals of the County Council employ a staff of 400 medical officers and over 250 consultants, and seventeen of the hospitals are linked with the medical schools for teaching purposes The Royal College of Surgeons some time ago recognized sixteen of the general hospitals of the L C C for the purpose of qualification for admission to the final examination for the Fellowship The same hospitals have since been recognized by the Examining Board in England set up by the Royal Colleges for the purpose of the regulations for obtaining the diploma in anaesthetics (D A, R C P and S Eng) Eighteen of the Council s hospitals have been granted recognition by the British College of Obstetricians and Gynaecologists as establishments at which the medical staff may qualify for candidature for the diplomas or membership of the College

"Appropriated" Hospitals

These local government hospitals have in most cases arisen by a metamorphosis from the old Poor Law infirmaries Altogether 109 hospitals, containing a total of 57,318 beds, have been "appropriated" from the Poor Law as general hospitals under public health powers (besides seventy-four hospitals for other public health purposes) Of this number thirty eight belong to the London County Council forty-nine to county boroughs in England and twenty-two to county councils Instead of being as formerly under the control of boards of guardians and other minor authorities, they are administered by county and county borough councils No longer are they regarded merely as institutions for the reception of the chronic sick they have assumed the curative and research functions of the voluntary hospital Under the more progressive authorities the old institutions have become unrecognizable, with, in the general hospital, new receiving wards, out-patient departments, more and better maternity accommodation, modernized operating theatres and sanitary annexes, the provision and extension of nurses' homes and central kitchens, and, at the special hospitals, isolation blocks, additional accommodation for patients and staff, and various reconstruction and improvement schemes

At the end of 1937 there were in England 122 institutions or hospitals under the Public Health Acts and 406 public assistance institutions or hospitals, as compared with 62 and 528 respectively in 1931 Of the total beds the numbers have changed from 36,000 public health and 85,500 public assistance in 1931 to 60,000 public health and 64,000 public assistance, and the time should not be far distant when the majority of the beds in local authorities hospitals will be provided under public health powers The total of in-patient admissions to both types of hospital in 1937 was 781,191, an increase of over 50,000 on the year before and out patient attendances—largely for continuation treatment of patients previously admitted to the wards—numbered 1,921,769, a gain on the year of nearly 250,000 An indication of the increasing volume of treatment provided for acute conditions at these hospitals is to be found in the fact that the total of major surgical operations under general anaesthetics increased to close upon 131,000 last year

The differentiation between the voluntary and the municipal hospital every year becomes less definite, and thus the need becomes greater for their co operation By one of the sections of the Local Government Act, 1929, which brought about all this municipal development, the local authority is instructed to consult with the voluntary hospitals and their professional staffs with regard to the extension of hospital accommodation In some areas this has been done, and the range of subjects for consultation has been enlarged witness the splendid example of Manchester, where the first Joint Hospitals Advisory Board was set up in 1935, of Liverpool, where a Joint Advisory Committee was formed in 1936, and of Oxford and district, where a similar movement has taken place In the area of the West Riding County Council, where new hospital accommodation to the extent of 1,250 beds is being provided, with the proposed building of two new local authority hospitals, one between Doncaster and Barnsley and the other to the north of Leeds and Bradford, the county council is co-operating with the governing bodies of voluntary hospitals for the provision of specialized forms of treatment Again, the Bristol City Council has approved a scheme whereby teams of specialists in medicine and surgery will be available for the hospitals under control of its health committee, and the scheme is being worked in association with the committees of the two principal voluntary hospitals

Altogether the municipal or county hospital is assuming an important place in the hospital picture The change in administration has coincided with a change in public sentiment The institutions which were disliked and dreaded by the poor while they remained Poor Law infirmaries, and were generally disregarded by the medical profession also, have now become popular, and their popularity extends beyond the class of persons they were originally intended to benefit

The London County Council Services

The London County Council is the largest of the local authorities in respect of the hospital accommodation it controls and the medical staff which it employs Under the Local Government Act it took over a total of seventy-six hospitals and institutions These included twenty-eight general hospitals, the largest of which is Lambeth with accommodation for 1,300 patients eight of the others have accommodation for over 700 During the present year the remaining six public health institutions under the administration of the Council have been transferred from

public assistance establishments and with the appropriation of these institutions the Council has completed its task first entered upon in 1929 of removing its hospital service from the ambit of the Poor Law Each of these six institutions adjoins a hospital of the same name and in five of the six cases the medical superintendents of the attached hospitals receive an additional allowance as medical and administrative heads of the institutions

The total cost of maintenance of the various hospital services of the L C C is some four and a half millions a year of which nearly three millions is spent on the general hospitals The total bed accommodation in the hospitals and allocated institutions on transfer was 41 164 but this included nearly 10 000 beds in institutions the majority of which could not be regarded as suitable for the proper treatment of sick persons A great deal of structural work and readaptation was put in hand with the result that a net increase of more than 1 400 beds has been provided

There were admitted to these hospitals a large number of acute cases, both medical and surgical but there is of course this difference between them and the voluntary hospitals that the latter can select their patients and reject whom they please whereas the rate supported institutions must be prepared to admit any sick poor person who applies provided that in the opinion of the medical superintendent such a patient is suitable for admission The chronic sick poor are gradually being concentrated in twelve other institutions which unlike the rest are for the present, for administrative reasons not under the Public Health Acts

So far as maternity and child welfare services are concerned the City Corporation and the Metropolitan Borough Councils are the responsible authorities but the London County Council has maternity beds in its general hospitals, and in several hospitals a fully equipped maternity and gynaecological block One third of the births in London take place in Council hospitals The accessory medical services under the Council are also important these include pathological laboratories, x ray units and a large ambulance organization In addition to smaller units the Council has five pathological laboratories each of which serves a group of institutions attached to the municipal service These five are at Lambeth Highgate, Lewisham Mile End, and Kensington Arrangements have been made whereby postgraduate students of the London School of Hygiene and Tropical Medicine may obtain experience of the technical and administrative methods adopted in these laboratories—experience of a kind very difficult to obtain in the ordinary way

The story of the London hospitals is repeated in some of the large hospitals over the metropolitan border The North Middlesex County Hospital at Edmonton for example which was appropriated as a public health hospital in 1936 admits over forty patients every day a larger number than in any other hospital, voluntary or municipal, in the metropolitan area Three-fourths of the cases are acute a good index of this being the 6 000 operations a year It has a whole time medical staff of seventeen and a visiting medical staff of twelve

Provincial Hospitals

The same general provisions hold good in various degrees of other progressive cities The *Hospitals Year Book* 1938, gives particulars of about seventy general and children s hospitals in provincial cities administered by the local authorities The average bed accommodation in these hospitals is over 600 the whole time medical staff numbers 400 and the part time staff about 500 Birmingham has under its council four general hospitals two infectious diseases hospitals two maternity homes two babies hospitals four convalescent homes, and four sanatoria with nearly one hundred medical staff, whole- or part time Newcastle upon-Tyne has a hospital accommodating 750 with a staff of twenty five Hospitals remaining under the Poor Law have also their whole and part time staff Smithdown Road Liverpool with 1 200 beds has ten whole time and eleven part time officers

In Manchester a great scheme of reorganization of the consultant medical and surgical services has been brought about at the three general hospitals controlled by the city council—namely Crumpsall (1 438 beds) Withington (1 179) Booth Hall (760) The first two are general hospitals for adults and the third a general hospital for children All three were formerly Poor Law establishments Under the new arrangements which have been made in order to overcome the previous inadequacy of specialists in number and in the number of their visits there are or are to be forty one consultant appointments with a total of ninety five attendances per week The new salary bill will be £12 500 per annum representing about 50s per specialist s attendance Under the joint hospital advisory board for Manchester already mentioned it is hoped to co-ordinate the activities of all the hospitals, voluntary and municipal

Facilities for Instruction

A great amount and variety of clinical material is contained in these hospitals and many of them are used for undergraduate and postgraduate teaching In London some useful discussion has taken place between the London County Council and the representati es of the voluntary hospitals At several of the general hospitals under the old board of guardians arrangements for instruction were made, but these have been much extended since the hospitals came under Council control Teaching in obstetrics is afforded in seven of the Council s hospitals Facilities are also afforded at the Council s pathological laboratories to postgraduate students in order that they may obtain experience in technical and administrative methods As an example of the amount of material which may be afforded by a Council hospital St James s Wandsworth may be cited, where there is a clinic of fifty beds always occupied with serious fracture cases Eight of the hospitals have psychiatric out patient clinics In a number of the general hospitals units have been established for branches of medical and surgical work of such specialized nature that it is not economical or convenient to provide it at every hospital Out patient treatment is now given at twenty five hospitals

The postgraduate school at Hammersmith Hospital the result of a partnership between the Government the University of London and the London County Council was opened in May, 1935 A full account of its work will be found in the section on Postgraduate Study at p 926 The County Council has provided at Hammersmith a radiological department which serves as a consultative centre for the whole of the hospital service where cases can be sent from other hospitals for expert opinion on diagnosis and treatment Arrangements are made at this school for postgraduate courses for insurance practitioners The arrangements for 1938 are for over 800 doctors to take the course at this school and at provincial medical schools and next year it is hoped to make the number 2,000

It may be added that the clinical material in municipal hospitals is not only vast in amount but includes a great deal with which it is very important that the young practitioner should be familiar and which is not much represented in the teaching hospitals In a recent report to the L C C it is mentioned that the type of case treated in the general hospitals is altering and there is a continually increasing amount of acute and operative work to be carried out.

Medical Staffing

The policy pursued by the London County Council and other authorities is to provide a whole time medical service and to have a permanent staff at each general

hospital The grades of officers are medical superintendents, deputy medical superintendents, senior assistant medical officers, assistant medical officers, and house-physicians and surgeons (resident), and part-time clinical assistants (non resident)

The medical superintendent is required to be a man of high qualifications in at least one branch of medicine, as well as a good administrator and first class technician In addition to the medical superintendent one or more whole-time medical officers with special qualifications in medicine, surgery, or obstetrics, are appointed Preference is given to officers holding the higher medical qualifications, M R C P or M D in the case of physicians F R C S or M S in the case of surgeons These are graded as senior assistants and at the larger hospitals one of them ranks as deputy medical superintendent Deputy medical superintendents are employed as a rule only at hospitals with over 600 beds of which there are sixteen among the London County Council general hospitals These officers at institutions with over 750 beds are described as of Grade I while those at hospitals of from 600 to 750 beds are of Grade II Senior assistant medical officers are also graded according to the size of the hospital they serve The appointments to these posts are given to qualified medical practitioners of at least one year's standing in their profession who have held a residential post for at least six months in a general hospital Those who seek assistant medical officer ships at the special hospitals will find general hospital experience desirable although the lack of it does not debar otherwise suitable candidates The engagements of assistant medical officers of Grade I are limited to four years, terminable at any time by a month's notice on either side and the first year of service is on probation Should the officer's name be on the promotion list at the end of his four-years term, he may remain beyond the period of the original engagement and at an increased salary Assistant medical officers of Grade II are on a yearly engagement but this has been found unsatisfactory to the Council, because of the need for frequent appointments and because officers leave at a time when, having learnt the ways of the hospitals they are most useful It is proposed to renew such appointments for a second year The junior appointments are those of resident house-physicians and surgeons and part time clinical assistants These officers consist of recently qualified men and women who are appointed for limited periods generally six months, and need not have had previous hospital experience The six-months period may be extended for further similar periods up to a maximum of two years provided that not more than twelve months is spent in one hospital

Scale of Salaries

Medical superintendents in London receive as a maximum between £900 and £1 650 per annum including an unfurnished house or quarters valued at £100 a year for superannuation purposes and the rates on which are paid by the Council The salary scales are

General Hospitals	£900 to £1 550
Convalescent Hospitals	£900 to £1 100
Fever Hospitals	£900 to £1 450
Tuberculosis Institutions	£900 to £1 200
Children's Hospitals	£950 to £1 650

Of the general hospitals only two of the smallest in the London County Council area have a commencing salary of £900 at the other end of the scale two have commencing salaries of £1 300 One condition made is that the appointment is to the Council's hospital service not to an individual hospital and appointment to the service includes liability, if called upon to take part in consultations or perform operations at another hospital although if this happens frequently, on account of the special skill or experience of the officer concerned a claim for extra remuneration may be considered Further in addition to their ordinary remuneration as medical superintendents the chief medical officers of the infectious hospitals service and of the children's institutions and surgical tuberculosis service receive an allowance at the rate of £200 a year and the chief medical officer of the medical tuberculosis service who is also a medical superintendent of a hospital an additional allowance at the rate of £125

The scale of salaries for other officers subject to certain conditions in the different hospitals is as follows

Medical Appointments	Remuneration*		
	Minimum	Increase	Maximum
	£	£	£
Deputy medical superintendent (Grade I)	650	50	800
(Grade II)	600	30	750
Senior assistant medical officers (Grade I)	550	25	650
(Grade II)	500	25	600
Assistant medical officers	350	25	475
(yearly engagement)	250	—	—
House physicians and house surgeons	£120 (resident)		
Clinical assistants (non resident)	£150 (non resident) and no emoluments, but meals when on duty		

* Exclusive of the emoluments of board lodging and washing valued at £150 per annum in each case

In the country generally medical superintendents of Poor Law infirmaries are paid from £600 a year upwards to £1 600 with emoluments, deputy medical superintendents, from £450 to £750, with similar emoluments, and resident assistant medical officers from £200 to £450, with full board

Residence, Leave, and Pensions

Generally speaking all assistant medical officers in London are required to be resident If in any case the question of an assistant medical officer being non resident should arise the primary consideration is the interests of the service Lately the London County Council in order to enable male members of its senior staff to marry and remain in the Council's service has made alternative scales of salary for staff provided only with unfurnished quarters as distinct from board lodging, and laundry The scales are deputy medical superintendents Grade I, £700—£50—£850 a year, Grade II £650—£30—£800, senior assistant medical officers Grade I £600—£25—£700 Grade II, £550—£25—£650 Non resident medical officers who are receiving the allowances in lieu of residential emoluments pay for any meals taken at the hospital Permission to live out is granted only if the accommodation is required or can be utilized for some other purpose

Two years ago in consequence of difficulties in recruiting a suitable medical staff for the positions of assistant medical officer (£350—£25—£425) for hospitals for infectious diseases the Council decided that where necessary these positions should be filled by the second class of assistant medical officers (£250), on the understanding that after not less than six months they should be transferred to the higher grade Even this has not brought in a sufficient supply and it is now proposed to seek candidates from those who in January of each year, complete Part I of the course for the D P H These men would have been qualified for at least a year and held residential posts This new grade of "junior assistant medical officers special hospitals service," will have a salary of £150 a year with residential emoluments and during their twelve months service will be helped in their public health career and able to prepare for Part II of the D P H

Liberal annual leave, with pay, and sick leave, with pay for a reasonable period are allowed by the L C C Leave is also granted for study purposes, not only to officers who are following a university course but to those who are undertaking other courses of study or research work The house physicians and surgeons are not regarded as employed in a whole time capacity and reasonable off duty periods for study are allowed Clinical assistants attend six sessions of four hours' duration each week Assistant medical officers also are allowed to improve their qualifications, and leave of absence not exceeding six weeks in any one year may be granted with rates of pay varying in accordance with the service of the officer Occasional daily leave for attending a course of instruction for a medical degree or diploma is granted with full pay These concessions however are subject to the condition that the officer shall continue for a certain period in the service of the Council

Whole time permanent appointments are pensionable under the Council's superannuation and provident scheme which provides for a pension and lump sum payment after the necessary qualifying period of service Pensions are also payable to officers on the fund who break down in health after not less than ten years' service Officers resigning have their contributions returned to them and death benefits are also paid in respect of officers of five years service or more Marriage is no longer a bar to the employment of full women doctors by the Council, but a difficulty arises

resident appointments owing to lack of married quarters and therefore all women members of the hospital medical staff including the mental hospital service are excluded from the scope of the concession with the exception of part time consultants and specialists

Consultant and Specialist Services

Under the new scheme, which came into operation in 1933 the general hospitals have been divided into seven groups on a geographical basis and the special hospitals and public assistance institutions in the area linked up with them, so that consultants and specialists who were previously engaged chiefly for individual hospitals whether at annual salaries or at a fixed charge for visits are now appointed to the service and utilized as required for the groups of hospitals The salaries for the part time consultants and specialists are generally £125 a year for one session a week and £75 a year for each additional session, a session to be approximately of 2½ hours duration Full time consulting physicians and surgeons receive £1 200 a year, rising by increments of £50 to £1,500 a year with no emoluments The full time radiologists receive £900 a year, rising by increments of £50 to £1,100 Consulting urologists are paid on a visit basis—two and a half guineas per visit The appointment of part time consultants and specialists is subject to annual review The experiment of engaging part time obstetricians and gynaecologists for duty at selected hospitals has proved satisfactory and the scheme has been extended to eight of the hospitals

Method of Entrance to the Service

Many provincial areas have now highly developed schemes providing for the employment of many medical men and women of high qualifications at salaries of from £450 to £800 per annum, and in addition large numbers of junior officers at salaries of from £200 upwards are employed These posts offer to all grades remarkable facilities, which should appeal to those who desire to gain experience and at the same time wish to adopt for a period the institutional life It is a service in which the original appointment and any subsequent promotion depend upon merit and in which vacancies in the higher grades are filled so far as possible from the existing staff with no barrier preventing transference from one grade to a higher Vacancies are usually advertised in the medical journals

The opportunities of the Local Government Hospital Service to those whose career will be spent in general or consultant practice as well as to those who expect to spend their lives in the public health service scarcely need to be stressed One point which the final year student or the newly qualified practitioner will do well to bear in mind is that some authorities in offering appointments insist upon candidates possessing previous resident hospital experience Such a requirement may not arise for some years but the medical man or woman who has gone direct to serve as locumtenent or assistant may find himself or herself cut off from certain avenues of work through having neglected to take resident experience immediately after qualification We are informed that it is almost the rule for the young medical woman to take a residential post, but the young medical man often forgoes this experience It is certainly deplorable that a competent man should through ignorance on qualification, deprive himself of the opportunity of following his bent in later years

It has to be borne in mind, however that the attractiveness and opportunity of a post under the new public assistance authorities notwithstanding the effect of the Act of 1929 in assimilating the Poor Law to other public health services, are affected not a little by the policy adopted by the local authority concerned In the more progressive areas there is a high degree of differentiation in treatment between the sick and mentally afflicted on the one hand and the purely pauper class on the other—that is to say between the hospital and the public assistance institution formerly called the workhouse The tendency in such areas has been to develop the hospital services on lines approximating to those obtaining in the voluntary hospitals

In addition to the hospital appointments of the character mentioned, the Local Government Service offers numerous other (part time) posts such as those of public assistance medical officer and public vaccinator, which are commonly held by private practitioners Domiciliary work in the public assistance medical service has been found as the result of a recent inquiry, to be in many areas very inadequately recompensed and in localities where unemployment is rife and increasing numbers of people are resorting to public assistance the work is becoming more onerous An assurance has been given by the Ministry of Health that where such increase of work is definitely proven the local authority will be encouraged by the Ministry to listen to the plea for an increase of remuneration

Enough has been said to show what variety of medical service whole time and part time institutional and domiciliary, the Local Government Service offers on the one hand to the ambitious who desire experience and, on the other hand to those who seek a secure position, with superannuation at the end

PRISON MEDICAL SERVICE

Appointments to the prison medical staff are made by the Secretary of State for Home Affairs on the recommendation of the Prison Commissioners Application for such appointments should be made on a special form which can be obtained from the Secretary (Staff Branch) Prison Commission Home Office London S W 1

In the smaller prisons the post is usually a part time one held by a local practitioner but in the larger prisons the members of the medical staff are required to devote their whole time to the service In the case of those required to give their whole time to the service the appointments are in the first instance as medical officers Class II and from the seniors of this rank the medical officers Class I are selected as vacancies occur

Largely as a result of action taken by the British Medical Association the salaries and conditions of prison medical officers have been improved, and now are Medical Officer Class II £525 rising by annual increments of £25 to £800 (with an allowance of £50 p a within the scale to holders of the diploma of psychological medicine) medical officer Class I £800, rising by annual increments of £30 to £1,000 Unfurnished quarters are provided, or an allowance in lieu is made

There are seventeen medical officers Class II twelve medical officers Class I and twenty seven part time medical officers The service is a small one and therefore vacancies are comparatively rare and the rate of promotion varies The work offers exceptional opportunities for research in criminal psychology, forensic psychiatry and mental deficiency

Medical Practice Over-seas

The following section of the Educational Number includes the articles that formerly appeared under the headings Medical Practice in British Dominions and Foreign Countries 'The Colonial Medical Service' and Medical Missionaries The section on Women in Medicine,' which includes articles on openings abroad and on the Women's Medical Service for India will be found at page 523

REGISTRATION

British Dominions and Foreign Countries

Medical Acts have now been passed in almost all places forming part of the British Empire beyond the seas, and registers of duly qualified practitioners are consequently maintained To these registers medical men educated in the United Kingdom are generally admissible merely on payment of a registration fee, provided they produce evidence that they are of good repute and are either registered or eligible for registration in the United Kingdom, as the local requirement may be The only exception to this statement that need be made relates to the Dominion of Canada Each of its provinces acts in medical matters as an independent State The result has been that reciprocity of practice has in the past been established between this country and each of the provinces of Canada except British Columbia, where certain obstacles were never overcome It has, however, to be recorded that reciprocity no longer exists with Saskatchewan, New Brunswick, Ontario, and Quebec We would advise any medical man proposing to practise in Canada first to communicate with the Provincial Registrar, stating what degrees or diplomas he holds, and asking for information as to the precise steps he must take in order to obtain admission to the Provincial Register The Licence of the Dominion Council, which can only be obtained after examination, entitles its holder to registration in any of the provinces of Canada, though in regard to Quebec there is a proviso that he must have been registered in the province five years prior to the application for the recognition of the Dominion Licence In order to sit for the examination for the Dominion Licence it is necessary to obtain either a licence from one of the provinces (this can be obtained from one of those with whom reciprocity has been established), or a certificate from a Provincial Council that the requirements of that Council in regard to preliminary education, matriculation, medical curriculum, and graduation have been complied with

Italy and Japan are the only two foreign States with which medical reciprocity has been established, though there are other countries which grant a limited recognition to British qualifications Generally speaking, in Continental countries (with the exception of the kingdom of Italy) a British medical man desiring to exercise his profession therein must pass practically the same examinations as those imposed on natives of the country In France naturalization is now required also The same observation applies to all foreign States in the South American continent Each of the United States of North America has its own laws and regulations governing medical practice, and all of them require the holder of a British qualification to submit to an examination A number of the States, including New York, Illinois, Michigan, and Indiana, require naturalization

The Chinese National Health Administration has issued a notice, for guidance of foreign medical practitioners, to the effect that they should obtain licences to practise from the Administration, and their bona fides must be guaranteed by their consular authorities, they should learn Chinese, and should apply to the Permanent Chinese Delegation of the League of Nations at Geneva before setting out for China

COLONIAL MEDICAL SERVICE

A large number of medical appointments in the Colonies and Dependencies administered under the direction of the Secretary of State for the Colonies form a single Colonial Medical Service These scheduled appointments are in

(*a*) *Tropical Africa* comprising on the east side Kenya Nyasaland the Tanganyika Territory Uganda Somaliland Zanzibar and Northern Rhodesia on the west side Nigeria the Gold Coast Sierra Leone and the Gambia

(*b*) *Eastern Colonies and Protectorates* Ceylon Hong Kong, the Straits Settlements, and the Malay States

(*c*) *West Indian Colonies* Jamaica Bahamas Barbados Bermuda Windward Islands Leeward Islands, Trinidad, with British Guiana and British Honduras

(*d*) *Western Pacific* Fiji Gilbert and Ellice Islands Colony and the British Solomon Islands Protectorate

(*e*) *Mediterranean* Malta, Cyprus, and Gibraltar

(*f*) *Middle East* Palestine

(*g*) *Various Islands* Mauritius Seychelles, Falkland Islands, and St Helena

The Colonial Government Medical Departments employ about 700 European medical officers, including about thirty women They also employ a large number of qualified Asiatic and African medical officers, who are appointed locally, trained nursing sisters and health visitors, most of whom are European, and large numbers of subordinate personnel, sanitary inspectors, medical assistants, and dressers, most of whom are natives of the areas in which they serve

An officer of the Colonial Medical Service has opportunities for the practice of his profession in general medicine and surgery as well as in the special branch of tropical medicine On joining a Medical Department his duties include medical, surgical, and public health work He may be posted to an outlying or bush station, where he will be responsible for all the medical activities in connexion therewith, or he may be attached for duty in one of the large hospitals Every encouragement will be given to him to pursue any specialist work in which he may be interested Great importance will be attached to a candidate's postgraduate experience, as in the outlying districts he will frequently be called upon to deal with emergencies without being able to seek the advice and assistance of his colleagues

Vacancies

Vacancies for medical officers may occur at any time of the year and are dealt with as circumstances require Fifty three vacancies were filled in 1936 and forty seven in 1937 In normal circumstances vacancies occur most frequently in tropical Africa and Malaya In the West Indian Colonies Ceylon, and Mauritius the junior posts are practically always filled by the appointment of qualified local candidates, in Malta all posts are so filled The vacancies for which candidates are selected from outside the Service are generally those for ordinary medical officers Appointments for specialists are almost invariably reserved for officers who are already in the Service and who have shown outstanding merit in a particular branch of medicine or surgery

Under normal conditions a few vacancies may be expected annually, usually in West Africa and Malaya for lady medical officers

Qualifications and Training

Candidates must be fully qualified and British subjects under 35 years of age preference is given to candidates who are under 30 and to those who have held hospital or public health appointments, or who have special knowledge of anaesthetics radiology, surgery medicine, ophthalmology gynaecology and midwifery, diseases of the ear, nose and throat, venereal diseases etc In the case of lady medical officers experience in maternity and child welfare work is almost invariably essential

Selected candidates are normally required to undergo a course of instruction in tropical medicine and hygiene at the London School of Hygiene and Tropical Medicine the Liverpool School of Tropical Medicine or Edinburgh University before taking up their appointments The cost of tuition and the diploma examination fees if the candidate is successful, are paid by the Government, together with an allowance of £25 a month during the period of instruction If an officer has not taken a course of instruction in tropical medicine prior to appointment he is usually required to take one during his first leave of absence and to obtain a satisfactory certificate before he can be confirmed in his appointment

Emoluments

When considering the scales of salary offered in the Colonial Medical Services candidates are particularly advised to study the information provided relating to general conditions of service. It will often be found that the actual value of an appointment is considerably greater than is indicated by the salary alone. For example all scheduled appointments are pensionable in most Dependencies free quarters (or allowances in lieu) are provided and in almost all free medical attendance. The cost of passages from the United Kingdom is normally paid on first appointment both for the officer and if he is married for his wife and family. Passages are also, generally speaking, provided at Government expense when an officer proceeds on leave for himself and his wife and a measure of assistance is given towards the cost of passages for his children. In those Colonies in which income tax is payable the rates are generally on a much lower level than income tax rates in the United Kingdom. At the same time the cost of living in the Dependency concerned should be taken into account in order to obtain a true comparison and it is suggested that candidates might usefully consult the handbook *Information as to the Conditions and Cost of Living in the Colonial Empire* which is published by the Stationery Office (price 3s. 6d.).

The following are some examples of present salaries:

Dependency	Appointment	Salary
East Africa	Medical or Health Officer	£600 p.a. for 2 years rising by £30 annually to £840 then by £40 annually to £1,000 subject to efficiency bar at £840
	Senior Medical Officer	Rising to £1,100
	Specialist appointments	Ranging from £1,000 to £1,150
Kenya, Uganda, Tanganyika	Director of Medical Services	£1,600
	Deputy Director of Medical Services	£1,200
Nyasaland, Zanzibar, Northern Rhodesia	Director of Medical Services	£1,300
West Africa	Medical Officer	£660 p.a. for 3 years £690 p.a. rising by £30 annually to £840 then by £40 annually to £1,000 subject to efficiency bar at £840
Nigeria	Director of Medical Services	£2,000
	Deputy Director of Medical Services and Deputy Director of Health Services	£1,700
Gold Coast	Director of Medical Services	£1,800
	Deputy Director of Medical Services and Deputy Director of Health Services	£1,600
Sierra Leone, Gambia	Director of Medical Services	£1,600
	Senior Medical Officer	£1,200 plus £1,000 staff pay
Malaya	Medical Officer	£700 p.a. rising to £770 during first 3 years then £805 rising by £35 annually to £1,120 with efficiency bar at £840
	Director of Medical Services (Straits Settlements)	£1,800
	Deputy Director of Medical Services (Straits Settlements)	£1,540
	Other special appointments	Ranging from £1,190 to £1,540
Hong Kong	Medical Officer	£760 p.a. for 2 years then £760 rising by £30 annually to £940 then £1,000 rising by £50 annually to £1,100 with efficiency bar at £940. After third year a non-pensionable residential allowance of £300 p.a. is payable
	Director of Medical Services	£1,600
	Deputy Director of Medical Services	£1,300
West Indies: Jamaica	Senior Medical Officer	£700–£800
	Medical Superintendent Lunatic Asylum	£750–£850
	Bacteriologist	£700–£900
	Assistant Director of Medical Services (Health)	£800–£1,000
	Director of Medical Services	£1,000–£1,200
Bahamas	Chief Medical Officer	£800
Barbados	Chief Medical Officer	£1,000
Bermuda	Director of Medical and Health Department	£1,600
Windward Islands	Senior Medical Officer Grenada	£700
	Senior Medical Officer St Lucia	£650
	Senior Medical Officer St Vincent	£700
West Indies (cont.)	Resident Medical Superintendent Antigua	£600
Leeward Islands	Senior Medical Officer St Kitts-Nevis	£600
	Chief Medical Officer Dominica	£700–£750
Trinidad	Senior Medical Officer	£700–£900
	Government Bacteriologist, Medical Superintendent, Mental Hospital, Senior [illegible]	£1,000 each
	Deputy Director of Medical Services	£1,100 each
	Director of Medical Services	£1,300
British Guiana	Bacteriologist	£800
	Medical Superintendent Mental Hospital	£1,000
	Resident Surgeon	£1,100
	Director of Medical Services	£1,400
British Honduras	Medical Officer	£600 p.a. rising by £35 annually to £850
	Senior Medical Officer	£1,000

Salaries of superscale posts are at present under revision.

† In addition to salary non-pensionable children's allowances are payable under certain conditions at rates from $30 to $70 a month for the first child and $20 to $50 a month for the second child.

General Conditions of Service

PROBATION

Officers are normally appointed to the Colonial Medical Service on probation in the first instance usually for two or three years and officers whose service has been satisfactory during this period are confirmed in their appointments.

ACTING AND OTHER ALLOWANCES

An officer appointed to act in a higher post in the absence of the substantive holder of that post is usually granted an allowance in recognition of the additional responsibilities which he thereby assumes. Travelling and transport allowances are granted under the regulations of each dependency to officers who are required to travel on duty and generous provision is made to assist by means of advances officers who wish to purchase motor cars which will be of use to them in the performance of their duties.

QUARTERS

In East and West Africa and in certain other appointments free quarters with heavy furniture are provided or allowances are paid in lieu. In Ceylon and Malaya Government quarters for which officers are required to pay rent are normally provided. In the smaller Dependencies Government quarters are not usually available.

PRIVATE PRACTICE

No officer of the Colonial Medical Service is entitled as of right to private practice the Service being envisaged as essentially a Service of whole time officials whose primary duty is to the State. The conditions if any under which officers are permitted to engage in private or consulting practice and to receive fees from members of the public are determined by local regulations framed in accordance with the circumstances of the various Dependencies and approved by the Secretary of State.

PROMOTION AND TRANSFER

Senior appointments are usually filled by promotion and officers are considered by the Secretary of State for any vacancy for which they may be suitable and qualified whether the vacancy arises in the particular Dependency in which they may be serving at the time or elsewhere. An officer of the Colonial Medical Service may be transferred at the discretion of the Secretary of State to any post which in the Secretary of State's opinion is not of less value (due regard being had to climate and other circumstances) than that which he already holds.

LEAVE

Officers are as a general rule eligible for vacation leave with full salary together with leave for the normal period occupied

by the voyages between the Dependency and the United Kingdom after a tour of resident service which within specified limits is at the discretion of the Governor Leave is in most cases calculated on the basis of a fixed number of days in respect of each completed month of resident service In addition to vacation leave provision is made for sick leave which is usually granted with full salary up to a maximum of six months and if necessary with half salary for a further period of six months

PASSAGES

On First Appointment—Free passages from the United Kingdom on first appointment are usually granted for officers and if they are married for their wives and children provided that the permission of the Government is obtained if required for the officer's wife and family to proceed to the Dependency concerned but the maximum number of passages paid for from public funds is limited to five There are however variations from this practice in certain Dependencies

On Leave—Free passages for officers and for their wives are normally granted once each way in respect of each tour but there are certain exceptions to this practice In all Dependencies except the West Indian Colonies Seychelles and West Africa assistance can under varying conditions be obtained towards the cost of passages for children

PENSIONS OF COLONIAL MEDICAL SERVICE

Pensions are granted under local laws the provisions of which vary in detail The minimum period of service necessary to qualify for a pension is ten years If an officer retires after less than ten years service a gratuity may be granted The normal rate of pension is 1/600 of the final pensionable emoluments for each completed month of service, but there are certain variations from this rule—for example, in the West Indian Islands where the fraction is 1/720 and in Malaya where the pension is calculated at 180/720 of the final pensionable emoluments for the first ten years of service plus 1/720 for each completed additional month

In some Dependencies an officer may elect within a specified period to be paid on retirement a reduced pension equal to three-quarters of the full pension he has earned, together with a gratuity equal to ten times the amount of the reduction In some other Colonies—for example in West Africa—this form of award is compulsory while in the case of the Bahamas Barbados Bermuda Ceylon and Jamaica there is no provision for the payment of a gratuity in lieu of a proportion of the pension The normal retiring age is 55 except in the Bahamas Barbados Bermuda and Jamaica where it is 60 But officers may in most Colonies be called upon to retire with the approval of the Secretary of State or may elect to retire voluntarily at the age of 50

The arrangements for the grant of pensions provide generally speaking for the award to officers who are transferred from one Dependency to another in the course of their Colonial service of total pensions or approximately the same amount as would have been awarded if all their service had been in their last Dependency and if they had drawn their final pensionable emoluments throughout their service

A medical officer serving in East Africa (except Northern Rhodesia) or West Africa is at the end of nine years service (of which not less than six years have been residential), permitted if his service and conduct have been satisfactory to retire with a gratuity of £1 000 or at the end of twelve years service (of which not less than eight years have been residential) with a gratuity of £1 250 All claims to pension are forfeited on the receipt of such a gratuity

WIDOWS AND ORPHANS PENSIONS

In many Dependencies officers whether married or not are required to contribute to local schemes which provide for the payment of pensions to widows and orphans Contributions vary but are generally 4 per cent of salary The schemes are subsidized by the Colonial Governments concerned and the pensions are based upon actuarial tables

SOURCES OF INFORMATION

Further information as to the staffs the climate and local conditions will be found in the Dominions Office and Colonial Office List which may be consulted in most public libraries Leaflets concerning nearly all the tropical dependencies are issued for the use of intending settlers and others by the Oversea Settlement Department Caxton House Tothill Street London S W 1 Information about general conditions in Malaya is obtainable from the Malayan Information Agency 57 Trafalgar Square London W C 2

Applications for appointment to the Colonial Medical Service should be addressed to the Director of Recruitment (Colonial Service) Colonial Office 8 Buckingham Gate London S W 1, who will furnish without charge a memorandum containing full information regarding the Service

SOUTHERN RHODESIA MEDICAL SERVICE

The Government of Southern Rhodesia maintains a medical and public health service which at present consists of eleven full-time appointments, twenty five Government medical officers (nineteen in Grade II and six in Grade I) who, in addition to their Government duties supply in whole or in part the general practitioner service in all areas except the two larger towns, and thirteen medical officers who receive subsidies of from £250 to £360 a year Most of the latter class of medical officers are mine medical officers or medical missionaries who undertake light Government duties

On appointment Government medical officers are posted to Grade II the salary scale for which is £600 rising by increments of £25 to £750 per annum Promotion is made as vacancies occur to Grade I, with a salary of £750 rising by increments of £25 to £900 Government medical officers are allowed private practice unless they are posted to Salisbury or Bulawayo, when they receive an allowance instead The Government duties include supervision of the local Government hospitals, visitation and supervision of native clinics in the district medico legal duties and the medical supervision of jails police camps and Government stations The category of full-time officers includes appointments ranging from Assistant Medical Officer in the mental hospital with a commencing salary of £600 plus £130 in lieu of private practice to the Medical Director and the Chief Health Officer with salaries of £1,750 each Leave is granted at the rate of one-eighth of service and may be accumulated to six months full pay leave at one time Study leave for special purposes may also be granted The retiring age is 60 years, and there is a pension scheme

Appointments are made in Great Britain by the High Commissioner for Southern Rhodesia Rhodesia House 429 Strand, London, W C 2, who will supply further details on request

SUDAN MEDICAL SERVICE

The Sudan Medical Service is responsible for carrying out civil medical work and public health duties in the Sudan, and for the health of the Sudan Defence Force

The staff consists of a director three assistant directors (Hygiene and Public Health Hospitals, Laboratory Services) a senior physician and a senior surgeon to the Khartum Civil Hospital, a Government gynaecologist and obstetrician and a Government ophthalmologist a medical officer of health Khartum Province, and a number of British senior medical inspectors and "medical inspectors" whose pay commences at £720 and rises, subject to the recommendation of the director by five biennial increases to £1,080 and after thirteen years service to £1,200 The senior medical inspectors are eligible by selection for the senior posts All medical inspectors are appointed in the first place on probation for two years and if at the end of that time they are accepted for permanent service under the Sudan Government the first increase of pay is subject to their passing an examination in Arabic

In addition to this staff the Service includes Sudanese medical officers who have been trained at the school of medicine at Khartum, and Sudanese assistant medical officers who have been given a purely practical training in one of the larger hospitals in the Sudan

Among the attractions of the Service are the variety of work met with among the many different races in the Sudan, leave of ninety days generally granted every year after the first eighteen months of service, and special leave, which may be given for some definite purpose The terms of the Pension and Provident Fund are detailed in a pamphlet Information for Candidates of the Sudan Medical Service Private practice is allowed, but is limited to a

of the larger towns and may be carried on so long as it does not interfere in any way with official duties These duties include acting as consultant to the principal hospitals and the supervision of medical and public health work the inspection of schools the examination of candidates for Government service and pension and the training of assistant medical officers and Sudanese sanitary officers and overseers The Khartum medical school is staffed mainly by members of the Sudan Medical Service who receive additional remuneration for their work as teachers A registrar of the medical school who receives £250 a year extra pay is also selected from the Service

Inquiries for further information should be made to the Deans of the principal medical schools and to Dr H C Squires C M G 93 Harley Street London W 1

COMMERCIAL APPOINTMENTS OVER-SEAS

Many mining and oil companies plantations and other commercial undertakings employ medical officers overseas The conditions of service vary greatly some of the appointments are permanent while others are for a short term of years

Medical practitioners who contemplate accepting posts of this nature should scrutinize carefully the form of agreement which they are asked to sign in order that they may know exactly their terms and conditions of service For their guidance the Association has prepared a model form of agreement and an explanatory memorandum which may be obtained on application to the Secretary

MEDICAL MISSIONARIES

Missionary societies are in constant need of qualified men and women to fill vacancies as they occur in their hospitals and also to enable them to take advantage of fresh openings To those suitably endowed the mission field offers unique opportunities for interesting work and the development of native medical schools as training institutions in connexion with some of the larger mission hospitals affords excellent scope for valuable work to medical men and women who are qualified to teach It is not usually expected that medical missionaries should take a position such as would otherwise be occupied by an ordained clergyman or minister but it is essential that they should be prepared to exert their influence in any hospital to which they may be sent so that a Christian atmosphere may be maintained and the work of evangelization be carried on through the ministry of healing

As for scientific and other qualifications for the work medical missionaries, in addition to being physically capable of sustaining a life which makes a great demand upon their strength, should be thoroughly well trained physicians and surgeons It is very desirable that they should have held a resident appointment at a general hospital and have a good knowledge of practical surgery gynaecology tropical medicine and the treatment of eye diseases Useful information can be obtained from the Secretaries of the various Missionary Societies or from Wm C Bentall, O B E F R C S Ed Honorary Secretary Medical Advisory Board on Medical Missions to the Conference of Missionary Societies in Great Britain and Ireland, Rhosilli, Best Beech Hill Wadhurst Sussex or Edinburgh House, 2 Eaton Gate, London, S W 1

SPECIAL DIPLOMAS

Information about the regulations for the various Diplomas in Tropical Medicine in Psychological Medicine and in Public Health is given in the appropriate sections of this Educational Number at pages 530–3 and 536 Further details in regard to the D P H and the D T M will be found in the late Sir Andrew Balfour's *Guide to the Regulations Courses and Examinations for Qualifications in Public Health and Tropical Medicine* published by the British Medical Association, Tavistock Square W C 1 at the price of 3s

It should perhaps be noted here that of the various diplomas in special subjects granted by licensing bodies only those in Public Health and Sanitary Science and State Medicine are at present admissible for entry in the official *Medical Register* though other special diplomas may of course, be included among the particulars of qualifications set out in the *Medical Directory*

As stated at page 498 a Diploma in Tuberculous Diseases is granted by the University of Wales to qualified medical practitioners new regulations for this diploma are now in force

Diplomas in Medical Radiology

Diplomas in Medical Radiology are granted by the Universities of Cambridge Edinburgh Liverpool, and London Cambridge however will discontinue the granting of this diploma after 1941

The Cambridge Diploma—A Diploma in Medical Radiology and Electrology is granted by the University of Cambridge The primary object is to provide adequate training in a branch of medical work which is becoming increasingly important and difficult and which is outside the ordinary medical curriculum Before admission to any course for the diploma a candidate shall produce evidence that he holds a medical qualification approved by the committee and also satisfy the committee that he has had sufficient postgraduate clinical experience The next course which begins on October 4 1938 occupies nine months The first four months which can be spent either in Cambridge or in London are occupied with (*a*) lectures and practical work in physics in preparation for the examination for Part I in February (*b*) an introductory course of clinical instruction in radiology and electrology (*c*) a course of instruction in pathology in relation to radiology and electrology The next three months must be spent in London and are occupied with (*a*) lectures and demonstration in radiology and electrology (including radium therapy) at the British Institute of Radiology (*b*) clinical instruction in the radiological department of a hospital approved by the committee During the final two months of the course a candidate must hold a clinical clerkship or similar appointment in the radiological department of a hospital approved by the committee This part of the course may be done in London or elsewhere The examination for Part II will be held in July

Further particulars as to courses and examinations may be obtained from G Stead M A Secretary for the Diploma Cavendish Laboratory Cambridge or the General Secretary British Institute of Radiology 32 Welbeck Street W 1 Completed application forms must be sent to the Secretary for the Diploma at Cambridge by September 15

Cambridge University has decided to discontinue the granting of the Diploma after 1941 The last course will begin in October 1940

The Edinburgh Diploma—Candidates for the diploma must be graduates in medicine and surgery of the University of Edinburgh or hold corresponding degrees or qualifications registrable with the General Medical Council of Great Britain or of such other Universities or Medical Schools as may be recognized for the purpose by the University Court Candidates are not admitted to the examination for the diploma until after the lapse of not less than one year from obtaining a registrable qualification The course of study begins in October and extends over a period of not less than three terms The examination which is written oral and practical is in two parts (*a*) physics and (*b*) radiology The examination is held twice yearly Full particulars may be obtained from the Dean of the Faculty of Medicine In this connexion it may be noted that radiology can now be taken as the special subject in the examination for Membership of the Royal College of Physicians of Edinburgh Several candidates have already taken radiology as their special subject it means that an honours standard has to be attained

The University of Liverpool grants a Diploma in Medical Radiology and Electrology Candidates before admission to the examination for the diploma must possess a registrable qualification approved by the university in medicine and

surgery, and must have attended courses of instruction in (*a*) physics (two terms) (*b*) (i) radiology and (ii) electrology during the nine months in the x-ray and electrotherapeutic departments of a hospital or hospitals An examination is held in March and June in physics in June radiology and electrology Examination in either part may be taken separately Fees tuition £31 10s examination and diploma £6 6s An enrolment deposit fee of £5 5s is charged on application and credited to the fees but is not returnable in the event of the candidate failing to enrol These courses commence during the first week in October Application should be made to the Dean Faculty of Medicine the University of Liverpool

Conjoint Diploma in Medical Radiology (D M R R C P S) —The examination is divided into two parts the first comprising physics as applied to radiology the second medical radiology, with special reference to its clinical application including radiodiagnosis x-ray therapy and radium therapy Both parts will be held in January and July of each year Candidates may enter for them either together or separately subject to the production of the required certificates The course for the diploma extends over one academic year (nine months) of full-time study subsequent to the attainment of a recognized medical qualification At the discretion of the committee of management the conditions of admission may be modified in special cases but exemption will not be granted from any part of the examination A syllabus has been drawn up for Part I of the examination but not for Part II The fee for admission or readmission to each part is six guineas Copies of the regulations may be obtained from the secretary at the Examination Hall 8–11, Queen Square W C 1

The London Diploma—The University grants an Academic Postgraduate Diploma in Medical Radiology The course is open to registered medical practitioners and graduates in medicine of this or another approved university Students are required to attend a course of study approved by the University and extending over not less than one academic year at one or more of the Colleges or Schools of the University The subjects of the course are as follows Part I physics and electro technology Part II (*a*) radiography and radiodiagnosis (*b*) radiotherapy The examination for the Diploma consists of two parts Candidates may enter for Part I and Part II at the same examination or may enter for Part I only The examination will consist of a paper a practical examination and an oral examination in each of the subjects under Part I and Part II Full particulars may be obtained from the Academic Registrar the Senate House University of London W C 1

Diploma in Laryngology and Otology

The Conjoint Examining Board in England (Examination Hall Queen Square, London, W C 1) grants a Diploma in Laryngology and Otology (D L O) after an examination held in June and December

The examination comprises two parts Part I on the anatomy embryology and physiology of the ear nose pharynx, larynx trachea and bronchi and oesophagus Part II on the recognition and use of special instruments and appliances and the medicine surgery and pathology of these regions Candidates may enter for Part I at any time after a recognized qualification in medicine surgery and midwifery has been obtained Candidates may enter for Part II on completion of one year of special study of diseases of the ear nose pharynx, and larynx after a recognized qualification has been obtained provided that Part I has been previously passed and on production of certain certificates The conditions of study may be modified at the discretion of the Committee of Management in special cases The fee for admission or readmission to each part is six guineas

Diplomas in Ophthalmic Medicine

A special Diploma in Ophthalmic Medicine and Surgery is granted by the University of Oxford and by the Conjoint Examining Board in England

University of Oxford—The Diploma in Ophthalmology (D O) is granted to registered medical practitioners and to non registrable graduates of universities approved by the Board of the Faculty of Medicine after they have passed an examination which is held annually in June This examination is open to candidates who have attended a special two months course of instruction at Oxford and who have in addition done a ten months course of clinical ophthalmology at a recognized hospital or hospitals Entries for the course should be made through the Dean of the Medical School, University Museum Oxford, from whom any further information that is necessary may be obtained

The Conjoint Board—The Diploma in Ophthalmic Medicine and Surgery (D O M S) of the Conjoint Examining Board of the Royal College of Physicians of London and Royal College of Surgeons of England is issued after completion of an examination held in two parts—in February and July The examination is partly written, partly oral, partly clinical or practical Part I comprises anatomy and embryology of the visual apparatus, physiology of vision, elementary optics Part II comprises optical defects of the eye, ophthalmic medicine and surgery pathology with special reference to medical and surgical ophthalmology Candidates may enter for Part I at any time after a recognized qualification in medicine, surgery, and midwifery has been obtained Candidates may enter for Part II on completion of one year of special study of ophthalmology after a recognized qualification has been obtained provided that Part I has been previously passed, and on production of certain certificates The conditions of study may be modified at the discretion of the Committee of Management in special cases The fee for admission or readmission to each part is six guineas

Diplomas in Obstetrics

The Society of Apothecaries of London, as stated on page 500, confers a Mastery of Midwifery, and issues a diploma under this title denoting the possession of specialized knowledge of ante-natal care, midwifery, and infant welfare and the public health aspects of these subjects This is a postgraduate diploma, and is not registrable under the Medical Acts The same applies also to the new diploma D C O G, which the British College of Obstetricians and Gynaecologists now issues to registered medical practitioners who have had special postgraduate training and experience in the subject and have satisfied the examiners (See page 500)

Diploma in Child Health

The Conjoint Examining Board in England grants a Diploma in Child Health (D C H, R C P and S Eng), and copies of the regulations may be had from the Secretary, Examination Hall, Queen Square, W C 1

The examination will be held twice a year, in March and October, and will be written, clinical, and oral, fee six guineas It will comprise the following subjects special emphasis being laid on their preventive aspects (*a*) The anatomy, physiology and pathology in childhood (*b*) The development of the child physical and mental, including speech, with their disorders physical education in childhood (*c*) The hygiene and dietetics of infancy and childhood (*d*) Affections of the newborn (*e*) Disease in infancy and childhood medical and surgical (*f*) The therapeutics of infancy and childhood including remedial treatment physical and mental (*g*) Legislation and public administration in regard to the care of children including the methods of infant welfare centres and of the school medical service Certificates of experience in children's diseases at a recognized hospital are required

Diplomas in Anaesthetics

The Conjoint Examining Board in England grants a Diploma in Anaesthetics (D A, R C P and S Eng) copies of the regulations may be had from the Secretary Examination Hall, Queen Square, W C 1

The examination, to be held in May and November will be written and oral the latter part requiring the candidate to demonstrate his knowledge of the use of various types of anaesthetic apparatus The fee for examination is six guineas and the subjects are (*a*) Human anatomy and physiology considered in relation to anaesthesia (*b*) The history theory and practice of anaesthesia, including inhalation anaesthesia intravenous, rectal, and other methods of inducing

thesis local regional and spinal anaesthe ia in all varieties anae thesia in its relationship to disea e (c) Pre operative investigation preparation and medic ition the recognition of post operative complications and their treatment in so far as they are related to anaesthesia (d) The pharmacology and elementary chemistry of drugs u ed for or in association with anaesthesia Certificates of experience in the administration of anaesthetics in recognized hospitals are required though the conditions of study may be modified by the Committee of Management at its discretion

Tuberculous Diseases Diploma

Candidates may be admitted to examination for the Tuberculous Diseases Diploma of the University of Wales after the lapse of not less than two years from the date of obtaining a qualification in medicine surgery and midwifery, registrable in Great Britain, or in the Dominions, Colonies, and Dependencies of the British Empire

Every candidate must have held a resident post in a tuber culosis hospital or at an orthopaedic institution providing not less than 100 tuberculosis beds or shall satisfy the Faculty of Medicine that he has pursued a special study of tubercu losis equivalent to the above for a period of not less than twelve months The examination is in two parts Part I (*a*) written and (*b*) oral and practical, including the examina tion of patients and the recognition of specimens Part II is a written and practical examination on the epidemiology pathology, and bacteriology of tuberculosis Every candidate will be required to satisfy the examiners in both parts in the same examination The course of instruction commences in January and continues until May each year when the exam inations are held Further particulars may be obtained from the Secretary the Welsh National School of Medicine 10 The Parade Cardiff A limited number of appointments for part time assistant tuberculosis physicians are advertised annually in September by the Welsh National Memorial Association enabling suitably qualified and selected candidates to study for the diploma Particulars on application to the Secretary Welsh National Memorial Association Memorial Offices Westgate Street Cardiff

Diploma in Clinical Pathology

The University of London grants an Academic Post-graduate Diploma in Clinical Pathology

The course of study is open to graduates in medicine of this or another approved university or registered medical practi tioners whose training has in the opinion of the university qualified them for registration as students for the diploma They are required to pursue an approved course of instruction and training lasting at least one calendar year as whole time workers under the supervision of the head of the pathological department of one of the colleges or schools of the university The examination is held once a year in October Candidates must apply to the Academic Registrar for an entry form and a certificate of course of instruction to be returned duly filled in and attested together with the fee of ten guineas by September 1

Foreign Degrees for Practitioners

UNIVERSITY OF LAUSANNE

It has been possible for a long time to obtain the M D degree (not registrable in this country) from one of the State Universities in Switzerland—namely Berne Geneva and Lausanne In 1930 new regulations came into force in the Faculty of Medicine of the University of Lausanne the main effect of which is to provide a special M D examination for medical practitioners from other countries Particulars may be obtained from Dr C A H Franklyn honorary secretary Lausanne Medical Graduates 34 Queensway Wragby Road Lincoln (booklet and copy of regulations post free 2s 1½d)

ROYAL NEDERLANDS UNIVERSITIES

It is possible for a British practitioner to secure the M D degree in Holland Such degree does not *ipso facto* confer the right to practise in that country but is purely an academic distinction At Leyden (Leiden) for instance any medical practitioner who holds a university degree and is registered in his own country and legally entitled to practi e medicine may proceed to the academic degree of M D by sending in a thesis This thesis must be sent in to one of the university professors in the Faculty of Medicine accompanied by a letter to the Minister of State concerned supplicating for the doctorate A high standard is required and the candidate must be able to prove that the thesis is his own work and that the observations made and the conclusions drawn are his own Normally such a thesis would take from six to twelve months to prepare Residence in Holland would not appear to be required while doing the work Anyone inter ested may write to the Hon Secretary Lausanne Medical Graduates Association 34 Queensway Lincoln

Dental Surgery

Until the passing of the Dentists Act 1921, the profession of dentistry in this country was regulated by enactments corresponding very closely with those relating to the practice of medicine—that is to say, there was no direct prohibition of the act of practice and the Dentists Act of 1878 gave the same degree of protection to legally qualified and registered dentists as was accorded to regis tered medical practitioners—namely the reservation of the use of certain titles This Act provided also (1) that no person should take or use the name or title of dentist (either alone or in combination with any other word or words) or of dental practitioner or any other name, title or description expressed in words or by letters implying that he was specially qualified to practise dentistry unless he was registered under a penalty of £20 and (2) that an unregistered person could not recover any fee or charge in respect of any dental operation attend ance or advice But in the case of the practice of medi cine by unqualified and unregistered persons certain deterrent factors came into play—such as the inability to give a death certificate—which did not operate to the same extent in the case of dentistry hence unqualified practice was far more prevalent in dentistry than in medicine and increased after a decision of the House of Lords placing a narrow interpretation upon the words specially qualified to practise dentistry by defining the word qualified as not referring to competence but to the possession of a recognized diploma

Dentists Act, 1921

This unsatisfactory position was remedied by the passing into law of the Dentists Act 1921 its provisions are based largely on the recommendations of a departmen al committee appointed in 1917 by the Privy Council to investigate the extent and gravity of the evils connected with the practice of dentistry and dental surgery by persons not qualified under the Dentists Act Since November 30 1922 no person has been permitted by law to practise or hold himself out whether directly or by implication as practising or as being prepared to practise dentistry unless he is on the *Dentists Register* kept under the Dentists Act 1878 For the purposes of the Act the practice of dentistry includes the performance of any such operation and the giving of any such treatment advice or attendance as is usually performed or given by dentists and the performing of any operation or the giving of any treatment advice or attendance on or to any person as preparatory to or for the purpose of or in connexion with the fitting insertion or fixing of artificial teeth The maximum penalty incurred by an unregistered practitioner is £100 for each offence There are how ever certain important exceptions to the requirement of registration A registered medical practitioner may prac tise dentistry without being on the *Dentists Register*

though under the National Health Insurance (Dental Benefit) Regulations he cannot give dental treatment to insured persons as an additional benefit unless he is registered A registered pharmaceutical chemist or chemist and druggist may extract a tooth where the case is urgent and where no doctor or dentist is available, but the operation must be performed without any kind of anaesthetic and minor dental work may be performed in a public dental service under the personal supervision of a registered dentist provided that it is in accordance with conditions approved by the Minister of Health after consultation with the Dental Board

Dentistry may be carried on by a corporate body provided that the majority of the directors and all the operating staff are registered dentists and that no business other than dentistry or only some business ancillary to dentistry is carried on by the company Companies carrying on the business of dentistry at the present time are permitted to continue to do so with certain restrictions provided that the name of the company is well as the names of the directors have been entered in a list kept under the Act for that purpose Every director or manager of a company convicted of an offence under the Act will be held to be guilty of the offence unless he proves that the offence was committed without his knowledge and the court may in addition to a fine order that the name of any director convicted shall be removed from the list of directors aforesaid

The Dental Board

On the establishment of the Dental Board in 1921 certain powers and duties of the General Medical Council were transferred to it, including the duty of erasing from the *Dentists Register* any entry which has been incorrectly or fraudulently made An inquiry into the case of a person alleged to be liable to have his name erased from the *Register* is made by the Board, which reports its findings to the General Medical Council, the order directing the erasure being made by the Council A name erased from the *Register* can only be restored by the Council upon a report made by the Board An appeal to the High Court may be made by any person aggrieved either by refusal of the Board to register his name or by the removal of his name from the *Register* The administrative expenses of the Board are defrayed from the registration fees and annual retention fees, and the surplus may be allocated to purposes connected with dental education and research or to any public purposes connected with the profession of dentistry The offices of the Dental Board are at 44, Hallam Street, London, W 1

Dental Education and Examination

The preliminary examination in general education is the same for medical and dental students, and the early stages of their education embrace much the same subjects[1], and as the dental student is required to obtain a knowledge of the broad principles of medicine and surgery, it is necessary for him to pursue some portion of his studies at a medical school as well as at a special dental school the latter not undertaking the teaching of these subjects

Degrees and diplomas in dentistry are granted by the Universities of Belfast Birmingham Bristol Dublin Durham, Leeds Liverpool London Manchester St Andrews, Sheffield and the National University of Ireland as will be found stated in the articles on these universities Licences in dentistry entitling the holder to be registered on the Dentists Register are granted by the Royal Colleges of Surgeons of England of Edinburgh and in Ireland and by the Royal Faculty of Physicians and Surgeons of Glasgow

[1] See the particulars as to the admission of students to Schools of Medicine printed in the article on the General Medical Council at page 483

Recognized dental schools are numerous In London there are those connected with the Royal Dental Hospital, Leicester Square, the National Dental Hospital (now the University College Hospital Dental School), Great Portland Street Guy's Hospital King's College Hospital, and the London Hospital In the provinces there are the Birmingham Dental Hospital, the Royal Infirmary and the General Hospital, Bristol the Dental Hospital and the Public Dispensary, Leeds, the Dental Hospital, Liverpool, the Dental Hospital Manchester, the Sutherland School, Newcastle on Tyne the Royal Hospital, Sheffield In Scotland there are the Dental Hospital Dundee, the Incorporated Dental Hospital and School, Edinburgh, and the Incorporated Dental Hospital, Glasgow, and in Ireland the Belfast Dental School the Incorporated Dental Hospital of Ireland Dublin, and the Royal College of Surgeons in Ireland, Dublin

General Medical Council's Recommendations

The Dentists Act still leaves to the General Medical Council the duty of controlling the course of study and examinations required for dental qualifications

ADMISSION OF DENTAL STUDENTS TO SCHOOLS OF DENTISTRY

Any application to be registered, on or after September 1 1938 as a dental student should be addressed to the dean or other appropriate authority of the school of dentistry to which the applicant desires to be admitted Students will no longer, as heretofore, be registered by the General Medical Council on their admission to schools, and it will rest with the authorities of schools and of licensing bodies to deal at their discretion without further reference to the Council with applications for registration On and after November 1 1938—that is to say, after the beginning of the first term of the academical year 1938-9—applications will be considered by the authorities of dental schools and of licensing bodies in the light of the recommendations of the Council in regard to the Registration of Dental Students, incorporating Resolutions in regard to General Education and Preliminary Scientific subjects, which come into operation on November 1, 1938 and supersede the Regulations of the Council in regard to the Registration of Dental Students (last revised in June 1934) and of the Recommendations of the Council as to the Course of Study and Examinations to be required of Candidates for Licences in Dentistry or Dental Surgery, which came into operation on October 2, 1933 and were amended by the Council on May 24, 1938, so as to bring them into harmony with the Recommendations in regard to the registration of students

The relevant provisions of the revised Recommendations as to the course of study and examinations to be required of candidates for qualifications in dentistry are as follows

1 That, subject to such exceptions as may from time to time be allowed by the authorities of Schools of Dentistry and of Licensing Bodies, every dental student at the commencement of his studentship should be registered in the same manner as a medical student, and under the same conditions with respect to age, preliminary examination in general education and additional examination or examinations, provided that it should be open to applicants for registration as dental students to commence professional study either at a recognized dental hospital or school or as pupils of a registered dental practitioner

2 That, with respect to applicants who have served an apprenticeship in dental mechanics, an applicant who has served two or more years subsequent to his attaining the age of 17 as a bona fide apprentice in dental mechanics with a registered dental practitioner should, if the licensing bodies think fit be allowed to antedate his registration for a period not exceeding six months

3 That before registration as a dental student every applicant should furnish evidence that he has attained or will within 3 months attain, the age of 18 years

4 That before registration as a dental student every applicant should be required to have passed (1) A recognized preliminary examination in general education which should be the same as that required for medical students (2) An additional examination

or additional examinations conducted or recognized by one of the licensing bodies which should be the same as the examination or examinations required for medical students

PROFESSIONAL STUDY

Every candidate for a degree or licence in dentistry or dental surgery should be required before admission to the final or qualifying examination to produce certificates showing

(i) That he is at least 21 years of age

(ii) That he has been registered as a dental student

(iii) That he has subsequently to registration as a dental student been engaged in professional study for at least four years of which three years at least shall have been spent at a school or schools recognized for professional study by one of the licensing bodies

(iv) That subsequently to registration as a dental student he has attended at a recognized medical or dental school courses of instruction which should be the same as those for medical students in (*a*) chemistry and (*b*) physics in their application to medicine and dentistry (*c*) elementary biology (A student who has diligently attended an approved course of elementary biology in a teaching institution recognized by a licensing body may be admitted to a professional examination in elementary biology immediately after his registration as a dental student) That he has attended at a recognized medical school courses of instruction *specially adapted for students in dentistry* in the following subjects (*d*) human anatomy including dissections for three academic terms or nine months This should include not less than 40 lectures and or demonstrations The course of dissections shall include dissections of the head and neck (*e*) Physiology (with laboratory instruction) extending over two academic terms or six months This should include not less than 40 lectures and/or demonstrations also a practical course in chemical and experimental physiology of not less than 40 hours (*f*) Histology should consist of a practical course of not less than 30 hours (*g*) General pathology for two academic terms (not less than 40 lectures and/or demonstrations) (*h*) Bacteriology for one term (not less than 10 lectures and 24 hours practical work) (*i*) Medicine for two academic terms or six months (not less than 30 meetings of the class) (*j*) Surgery for two academic terms or six months (not less than 40 meetings) (*k*) Clinical instruction in a recognized general hospital on selected cases in medicine and in surgery over a period of at least nine calendar months including instruction in venereal diseases with any bearing on dentistry Each of these courses should consist of not less than 50 meetings It is desirable that the systematic courses in medicine and surgery and the clinical instruction should so far as possible be co ordinated The course of instruction in medicine surgery and pathology should normally be taken after the student has passed the examinations in human anatomy and physiology

(v) That he has attended at a recognized dental school courses of instruction in (*a*) Special anatomy human and comparative The course should comprise a minimum of 20 meetings of the class (*b*) Practical normal and morbid histology (16 meetings) (*c*) Dental surgery (20 meetings) (*d*) Materia medica and therapeutics (10 meetings) (*e*) Metallurgy with practical work and demonstrations (16 meetings) (*f*) Dental mechanics and prosthetics (20 meetings) (*g*) Instruction in the use of anaesthetics employed in the practice of dentistry (*h*) Instruction in radiology and its application to dentistry (*i*) The principles of orthodontics (10 meetings)

(vi) That he has for at least two calendar years attended the practice of a recognized dental hospital or of the dental department of a general hospital recognized by a licensing body as forming part of a dental school

(vii) That he has received for not less than 24 calendar months or for 2 000 hours practical instruction in dental mechanics It is recommended that practical instruction in dental mechanics shall be taken at a recognized dental hospital and school If any part of such instruction be taken by the candidate as a pupil with a registered dentist the time devoted to it shall be at least twice the time required for the corresponding instruction taken at a dental school

PROFESSIONAL EXAMINATIONS

The examinations for a degree or licence in dentistry should be partly written partly oral and partly practical and should include the following subjects (*a*) Chemistry physics and biology in their bearing on medicine and dentistry (*b*) Human anatomy the oral examination in which should be conducted mainly on dissections especially of the head and neck (*c*) Physiology the oral examination in which should include practical physiological tests (*d*) Histology which may be included in the examination in either anatomy or physiology (*e*) General pathology the oral examination in which should be conducted with the aid of specimens including those of diseases connected with dentistry (*f*) Bacteriology the oral examination in which should include simple practical tests (*g*) Medicine and surgery the oral examinations in which should include a clinical examination of patients (*h*) Special anatomy human and comparative (*i*) Dental mechanics prosthetics and metallurgy including practical tests (*j*) Dental surgery including special pathology and histology materia medica and therapeutics and the principles of orthodontics (*k*) Practical dental surgery which should include the usual dental operations—for example filling and extraction of teeth and the giving of anaesthetics—and a clinical examination on the diagnosis and treatment of dental disease and abnormal conditions of the oral cavity

A candidate should produce a certificate of having administered general anaesthetics on at least ten occasions

ACKNOWLEDGMENT

The detailed information published in this Educational Number of the *British Medical Journal* for the benefit of intending students of medicine and newly qualified practitioners has been revised throughout with the co-operation of the deans and secretaries of the medical schools and kindred institutions and of officials in the several public services to all of whom we wish to acknowledge our indebtedness

THE CENTRAL MEDICAL SCHOOL, SUVA, FIJI

The annual report for 1937 of the Central Medical School Suva Fiji gives a concise account of the work of this useful institution During the year forty three students and four graduates were in residence at the school including in addition to a large Fijian contingent men from Samoa Solomon Islands Tonga and other Pacific islands The health of the students appears to have been exceptionally good and this may be attributed to a liberal and well chosen dietary adequate facilities for sport and games and prompt medical treatment of any minor ailments All the students are boarders and their food is prepared by two Indian cooks The annual cost for each student is stated to be approximately £75 so that the four years course of studies involves about £300 a head Total annual expenditure is divided among the nine participating administrations in the ratio of the number of student month units No grants in aid have been received since the cessation of the contribution from the Rockefeller Foundation in 1932 The object of the school is to furnish a corps of qualified native medical practitioners On an average four men qualify from the school each year while the average annual loss among practitioners is two In times of serious epidemics this loss may be greatly increased For example during 1918–19 eight qualified men out of a total of forty eight died of influenza within ten weeks At present there is one native medical practitioner for every 1 600 inhabitants With the inclusion of the Indian population of 86 000 and seven Indian medical practitioners the ratio is one qualified man for 2 700 persons A native medical practitioner service is gradually being built up in other island groups in the South Seas staffed by graduates of the Central Medical School Suva

We much regret to announce the death on August 28 of Sir David Wilkie Professor of Surgery in the University of Edinburgh and surgeon to Edinburgh Royal Infirmary also on August 28 of Dr Alexander Macphail H M Inspector of Anatomy for England and Wales medical officer of the Ministry of Health and Professor of Anatomy of the Royal College of Arts We hope to publish memoirs in our next issue

[The present issue being the Annual Educational Number much current material is held over and the Key to Current Medical Literature is not published this week]

The British Medical Association

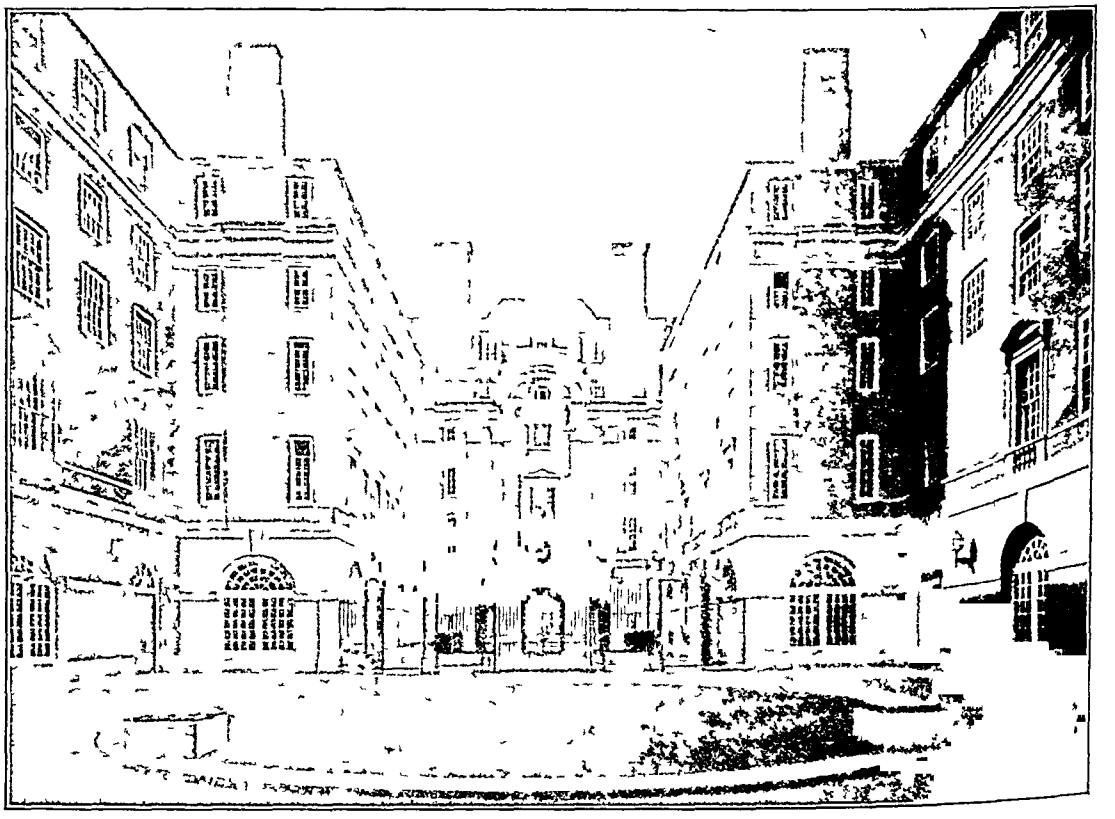
ITS AIMS, WORK, AND CONSTITUTION

The British Medical Association as stated in our introductory article on the Profession of Medicine was founded in 1832 to promote the medical and allied sciences to maintain the honour and interests of the profession and to foster a feeling of friendship among its members To attain these objects it holds meetings, local and central for the discussion of medical and scientific subjects and of professional affairs it publishes the *British Medical Journal* and other scientific publications it maintains a reference and lending library it has instituted lectures and scholarships and grants in aid of research It concerns itself with every side of medical work and much of the Association's daily work consists in aiding individual members in solving professional problems The Association is the oldest largest and most powerful British organization devoted to the welfare of the medical profession Its membership is now 37 000 It has a fine building in Tavistock Square London for its headquarters

In addition meetings are held of Special Groups of practitioners such as pathologists radiologists etc at which problems relating to these particular fields of practice may be discussed

Privileges of Members

A member of the Association has the right—



1 To attend the annual and other general meetings of the Association and the meetings of the Division and Branch to which he or she belongs

2 To receive by post the *British Medical Journal* published weekly which gives a full record with commentary of progress in clinical and scientific medicine and of medico-political affairs and medical economics.

3 To take part in the election of the representative of his or her Division in the Representative Body and also in the election of members of the Council

4 To receive the help and advice of the central office in any professional difficulty

5 To use the Library as a reading room and to borrow current medical or scientific books on payment of postage

BRITISH MEDICAL ASSOCIATION HOUSE LONDON

Constitution and Administration

The Association has Branches and Divisions throughout Great Britain and Northern Ireland and also in the Dominions Colonies, and Dependencies Thus there are 43 Branches and 189 Divisions in Great Britain and Northern Ireland and 68 Branches and 64 Divisions in the British Empire overseas The Branches in Australia and South Africa are linked up in Federal Councils for these respective areas The Medical Association of Eire (I M A and B M A) was formed at the beginning of 1936 and is now a corporate group of Branches and Divisions within the Association To the Association there is affiliated the Canadian Medical Association Members of Divisions elect representatives on the Branch Councils and also a member or members of the Representative Body which is the governing body of the Association and determines its policy

The Council is the executive of the Association It is elected partly by the Divisions and Branches and partly by the Representative Body and includes representatives of the public health service Navy Army Air Force and Indian Medical Services The Representative Body and Council elect standing committees to take charge of different subjects Among these may be mentioned the General Practice Special Practice Science Ethical Hospitals Public Health and Naval and Military Committees There are Committees also for the Dominions Scotland and Wales and for the working machinery of the Association such as the Organization Finance and Journal Committees The Insurance Acts Committee elected partly by the Association and partly by insurance medical practitioners is the recognized executive and mouthpiece of the insurance practitioners of Great Britain and Northern Ireland

The full benefits of the Association can be secured only by the co operation of large numbers of the medical profession for the greater the membership and the funds the more efficient and influential the organization A generous concession is made as regards subscription for those recently qualified for whom the Association has done much in improving the conditions of appointment in the public services or in civil life The Association's work for the Services is well known It feels a special responsibility to those members of the profession who by reason of their position are precluded from taking common action

Subscriptions and Applications for Membership

The ordinary subscription to the British Medical Association is 3 guineas a year for members resident in Great Britain and Northern Ireland but this is subject to exceptions Thus newly qualified practitioners elected within two years of registration pay half the sum up to the end of the fourth year after registration Service officers on the active list of the R N R A F R A M C (Reserve) and I M S pay 2 guineas concessions are made also to members of (in the British Isles) of forty years standing to members of medical years standing who have retired from practice to medical men couples residing together and to certain whole time teachers research workers The ordinary subscription for members abroad is 14 guineas but many overseas Branches have special local subscriptions After fifty years of membership no subscription is payable A member elected after June 30 pays the subscription for that year

All duly qualified British medical practitioners are eligible for election Full particulars can be obtained from the Secretary B M A House Tavistock Square London W C 1

How the Purity of LACTOGEN is Ensured and Safeguarded

In the production of Lactogen, every possible safeguard and precaution is taken to ensure the maintenance of purity at every stage Only the purest and richest cows milk, after special tests, is used in the preparation of Lactogen Right through the process of manufacture, rigid safeguards are taken to ensure freedom from contamination The finished product, which is untouched by hand throughout, is packed in specially designed airtight containers as a final safeguard Thus Lactogen, which in proportion and in physical characteristics so closely resembles breast-milk, is also the safest food that it is possible to obtain

ST. ANDREW'S HOSPITAL
FOR MENTAL DISORDERS
NORTHAMPTON

FOR THE UPPER AND MIDDLE CLASSES ONLY

Patron THE MOST HON. THE MARQUESS OF EXETER, C.I.G., A.D.C.

Medical Superintendent THOMAS TENNENT, J.D., F.R.C.P., D.P.H., D.P.M.

This Registered Hospital is situated in 100 acres of park and pleasure grounds. Voluntary patients who are suffering from incipient mental disorders or wish to prevent recurrent attacks of mental trouble temporary patients and certified patients of both sexes are received for treatment. Clinical, bacteriological, biochemical and pathological examinations. Private rooms with special nurses may be had in the Hospital or in one of the numerous villas in the grounds of the Institution, both can be provided.

WANTAGE HOUSE

This is a Reception Hospital in detached grounds with a separate entrance to which patients can be admitted. It is equipped with all the apparatus for the most modern treatment of Mental and Nervous Disorders. It contains special departments for hydrotherapy by various methods, including Turkish and Russian baths, the prolonged immersion bath, Vichy Douche, Scotch Douche, Electrical bath, Psychic cures, treatment etc. There is an Operating Theatre, a Dental Surgery, an X-ray room and Ultra Violet Apparatus, and a Department for Diathermy and High Frequency treatment. It also contains Laboratories for biochemical, bacteriological and pathological research.

MOULTON PARK

Two miles from the Main Hospital there are several branch establishments and villas situated in a park and farm of 600 acres. Milk, meat, fruit, and vegetables are supplied to the Hospital from the farm, gardens and orchards of Moulton Park. Occupation Therapy as a feature of this branch and patients are given every facility for occupying themselves in farming, gardening and fruit growing.

BRYN-Y-NEUADD HALL

The seaside house of St. Andrew's Hospital is beautifully situated in a park of 40 acres, Llanfairfechan, on the finest scenery in North Wales. On the North West side of the Estate a mile of sea coast forms the boundary. Patients may visit this Branch for a short seaside change or for longer periods. The Hospital has its own private bathing house on the seashore. There is trout-fishing in the park.
At all the branches of the Hospital there are cricket grounds, football and hockey grounds, lawn tennis courts (grass and hard courts), croquet grounds, golf courses and bowling greens. Ladies and gentlemen have their own gardens and facilities are provided for handicrafts, such as carpentry, etc.

For terms and further particulars apply to the Medical Superintendent (Telephone No. 2356 and 2357 Northampton), who can be seen in London by appointment.

ST. MARY'S HOSPITAL MEDICAL SCHOOL, W.2

(University of London)

The WINTER SESSION will begin on October 1st 1938

EXCEPTIONAL SITUATION	The situation of the Hospital and Medical School is unique for while it is adjacent to a large poor district with a population of 60 000 it is also within a few minutes walk of Kensington Gardens and an extensive residential district in which students can live and so avoid a daily wearisome journey to and from their work Recent structural alterations include two new operating theatres and 75 additional beds
REBUILDING OF THE MEDICAL SCHOOL	Approximately £ 0 000 has been spent in rebuilding the Medical School and Laboratories The New Buildings are now in use Apart from the Laboratories Class-rooms and Theatres for all the subjects in the Curriculum they include a Library Restaurant Students Club Billiard Room Swimming Bath Squash Rackets Court Gymnasium Boxing Ring and an underground Garage for fifty cars
COMPLETE CURRICULUM	The entire Curriculum is provided and students may join the School at one of three dates after matriculation
SPECIAL CLINICAL FACILITIES	The formation of Clinical Units in Medicine and Surgery has been an important advance in connection with the Clinical teaching and this has been further developed by the affiliation for teaching purposes of several of the Hospitals in the neighbourhood bringing up the total number of beds available for teaching to 1 600 By agreement with Queen Charlotte's Lying in Hospital all students of St Mary's attend a short course of instruction there without extra fee before entering upon their duties in the Maternity District of St Mary's
INSTITUTE OF PATHOLOGY AND RESEARCH	The Institute of Pathology and Research under the directorship of Sir Almroth Wright F R S embraces seven departments the heads of which are members of the Honorary Staff of the Hospital
RESEARCH STUDENTSHIPS	A considerable sum is devoted annually to research and a part of this is applied to the upkeep of Research Scholarships designed to enable students recently qualified to learn the technique of research work
ENTRANCE SCHOLARSHIPS	All Entrance Scholarships are awarded annually by nomination The Geraldine Harmsworth Scholarship (£200) and other University Scholarships are open to members of British Universities who have completed their examination in Anatomy and Physiology
APPOINTMENTS AFTER QUALIFICATION	Numerous appointments are open to newly qualified members of the Medical School Six House Physicians (eight months) Ten House Surgeons (six to eight months) and Four Resident Obstetric Officers (six months) are appointed annually Two Resident Anæsthetists (six months) £1 0 per annum Four Casualty House Surgeons (six months) £100 per annum with board and residence Two Medical Registrars and Surgical Registrar £ 00 per annum with partial board Obstetric Registrar and Radium Registrar each £ 0 per annum with partial board In addition to the above Five Assistants to the Medical and Surgical Units are appointed from time to time with salaries ranging from £ 00 to £ 0 per annum
ATHLETIC GROUND	The Old Merchant Taylors Ground (13 acres) has been acquired On said it remains dry throughout the winter

The Illustrated Prospectus can be obtained from the School Secretary St Mary's Hospital Paddington W 2

THE MIDDLESEX HOSPITAL MEDICAL SCHOOL

(UNIVERSITY OF LONDON)

THE WINTER SESSION BEGINS ON OCTOBER 4th

The entire Medical Curriculum can be taken at this School Annual value of Scholarships and Prizes £1,000 Large Research Funds

ENTIRE CURRICULUM—THE PROVISION WHEREBY ALL THE SUBJECTS OF THE CURRICULUM INCLUDING CHEMISTRY PHYSICS AND BIOLOGY FOR THE EXAMINATIONS IN THE PRELIMINARY SCIENCES ARE TAUGHT WITHIN THE PRECINCTS of the HOSPITAL and MEDICAL SCHOOL and every effort made to encourage co ordination ensures that the student instead of proceeding to the study of the various subjects as if they were isolated and having little or no relation to each other is taught each subject by profes ors and lecturers who are instructing medical students only and are in close touch with all the other departments of the school The rebuilding of the Hospital is complete and those working in the Institution have facilities equal to or superior to those to be found in any other hospital in the United Kingdom The new buildings are not confined to the wards but include a new Out patients Department the Institute of Biochemistry and new Departments for Diseases of Children Neurology Dermatology etc In addition there is open a new Unit devoted to Clinical Research and it contains six small self contained wards and a large Clinical Lecture Theatre The newly built quarters for the Resident Officers have been enlarged and afford greatly improved facilities The following description of the work in various departments is designed to show how co ordination is carried out

CHEMISTRY is taught by Profe or W B Tuck and the cla s room and laboratories are in the immediate vicinity of thee for anatomy phy iology pharmacology patholo y and bacteriolo y This leads to a clo e a sociation with the e departments and the tudent realizes he is not learning ju t the chemistry which he requires for hi first pr fes ional examination but is acquiring knowledge which he will need and have to ap ly in later years

THE DEPARTMENT OF PHYSICS is under the charge of Profe or Sidney Ru who is al o Physician to the Ho ital and engaged in research work involving the u e of X rays Radium Ultra Violet Ray and oth r form of radiation He is in clo e touch with the department of phy iology and p thology and take an active part in departments for clinical therapeutic under his direction the student will realize at once that he is not tudying an i olated ubject for the purpo e of training his mind or imply to comply with regulations and pa an examination but is in touch with a ubject which will be of great and increasing importance in the proper understanding of his work in later years

BIOLOGY—The Lecturer on Biology is Dr J H Woodger who holds a University Reader hip in this subject His teaching in biology is characterized by co-ordination with other departments and the bearing of the subject on the later tages of the curriculum is emphasized Not only is the subject taught as an introduction to the tudy of Anatomy and Physiology but the increasing importance of a knowledge of the lower form of vegetable life and of the protozoa in the cau ation of di ea e and the tudy of in ect carrier of human diseases is emphasized by co-ordination with the Pathological Institute

IN THE DEPARTMENT OF ANATOMY under the direction of Profes or John Kirk with the general cientific tudy of Anatomy and its wider Biological aspect the relation of structure to function and patholo y is not lost ight of Fact of clinical medicine and urgery or pathology Biology and physiology are included in the teaching in order to emphasize the ignificance of anatomical point Ly clas es in Applied Medical and Surgical Anatomy the tudy of this subject is continued in the later tage of the tudent's career

THE TEACHING OF PHYSIOLOGY is in the hands of Pro or Sam on Wright and the department is in close touch with tho e for the teaching of both the preliminary and final subjects of the curriculum It is impre ed upon the tudent in the department that he cannot be a good clinician unle s he obtains a sound knowledge of Phy iology and Physiological teaching is made to overlap the later period of tuition by lecture on Applied Phy iology which are given by the Profe or to tudents during their Clinical Period Again while in the wards the student has the opportunity of applying what he has learnt in the laboratory to the study of clinical problems

PHARMACOLOGY and **THERAPEUTICS** are under the charge of Profe or Ernest Laqueur and the Department is in close touch with the clinical wards and the out patient department Here the tudent is taught to prescribe rationally and to appreciate the action of drugs on the human body in health and di ea e

IN THE BLAND SUTTON INSTITUTE OF PATHOLOGY all the departments of the Medical School are brought in touch Here the tudent learns the SCIENCE OF DISEASE The teaching of Pathology is in the hand of Profe or J McIntosh and under his tuition the tudent is enable to realise that Pathology and Medicine are one and that a clear knowledge of Pathology and Bacteriology is e ential for the prevention diagnosis and treatment of di ea e The teaching of Pathology is brought into the clo e touch with clinical teaching and the student ee the practical application of the cience in which he has been instructed in the earlier ear of the curriculum

THE COURTAULD INSTITUTE OF BIOCHEMISTRY building full equipped with laboratories for teaching and biochemical research Profe or E C Dodd who is in charge of the Department holds comple e cour e in Biochemistry for tudent both in their ea ly year and during their period of in truction in the wards In addition to this the tudent has acquires con tant practical experience of the important modern chemical investigation nece ary for the detection of di ea e and the tudy of its evolution Several valuable po t graduate appointments in this Institute become available for tudents showing pecial ability in this direction

CLINICAL TEACHING is carried out in the general wards and out patient department and in the pecial departments all of which are in clo e touch with the cientific department in the School The tudent has ample opportunities for carrying out the physical examination of patients and with his training on the cientific side combined with instruction in the Art of Medicine is con tantly being brought in contact with patients and being made to realize the human side of his profe ional work

There are ample clinical appointments for all tudents and thirty five Re ident appointments are open annually to tudents of the School who have obtained their degrees or diploma In addition twelve Registrar hips are appointed annually

RESIDENTIAL COLLEGE.—Accommodation for a limited number of tudents is provided in the Ho ital

THE SOCIAL AND ATHLETIC side of the tudent's life is also tudied and the facilities include a Medical Society a Common Room Society and Athletic ground at Cri ehurst The Club include Rugby Football Association Football Golf Cricket Hockey Sailing Swimming etc A Squash Racket Court is also available in the Ho ital

Practical Instruction is afforded under the superintendence of the Professors in Laboratories with the necessary appliances and in Tutorial and Practical Classes connected with the above Chairs and opportunities are afforded to Students to extend their practical knowledge and engage in original research.

Opportunities for Hospital Practice are afforded at the Royal Infirmary, the Royal Hospital for Sick Children, Royal Maternity Hospital, the City Fever Hospital, Edinburgh Municipal Hospitals, and the Royal Edinburgh Hospital for Mental Disorders. Upwards of 3,800 beds are available for the Clinical Instruction of Students of the University.

Four Degrees in Medicine and Surgery are conferred by the University of Edinburgh, viz. Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.).

The Class Fees for M.B. and Ch.B., including Hospital Fee (£12), amount to about £115, and the Matriculation and Examination Fees to £47 14s. 6d. An additional Fee of £1 is payable by those who proceed to M.D., and £1 by those who proceed to Ch.M.

POST-GRADUATE INSTRUCTION.—Courses of instruction are given for the University Diplomas in Public Health, Tropical Medicine and Hygiene, Psychiatry, and Medical Radiology. These Diplomas are open to approved registered practitioners as well as to graduates in Medicine and Surgery of the University. Courses of instruction for the Diploma in Tropical Veterinary Medicine are also given. This Diploma is open to those holding an approved veterinary qualification registrable by the Royal College of Veterinary Surgeons. The University also takes part in the Courses given under the auspices of the Edinburgh Post-Graduate Courses in Medicine. In the departments of the Faculty of Medicine provision is made for research by students of graduate standing. In the University laboratories facilities will be provided for candidates for the Degree of Ph.D. whose applications to engage in research have been accepted by the Senatus.

A Syllabus and further information as to Matriculation, the Curricula of Study for Degrees, etc., may be obtained from the Dean of the Faculty of Medicine, and for Degrees in the Faculties of Arts, Science, Divinity, Law, and Music from the Deans of these Faculties or from the Secretary, and full details are given in the University Calendar, published by James Thin, 45 South Bridge, Edinburgh. Price by post, 5s. 9d.

June 1938. Telephone: Edinburgh 41003. By authority of the Senatus, W. A. FLEMING, Secretary.

LONDON HOSPITAL MEDICAL COLLEGE & DENTAL SCHOOL

THE WINTER SESSION will Open on Monday, October 3rd

The LONDON HOSPITAL serves the East End of London and with eight hundred and ninety beds is the largest voluntary Hospital in England. The Out-patient Department which deals with a hundred thousand new patients per annum is extensively used for teaching.

The size of the Hospital necessitates a large number of resident medical officers. Every year seventy resident house physicians and house surgeons and eighty [illegible] is are appointed from among recently qualified students. The opportunities which these appointments offer for obtainin[illegible]

The [illegible] to the Hospital and is staffed by Professors of Anatomy, Physiology, Bacteriology, Chemical Pathology, Morbid Anatom[illegible] London.

Sp[illegible] Physiology for the Primary F.R.C.S. and Advanced Courses in Surgery for the Final F.R.C.S. Examination and in Med[illegible] examinations, are held twice a year.

Ev[illegible] *PRIZES* of the total value of £90 are awarded annually. Research Funds to the value of £113,000 permit of assistance being given to students and graduates engaged in medical research.

The MEDICAL COLLEGE contains a modern Museum of Pathology and a Library provided with all the current medical periodicals in charge of a full-time Librarian. There is also an Athenaeum Club and Dining Hall, a Gymnasium, a Fives Court, and two Squash Courts in the Students' Hostel. The Athletic Ground of 13 acres at Hale End is within easy distance of the Hospital.

The HOSPITAL is only 20 minutes from Charing Cross and Baker Street Stations. For those who wish to live in immediate proximity to the Hospital there is accommodation for sixty students in the Students' Hostel.

Further details may be obtained from the Dean, Dr. A. E. CLARK KENNEDY, M.D., F.R.C.P., Physician to the Hospital and Fellow of Corpus Christi College, Cambridge, who is always pleased to meet students wishing to see the Hospital and College, and to whom application for admission should be made. Turner Street, London, E.1.

UNIVERSITY OF ABERDEEN

SESSION, 1938-1939

FACULTY OF MEDICINE.

The WINTER SESSION commences on TUESDAY, OCTOBER 4th 1938, and closes on FRIDAY, MARCH 17th 1939
The SUMMER SESSION commences on TUESDAY, APRIL 18th, 1939, and closes on FRIDAY JUNE 23rd 1939
The Certificate of Attestation of Educational Fitness to enter the University, granted by the Scottish Universities Entrance Board, must be exhibited before commencing study for the Degrees of MB, ChB
The Faculty of Medicine embraces Twelve Chairs, besides various Lectureships, and instruction is given in all departments of Medical Science —

THE INCORPORATED EDINBURGH DENTAL HOSPITAL AND SCHOOL

The Incorporated Edinburgh Dental Hospital and School at 30 31 and 32 Chambers Street offers special advantages to Dental Students.

The General Courses required for the Dental Diploma are taken in the School of Medicine of the Royal Colleges.

General Hospital Practice and Clinical Instruction in Medicine and Surgery are taken at the Royal Infirmary.

The School of Medicine and the Royal Infirmary are within three minutes walk of the Dental Hospital.

Dental Hospital Practice extending over two calendar years affords the student ample opportunity for a full acquaintance with every branch of dentistry.

Fee for two years Dental Hospital Practice £.6 6s and Hospital Outfit of Instruments £.7 10s.

Women students are welcomed.

The Practice and Lectures of the Hospital are recognized by and qualify for all the Licensing Boards.

The minimum cost of Professional Education and the Licence in Dental Surgery of the Royal College of Surgeons of Edinburgh amounts to approximately £163 6s.

Students who desire to take a Medical qualification in addition to the Diploma in Dental Surgery have admirable facilities for so doing. The Triple Qualification of the Royal Colleges of Physicians and Surgeons of Edinburgh and the Faculty of Physicians and Surgeons of Glasgow (L.R.C.P. & S.) is recommended. The combined courses are arranged concurrently and should be completed in a minimum time of 5½ years. The minimum cost of Professional Education Triple Qualification and Licence in Dental Surgery amounts to approximately £.60.

Exclusive of premium for Mechanical Instruction (£63) and cost of Hospital Outfit of Instruments.

SOUTHERN RHODESIA MEDICAL SERVICE

GOVERNMENT MEDICAL OFFICER

Applications are invited from fully qualified unmarried male Medical Practitioners with surgical experience for appointment as a Government Medical Officer in the Southern Rhodesia Medical Service.

Salary will be on the scale £600-£25-£750 per annum. There is also a senior grade (£.50-£25 £900) to which promotions are made as vacancies occur. Salary will commence from the date of assumption of duty in Southern Rhodesia. In addition private practice is allowed.

The successful applicant will be required to sign an agreement for three years service in the first instance and thereafter may make application to be placed on the pensionable establishment.

A free second-class steamship passage to Cape Town and first-class railway ticket thence to Southern Rhodesia will be provided.

Canvassing either directly or indirectly will disqualify applicants.

The applicants should state the date on which they would be prepared to leave England if appointed.

Applications stating age qualifications and experience to-gether with copies of testimonials should reach the Official Secretary, Office of the High Commissioner for Southern Rhodesia Rhodesia House 429 Strand London W.C.2. (from whom further particulars and application form may be obtained) not later than September 14th 1938.

ROYAL COLLEGE OF SURGEONS OF EDINBURGH

Applications are invited for the post of CONSERVATOR of the MUSEUM and DIRECTOR of POSTGRADUATE STUDIES tenable for five years with eligibility for reappointment at an initial salary of £1 000 per annum.

Applications along with the names of two persons to whom reference may be made must be lodged not later than October 31st 1938. Particulars of the duties of the post may be obtained from the Secretary Royal College of Surgeons 18 Nicolson Street Edinburgh 8 to whom applications should be addressed.

HIS MAJESTY'S COLONIAL SERVICE

COLONIAL MEDICAL SERVICE.

During 1938, the Secretary of State for the Colonies proposes to select a number of Medical Officers to fill vacancies the majority of which will occur in Tropical Africa and Malaya

QUALIFICATIONS —Candidates must be British subjects of European parentage, under 35 years of age and must possess a medical qualification registrable in the United Kingdom Preference will be given to candidates who have held Hospital or Public Health appointments, or who have special knowledge of anaesthetics, radiology, surgery, medicine, ophthalmology, gynaecology and midwifery, diseases of the ear nose and throat venereal diseases, etc

SALARY —Initial salaries vary from £600 to £700, and rise by increments to a maximum of between £1,000 and £1,200

PRIVATE PRACTICE —Private practice is not allowed as of right, but in the case of some appointments it is permitted on certain conditions

QUARTERS —In Tropical Africa free quarters, or an allowance in lieu are provided In Malaya quarters are provided at an annual rental not exceeding 6% of the officer s salary

PASSAGES —Free first-class passages are provided on first appointment and when proceeding on and returning from leave Assistance is also given towards family passages

TERMS OF APPOINTMENT —The appointments are pensionable, subject to a probationary period which varies from two to three years

COURSES OF INSTRUCTION IN TROPICAL MEDICINE AND HYGIENE —Selected candidates will normally be required to attend a course of instruction leading to the Diploma in Tropical Medicine and Hygiene before proceeding overseas

DUTIES —Although Medical Officers are appointed in the first instance for general service there are opportunities for work in special branches of medicine and surgery, in public health, and in medical research

Further particulars and forms of application may be obtained from the **Director of Recruitment (Colonial Service), 8, Buckingham Gate, London, S W. 1.**

ROYAL ARMY MEDICAL CORPS

Applications are invited from medical men for appointment to commissions in the Royal Army Medical Corps

Candidates will, for the present, be selected for commissions without competitive examination, and will be required to present themselves in London for physical examination and interview on, or about, 21st October, 1938 They must be registered under the Medical Acts, and normally must not be over the age of 28 years

Successful candidates will, in the first instance, be given short service commissions for five years During the 4th year of this period they will be given the opportunity of applying for permanent commissions in either the Royal Army Medical Corps or the Indian Medical Service Those not selected will retire on completion of five years' service with a gratuity of £1,000

Candidates who are successful will, unless they are seconded to complete a hospital appointment, assemble at the Royal Army Medical College, London, on 1st November, 1938

Particulars of the Conditions of Service in the Royal Army Medical Corps pay and allowances, and forms of application, may be obtained on application either in writing, or personally, to the Assistant Director General, Army Medical Services, The War Office, London, S W 1

INDIAN MEDICAL SERVICE

RECRUITMENT OF EUROPEAN OFFICERS

Applications are invited from Medical Men for Permanent Commissions in His Majesty's Indian Medical Service The terms offered include a gratuity of £1 000 on retirement after six years' service, or of £2,500 after 12 years service, together with free return passages for those who no longer desire to remain in the Service In other respects the terms will be as detailed below

British subjects of pure European descent who are under 32 years of age who are registered under the Medical Acts in force in Great Britain and Northern Ireland are eligible to apply

CAREERS

The Indian Medical Service offers a permanent career with wide opportunities of medical experience including clinical preventive specialist and research work At the beginning of his career an officer is employed on the military side which has medical charge of the Indian Army Promotion is on a time scale up to the rank of Lieutenant Colonel and by selection to the ranks of Colonel and Major General An officer may apply after one year's Indian Service to have his name registered for transfer to the civil side from which appointments are made to Civil Surgeoncies which are established at the principal civil centres to provide for the medical needs of Civil Officials and for general medical administrative purposes to specialist (for example public health and bacteriological) services to research posts and to professorships at the Medical Schools

COUNTY BOROUGH OF SOUTHEND-ON-SEA

SOUTHEND MUNICIPAL HOSPITAL

The Health Committee of the Town Council invite applications for appointment of ASSISTANT MEDICAL OFFICER (male) grade I at their Municipal Hospital, Rochford, Essex (465 Beds). Candidates must have had two years' previous resident experience in hospitals and experience in midwifery. Salary £300 per annum rising by annual increments of £25 to £400 per annum with full residential emoluments.

Form of application to either with particulars of the appointment can be obtained from the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex, by whom applications should be received not later than September 14th, 1938.

Town Clerk's Office, H. J. WORWOOD,
Southend-on-Sea. Town Clerk.

COUNTY BOROUGH OF OLDHAM

THE MUNICIPAL HOSPITAL

Applications are invited from fully qualified practitioners for the post of RESIDENT OBSTETRIC OFFICER at the above Hospital (30 Beds).

Candidates must have held previous resident appointments in a Maternity Hospital and have had experience in Ante-Natal work.

The duties are chiefly in connexion with the Maternity Wards and the Ante-Natal Clinics but the officer will also be required to undertake such duties in the Hospital or in the Institutions as may be required.

The appointment is subject to the provisions of the Local Government and Other Officers' Superannuation Act 1922 and the person appointed will be required to pass a medical examination.

Salary £200 rising by annual increments of £25 to £300 per annum with board, laundry and lodging. In accordance with the Grading Scheme of the Corporation the first increment will be paid on April 1st next following the appointment provided a period of six months has elapsed since the commencement of duties otherwise the increment will be paid on the subsequent April 1st.

The appointment may be terminated by one month's notice on either side.

Canvassing or solicitation of testimonials from members of the Council or any Committee appointed by the Council will be a disqualification.

Applications, stating age, experience and qualifications, together with not more than three recent testimonials and endorsed "Resident Obstetric Officer," should be forwarded to the Medical Officer of Health, Town Hall, Oldham, so as to be received not later than 9 a.m. on Monday, September 19th, 1938.

Town Hall, Oldham. TOWN CLERK.
August 6th, 1938.

CITY OF PORTSMOUTH

TUBERCULOSIS OFFICER AND SENIOR ASSISTANT MEDICAL OFFICER OF HEALTH.

Applications are invited for the above appointment from registered medical practitioners having special experience in the diagnosis and treatment of tuberculosis. Previous experience in general public health and the possession of a D.P.H. are essential.

Salary will be at the rate of £700 per annum rising by three annual increments of £30 and one of £37 10s. to a maximum of £937 10s. but the commencing salary will be fixed according to the previous experience of the successful applicant.

Applicants not to exceed 40 years of age.

The duties will be concerned mainly with Tuberculosis but the successful candidate will be required to perform other duties in the Health Department and to deputize for the Medical Officer of Health during his absence in certain aspects of the work.

The post is designated as an established post under the Local Government and Other Officers' Superannuation Act, 1922, and the salary and emoluments will be subject to a statutory deduction of 5 per cent. under that Act. Successful candidates will be required to pass a medical examination and may reside in any district of Portsmouth or Southsea.

Application forms may be obtained from and must be returned to the Medical Officer of Health, The Guildhall, Portsmouth, not later than Saturday, September 10th, 1938.

Canvassing either directly or indirectly will be deemed a disqualification.

The Guildhall, F. J. SPARKS,
Portsmouth. Town Clerk.

FEMERGIN

SANDOZ

ergotamine tartrate

AFFORDS COMPLETE RELIEF FROM PAIN AND OTHER SYMPTOMS IN A HIGH PERCENTAGE OF MIGRAINE PATIENTS

The MIGRAINE ATTACK

as portrayed by Stephen Deutch

"The experience of the past few years has demonstrated fully the value of hypodermic injection of Femergin (ergotamine tartrate) in the relief of an attack of migraine"

—*Medical Annual* 1937 p 208

"Certain recent work goes to confirm the view that the headache of migraine is associated with a vasodilatation of the meningeal vessels First we have the action of ergotamine tartrate This drug was introduced as a remedy for the pain of migraine a few years ago, and experience has shown it to have a most potent action in cutting short an attack"

—*Glasg Med J* 1937 *10* 214

"Because of the constancy and character of the relief obtained from 1042 headaches in eighty-nine sufferers of migraine after the administration of ergotamine tartrate, I recommended its use for the termination of these attacks, and believe that the drug is a valuable addition to medical therapeutics"

—*J Amer Med Ass* 1936 *107* 171

THE PRACTITIONER

Edited by
SIR HUMPHRY ROLLESTON BT GCVO KCB MD FRCP and ALAN MONCRIEFF MD FRCP

DISORDERS OF SEX

SEPTEMBER 1938

It is generally agreed that medical education still presents several troublesome deficiencies One of these undoubtedly is instruction on the problems of sexual disorders In *The Practitioner* for September a group of experts deal with these maladies and their management from different angles Dr Havelock Ellis rightly explains in his introduction that the medical schools provide for this subject little if any better than they did fifty years ago Medical practitioners and students will find great help therefore, in this attempt to remedy a striking defect in the medical curriculum

FOOTWEAR & NATIONAL FITNESS

MEDICAL men have, of course, long realised the importance to fitness of properly made and accurately fitted footwear

It has been said that manufacturers and shoe retailers have failed in the past to provide such footwear, and that retailers have lacked the necessary knowledge and skill to fit shoes correctly

We would draw attention to the fact that we have long been alive to the importance of this matter, and have concentrated for many years upon the production of shoes the correct construction of which meets with the approval of medical men, and which can be fitted with great accuracy by properly trained assistants

There are more than 300 retailers who are fully trained and qualified to fit our shoes correctly

Church's Arch Moulded Shoes are made in a wide variety of styles for men and women (there is nothing of the 'surgical" shoe about them) They contain fixed supports for the longitudinal and metatarsal arches, and they are available in a full range of graded fittings, which include six different widths in sizes and half sizes—upwards of 100 fittings in all

We will gladly send particulars to anyone interested

Church's
ARCH-MOULDED
SHOES

are a

Spencer Speciality

Lumbo-sacral Strain, Sacro-iliac Relaxation, Faulty Posture and Mild Curvatures are Aided by Spencer Supports Designed for the Individual Patient and Specific Condition

All Spencer Supports are designed to help support the abdominal muscles and to assist in correcting the pelvic tilt Each is individually designed, cut and made for the patient Thus the doctors' exact specifications can be incorporated into the garment It will fit perfectly and be securely anchored to the figure, ensuring constant unvarying support The weight of support in a Spencer is always placed on the pelvic girdle—not on the spine at or above the lumbar region (A support that places the strain on the lumbar region is likely to cause backache and nervousness)

Spencers are comfortable, light in weight, flexible and easily laundered They are guaranteed NEVER to lose their shape

BEWARE OF SUBSTITUTION—Spencer Corsets Ltd regret the necessity of warning the medical profession that in several instances where doctors have specifically prescribed a Spencer Support, a corset of another make has been substituted and because its makers do not understand the Spencer principles of individual designing has been unsatisfactory Every genuine Spencer Support bears the SPENCER Label

Trained Spencer Corsetiere are resident throughout the Kingdom

Name of nearest gladly supplied on request

A scientifically trained Spencer Corsetiere will call at your surgery or at your patient's home to take measurements under your supervision

IMPORTANT ANNOUNCEMENT

'SUMMIT' Hypodermic Needle now ALL-BRITISH

The sole manufacturing rights of the 'SUMMIT' hypodermic needle having recently been taken over by S and R J Everett and Company Limited, it is now entirely British

EXCLUSIVE FEATURES OF 'SUMMIT'

(1) EASY TO WIRE
Cleaning wire can be conveniently inserted through the mount due to a tapered cone running down the needle bore.

(2) FIRM SILKY FIT
Ensured by a soft durable metal seating to a specially reinforced mount (Pat 7359)

(3) EASY TO ATTACH
The shape of the Summit mount enables it to be firmly gripped between the thumb and forefinger

(4) LEGIBLE NUMBERING
Owing to the shape and construction of the mount the needle size is cast on it in very legible characters

(5) APPEARANCE
The special metal with which the mount is made retains a perfect appearance throughout the life of the needle

"ALMOST INSTANTANEOUS RELIEF IN THE SEVEREST ATTACKS OF ANGINAL PAIN"

Euphyllin, administered intravenously, will check severe Anginal pains, even during the injection

Euphyllin dilates the coronary and kidney vessels, greatly increases the rate of flow of blood through the heart and improves the mechanism of exchange between the blood and the tissues

Euphyllin is a non-mercurial diuretic of great potency and can therefore be recommended for oedema, uremia, eclampsia, etc

RELIEF OF ECZEMA ★

We have on record many cases where persistent eczema which had proved refractory has yielded readily to Sphagnol Peat Ointment It is commonly known that difficulty in obtaining rapid healing of eczematous conditions is often due to interference by the patient provoked by the intensive irritation Particularly is this so with children Sphagnol Ointment soothes from the first application giving instant relief from itching At the same time the healing peat distillates which it contains promote the growth of clear healthy skin
In case you have had no personal experience of Sphagnol we shall be pleased to send you a clinical size sample for testing if you will write to Peat Products (Sphagnol) Ltd Dept B M J 13 21 Bush Lane London E C 4

CONTAINS DISTILLATES OF PEAT

MEDICAL SOAPS OINTMENT SUPPOSITORIES, ETC

VITAMIN B_1 B.D.H.

MODERN diets usually contain sub-optimal quantities of Vitamin B_1 Thus latent hypovitaminosis is common and the premonitory symptoms of clinical B_1-hypovitaminosis—anorexia and constipation—are frequently encountered, particularly during convalescence *The diminished appetite will tend to* bring about an intensification of the condition, the patient's symptoms thereby being aggravated

The extra-dietary supply of Vitamin B_1 is thus a matter of considerable importance, even in minor conditions of deficiency

Recently it has been suggested that susceptibility to poliomyelitis is increased in B_1-hypovitaminosis (Can Med Assoc Journ, March 1938, p 260), and it is recommended that ' a fair clinical trial should be given to this natural nerve-protective agency which has *proved to be so effectual in the treatment* of other paralytic conditions of undoubted similarity'

The administration of Vitamin B_1 B D H. is recommended, therefore, as a prophylactic measure and as collateral therapy in all acute and febrile infections as well as in convalescence

THE WORLD-RENOWNED NATURAL MINERAL WATER

FERMENTATIVE DYSPEPSIA

When the secretion is vitiated in quality, and the motricity of the stomach weakens that organ dilates and the gastric stagnation allows the micro-organisms of many ferments to develop Quite a series of acids are then to be met with (butyric, lactic, acetic etc) which not only irritate the mucosa, but further, after their passage into the intestine, become absorbed by the lymph atics and swept into the circulation **Vichy-Célestins,** by its slightly stimulating action, clears out the stomach, and thus avoids stagnation and consequent fermentation As, in addition to doing this, it modifies stomachal metabolism the secretions return little by little to their normal physiological condition

NATURAL VICHY SALT for Drinking and Baths

VICHY DIGESTIVE PASTILLES prepared with Natural Vichy Salt

MANDECAL

(Compound Calcium Mandelate B D H)

IN PYELITIS OF PREGNANCY

Clinical trials have shown that the tendency of mandelic acid therapy to cause nausea has been reduced to a minimum in Mandecal

This preparation is ideal, therefore, for the treatment of pyelitis of pregnancy, as well as Bact coli infections in persons of all ages who are readily nauseated

In Mandecal, the immiscibility of calcium mandelate has been overcome, and a pleasant, palatable suspension is easily formed by stirring the powder in water

As with Mandelix (Elixir of Ammonium Mandelate B D H), the collateral administration of ammonium chloride is rarely necessary with Mandecal

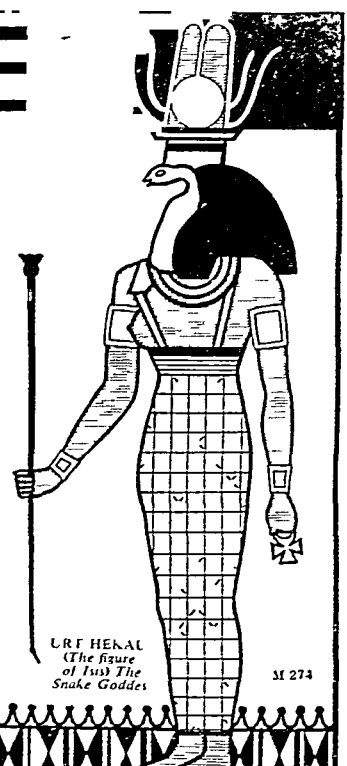
OVALTINE

BEFORE AND AFTER OPERATIONS



THE use of Ovaltine before a major operation is of great service in helping to build up the system against the strain involved by operative interference In abdominal cases especially where a light and unirritating diet is necessary the use of Ovaltine alone for a few days before the operation will be found sufficient to maintain the patient s nutrition at a sufficiently high level

After severe operations the regular use of Ovaltine is of the greatest service on account of its bland nature its ready digestibility and its highly nourishing and sustaining properties

Ovaltine is a complete food composed of fresh full cream milk eggs and malt extract in the form of crisp granules which dissolve readily in milk to form a delicious beverage acceptable to the convalescent patient

INDICATIONS FOR 'SANATOGEN' No 12

INSOMNIA

The Part Played by Cerebral Congestion.

A distinguished neurologist recently characterised insomnia as presenting "one of the most exacting problems which confront the physician" The causes are so various that their removal or attenuation calls for considerable judgment and diagnostic skill Pain or discomfort consequent on organic disease naturally requires treatment—drug or other, and such common causes as morbid worry and anxiety demand psychologic knowledge and sympathetic understanding To quote an eminent physician "There is no use in telling a patient that it does not matter whether he sleeps or not He knows better than that"

In any event, as another physician has pointed out, "it is unwise to go to bed on an entirely empty stomach, since it is generally accepted by physiologists that cerebral anaemia plays some part in the mechanism of sleep" A temporary diversion of the blood to the organs of digestion and absorption is therefore desirable At the same time, foods difficult of digestion, slow absorption, or liable to fermentation, must be avoided Here 'SANATOGEN', taken shortly before bedtime, has been found of great value

'SANATOGEN' is a carbohydrate-free product of 95 per cent pure milk casein with 5 per cent of sodium glycerophosphate It is easily digested and assimilated It quickly promotes a feeling of physiological comfort and well-being, lays no strain on the digestive faculties, yet sufficiently withdraws blood from the "worrying centres" to bring about healthy and natural sleep 'SANATOGEN', unlike most narcotic drugs, is followed by no unpleasant reaction Nor is it habit-forming

I consider 'Sanatogen' is of undoubted benefit in cases of sleeplessness especially when the sleeplessness is the result of over fatigue
M D

I have much pleasure in stating that the tin of Sanatogen you sent me was very satisfactory, and that I have bought several others since In the case I used it for there was what is often called night starvation, the patient waking at 1 or 2 a m and being unable to sleep again A dose of Sanatogen in milk induced sleep in 20 30 minutes, not once, but as often as it was required i e until a full night s rest was obtained naturally The general health has correspondingly improved —M R C S, L R C P

I find a great deal of benefit is derived in cases of Insomnia by giving 'Sanatogen in the evening This is especially so in the nervous type of patient It is very good even in gastric ulcer and its allies — M R C S, L R C P

STREPTOCIDE

Sulphanilamide Evans

For Oral Administration

In PUERPERAL FEVER

The value of Streptocide was shown by the Report to the Therapeutical Trials Committee of the Medical Research Council (*Lancet*, Nov 27th and Dec 4th, 1937) concerning 106 cases treated at Queen Charlotte's Hospital Many *hundreds of favourable reports have since been received* from doctors the world over

In GONORRHOEA

Streptocide is well adapted to the specialised technique of administration described in the *Lancet* (Aug 13th, p 355) This report proves that sulphanilamide is more efficient than several of the compounds which have been suggested for the purpose The purity of Streptocide gives it the maximum of safety in the intensive dosage necessary for adequate treatment

Streptocide has proved equally successful also in

STREPTOCOCCAL and PNEUMOCOCCAL MENINGITIS ERYSIPELAS, and TONSILLITIS

Streptocide is issued in tablets	0·25 grm	0·5 grm
Bottles of 25	1/3 each	1/6 each
100	3/9	4/6

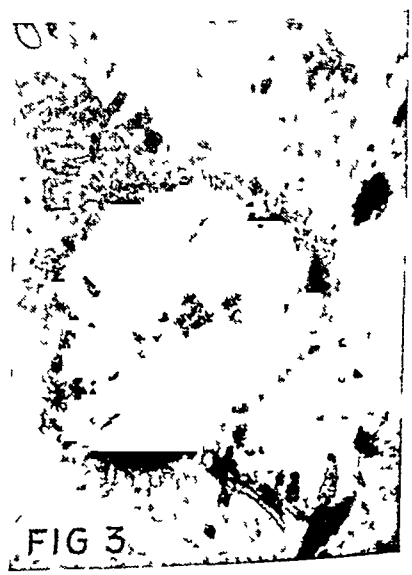
EXTRA-CELLULAR NUTRIMENT
for
MORE COMPLETE ASSIMILATION
IN INFANT DIETARY

FIG. 1

FIG. 2



By the Libby process of Homogenization the tough walls of food cells are burst and broken up into fine particles The nutriment thus being extra-cellular is therefore rendered immediately accessible to the gastric enzymes and thoroughly assimilable without digestive strain

The break up of the fibrous tissue has the added advantage of providing smooth non-irritating bulk and obviating the incidence of intestinal disorders—particularly diarrhœa—primarily due to the passing of food cells through the digestive tract with their tough outer walls intact

Photographs show the comparative difference in *stools* after feeding with (Fig 1) Libby's Homogenized vegetable, (Fig 2) commercially strained vegetable and (Fig 3) home strained vegetable

Libby's Homogenized Vegetable Foods are eminently suitable for very young and weak digestions and can be prescribed with confidence in very early cases of nutritional anæmia They are prepared in six scientifically formulated combinations of Cereal, Vegetables and Fruit These can be prescribed as needed to provide the necessary balance of Vitamins, Minerals and other essentials

Samples together with clinical data and laboratory reports will be gladly supplied upon request to Messrs Libby, McNeill & Libby, Ltd, 15, Lime Street, London, E C 3

ELI LILLY AND COMPANY, INDIANAPOLIS, U S A

A major operation in progress in the operating theatre of a London Hospital

ANTISEPTIC PROTECTION IN THE THEATRE

THE greatest danger in any operation is the risk of introducing bacterial micro-organisms into the system Because of this, elaborate precautions are taken in the operating theatre to prevent infection Modern antiseptic methods have succeeded in eliminating sepsis — once the surgeon's greatest fear and problem

Risks of infection in everyday life, though less serious, are more numerous In ordinary hygiene prophylactic measures cannot, of course, take the elaborate lines of the operating theatre, but fortunately the simple use of soap and water usually affords adequate protection against most forms of infection But the degree of protection naturally depends on the antiseptic, antipruritic and germicidal qualities of the saponifying agent

Wright's Coal Tar Soap has enjoyed the confidence of the medical profession for purposes of general protection for over 70 years It has substantial antiseptic and antipruritic qualities, and to-day, besides being specified by leading bacteriologists as the ideal everyday safeguard against infection, is used (according to the 1932 investigation of the Institute of Industrial Psychology) by doctors themselves more than any other brand of toilet soap Wright's is the *only* soap to contain 'Liquor Carbonis Detergens' (Wright's), the valuable therapeutic used and recommended by eminent dermatologists You can have every confidence in using Wright's *in your* practice and recommending it to *your* patients

WRIGHT'S COAL TAR SOAP

CRUNCHY FOODS

and mastication

It is generally accepted that improperly masticated food presents difficulties to the digestive system Mastication stimulates the flow of saliva in the mouth, and renders the food more acceptible to the stomach Many practitioners believe that this salivation makes the entire work of the digestive tract easier to perform, and therefore that hard foods, because they compel mastication, have an appreciable value to the digestion as a whole

Hard foods are now frequently prescribed as a desirable part of the regular diet Ryvita, a daily bread that is crisp and dry, is recognised to be a valuable addition to the normal diet of to-day

A complimentary carton of Ryvita will gladly be supplied on request

"Vitamin B_1 deficiency an outstanding fault

in the diet of many millions of people"

(B M J, 16 O t, 1937, p 753)

The reduction in Vitamin B_1 intake, due to changes in dietary habits during the last hundred years, normally amounts to at least 50 per cent, and may be as much as 70 per cent It has been demonstrated, both experimentally and clinically, that a shortage of Vitamin B acts as a limiting factor in the maintenance of health and nutrition, and often results in gastro-intestinal disorders, loss of appetite, indigestion, constipation and, if long continued, to neuritis and arthritis

The logical way to rectify such shortage is to restore to the diet the Vitamin B-containing substance whose removal is responsible for the deficiency

This substance is available in the form of Bemax

For years it has been the policy of the proprietors of Bemax to ensure its Vitamin B_1 activity by biological assay of *every day's output* So far as is known, Bemax is the only food product for which such a claim is or can be made

The quantity of Vitamin B_1 supplied by the normal daily dose of Bemax—one tablespoonful—is 200 International Units, an amount sufficient to raise a deficient diet to an optimal level

The normal daily dose of Bemax supplies, in addition to Vitamin B_1, significant quantities of Vitamin B and B_2, Copper, Iron and Phosphorus as well as rich quantities of Vitamin E and other essential dietary elements

Bemax is an entirely natural product consisting only of stabilised wheat germs selected for their Vitamin B_1 activity with no addition whatsoever Clinical sample and literature on request The Bemax Laboratories, 23, Upper Mall, Hammersmith, W 6

Sterility and Habitual Abortion

The increasing use of Vitamin E for habitual abortion and sterility of dietary origin demands a wheat germ oil of proven high activity and of stable Vitamin value Such an oil is available for the medical profession in Fertilol

FERTILOL

Wheat Germ Oil Capsules

A highly active source of Vitamin E

A complimentary box of Fertilol Capsules and brochure sent on request

THE OCCIPITO-POSTERIOR POSITIONS OF THE VERTEX AND THEIR COMPLICATIONS*

BY

CHASSAR MOIR, M D, F R C S Ed, F C O G

Nuffield Professor of Obstetrics and Gynaecology University of Oxford

In opening this discussion on the occipito posterior positions of the vertex it is necessary to define and limit the conditions about which we are to speak For the purpose of promoting a useful discussion I propose that we should consider the case of the patient at or about full term, in whom labour is unduly protracted and in whom the foetal head presents with the occiput in some position other than the anterior or antero lateral By choosing this definition we shall include the common occipito-lateral position, which if it persists until the head is driven low into the pelvis may give rise to serious difficulty, and is then often spoken of as deep transverse arrest of the head

Ere confining myself to the above limitations subsequent discussion may be clarified if a few words are said regarding ante natal examination Different authorities give widely differing estimates of the frequency of the occipito posterior position in the ante natal clinic I believe that the reason for this discrepancy lies in the fact that in the majority of women the occiput, before labour, points directly laterally, or lies within a few degrees of this position If the custom is observed of classifying the position according to one of four possibilities it becomes a personal matter whether such cases are classified as anterior or 'posterior Here I would make a plea for the freer use of the terms 'L O L ' and ' R O L " which more accurately describe the position in question

Not till labour starts does the head usually come to lie in one or other oblique diameter of the pelvis normally the occiput rotates forward, much more rarely it rotates backwards, and in exceptional circumstances it may even come to lie in the hollow of the sacrum It is convenient here to say that I view with much misgiving the habit which seems to be arising of trusting to abdominal examination to determine the position of the foetal head Such examination *may* give fairly reliable information in the ante natal clinic but it becomes increasingly inaccurate as labour advances and the head sinks into the pelvis Moreover it is sometimes mere guesswork to diagnose the position of the foetal head from palpation of the body I have seen a patient in whom the foetal occiput was situated well within the posterior half of the pelvis while the foetal back was still distinctly anterior, and x ray examination has also shown many instances of pronounced rotation of the foetal head on the neck Attempts to divine the position of the head are dangerous, and in dealing with a patient whose labour is unduly protracted a thorough vaginal examination is essential and nothing short of this can give the required information I shall refer to this matter again later

* Read in opening a discussion in the Section of Obstetrics and Gynaecology at the Annual Meeting of the British Medical Association Plymouth 1938

Frequency of Persistent Occipito posterior Position of the Head

It is common knowledge that the great majority of posteriorly placed heads rotate to the front during labour and that a spontaneous delivery is the rule rather than the exception we have here to discuss the case in which rotation does not occur and in which the labour is unduly prolonged Although such cases form but a small proportion of the whole they constitute a major problem in obstetrics At a meeting of this Section in 1928 Dr Douglas Miller read a paper on ' Unsuccessful Forceps Cases and presented an analysis of statistics gathered from various maternity hospitals which showed that the occipito-posterior position of the head—usually undiagnosed—was associated with nearly one third of the total number of cases Had the rachitic areas of the country been excluded from this analysis the proportion would doubtless have been even higher

Cause of Dystocia

The increased difficulty of labour associated with a posterior position of the occiput is usually ascribed to a larger diameter of the foetal head being forced through the pelvis No doubt there is truth in this belief but I confess that the more I study the actual foetus after delivery in such cases the less impressed am I with this explanation The real cause of the difficulty is I believe a simple one and is essentially a maladjustment of the shape of the foetus to the shape of the birth canal The baby after birth lies with the long axis of the head at an angle to the long axis of the body In other words the foetal contour is sharply angled or curved The birth canal through which this foetus is forced is also sharply bent at the lower end and it is only when the two curves coincide (as in the occipito anterior case) that easy delivery results To use an analogy if I force my foot and leg (which are angled to each other at the ankle) through a tall Wellington boot (which is also curved at the ankle)

my foot will slip into position only if the two angles or curves coincide ' Were I to attempt to thrust my foot down backwards, progress would be arrested at the ankle of the boot, and if great force were used either my foot would be sorely bruised or the boot would be ruptured If however, I now use skill and carefully rotate my foot round to the normal position, I am able to push my foot with ease to the bottom of the boot Essentially similar mechanical difficulties arise in the birth canal when the head descends with the occiput directed posteriorly This conception introduces the theory of the unequal foetal flexibilities, which I have fully discussed elsewhere (1932)

"Face-to-pubes" Delivery

It is true that delivery can sometimes be accomplished with surprising ease when the foetus lies with the face directed towards the pubes, but usually in such cases the mother's pelvis is abnormally large (a fairly common finding) or the foetus is small Occasionally, too, delivery is facilitated by a lax or absent perineum, which results in a virtual abolition of the normal curve of the birth canal To quote such cases as an argument against the need for rotation of a posteriorly placed head in obstructed labour is to my mind false reasoning I am aware that at least one school of midwifery holds views to the contrary, but I maintain that while a foetus *may* be born without difficulty in the face-to-pubes position, it is certain that delivery can be still more easily accomplished if the occiput is directed anteriorly and when in addition the *relative sizes of the foetus and pelvis are such that there* is likely to be slight dystocia, then the added handicap of the occipito posterior position becomes a serious matter, and is not infrequently the cause of complete obstruction to delivery

These remarks are commonplace, and must seem superfluous to anyone who, after unsuccessfully attempting to deliver the foetus in the posterior position, has rotated the head and reapplied the forceps correctly, for the ease with which delivery can then be accomplished is often astonishing and cannot fail to make a lasting impression on the operator Yet all too often one hears excuses made for omitting to rotate the posteriorly placed head as a preliminary to forceps delivery I believe that reluctance to perform this simple operation is due to the prevalence of a false idea regarding its supposed difficulty, which in turn finds origin in the fact that details of the correct manœuvres are seldom taught to and are still more rarely learned by, the average undergraduate student

Recently some new light has been thrown on the problems of the mechanics of labour by the use of radiological methods of study Some years ago Thoms (1933) of the Yale Medical School drew attention to the frequency with which occipito posterior positions of the foetus are associated with the dolichopellic pelvis—that is, the pelvis in which the antero-posterior exceeds the transverse measurement of the brim More recently Caldwell, Moloy, and D Esopo (1935 1936) of the Sloane Hospital for Women, New York using advanced methods of *x*-ray study, have confirmed this finding and in a personal communication expressed the view that in certain types of pelves delivery can be more easily accomplished if the foetal head lies with the occiput in the posterior position I respect the opinion of these workers and look forward with eagerness to their further contributions to obstetrics, but it is only right to say that the evidence so far presented by the latter group is not likely to lead to the general acceptance of the last-mentioned claim In any event such pelves are extremely rare, and their detection requires the use of *x*-ray pelvimetry, in the meantime it therefore seems unwise to complicate obstetrical teaching on this simple issue in order that the very exceptional case may be treated by methods of as yet unproved superiority

Cause of Non-rotation of Head

Non-rotation or malrotation of the foetal head may result from several causes I have already mentioned three—a large pelvis, a small foetus, and a deficient perineum In such cases there is usually an easy delivery Certain unusual postures of the foetus *in utero* or an increased inclination of the pelvis may both, in my opinion, favour a posterior lie of the head and hinder its forward rotation A poorly flexed foetal head is another important cause of non rotation In such a case the long axis of the head is no longer set at an angle to the long axis of the body, the forces which normally bring about rotation are therefore not evoked, and obstruction may result

Still more serious are the cases in which non rotation of the head is a manifestation of some other abnormality Not infrequently persistence of the posterior position is associated with a mild degree of pelvic contraction which delays or prevents the head from reaching the lower pelvis and reacting to the curve of the birth canal Serious obstetrical difficulties may then arise, for the combination of abnormalities is far more difficult to deal with than either taken separately Similarly, in the occipito posterior case there is often an early escape of liquor amnii, and this, together with the prolonged labour, favours abnormal retraction and moulding of the uterine muscle around the foetal neck—the so-called contraction ring of the uterus This condition is by no means unusual, and should always be looked for if difficulty is encountered in rotating the foetus Speaking from my own experience, I have no qualms in dealing with the uncomplicated posteriorly placed head, but I dread a narrowing of the lower pelvis or a contraction ring of the uterus, of both of which conditions the persistence of the posterior position of the occiput is sometimes merely the token

Danger to Mother and Foetus

The increased danger associated with non rotation of the head is strikingly shown by a table which I borrow from Douglas Miller's excellent paper on the subject (1930) The foetal mortality is deplorably high, yet, especially with regard to cases in which the child is forcibly extracted in the face-to-pubes position, the danger is actually underestimated, for many infants die in the first days of life or suffer from injuries of a non fatal variety The forceps blades do not take a kindly hold of the posteriorly placed head they are difficult to lock, and they easily slip, causing serious injury to the vagina Extraction is almost impossible without rupture of the perineum, and the tear may easily extend into the rectum

Table showing Danger associated with Non rotation of the Head (after Miller)

	Termination	
	Spontaneous Forward Rotation	Failure to Rotate
Maternal mortality	Nil	2·0
Foetal mortality	27/	22·3
Puerperal morbidity	65/	22·3

It is perhaps not sufficiently realized that the majority of babies which die during forceps extraction are killed because the forceps blades are wrongly applied the operator having omitted the preliminary step of rotating the occiput completely to the front It would be an exaggeration to say that injuries such as facial paralysis and tentorial tears never occur when the blades are correctly applied over each maxilla but I believe that such a statement would not depart far from the truth It is always instructive to examine the baby's head after forceps delivery too often the tell tale marks make it disappointingly evident that the blades have been applied not to the robust maxillae but to the yielding brow and occipito mastoid region and from this fact one may deduce that dangerous compression of the cranial vault has taken place It is not always easy to rotate completely the head which is in deep transverse arrest but with practice this manœuvre is usually successful and by its accomplishment the chances of safe delivery of the foetus are greatly improved

The Course of Labour and Diagnosis

I shall not do more than touch on diagnosis Late engagement of the head and early rupture of the membranes in the absence of disproportion between the head and pelvis is an ominous sign A foetal heart heard far on the flank or more especially one heard faintly over a wide area of lower abdomen may help in diagnosis but must not be relied on

The character of the uterine contractions is often peculiar They are short painful and unaccompanied by bearing down effort It might be supposed that such ineffective contractions are the primary abnormality and the cause of the slow advance of the foetus but I tend to the view that when the head descends into the occipito posterior position the vagina is not evenly distended and consequently the reflex which normally augments contractions and compels the patient to bear down is not evoked I am always suspicious of the patient who although she has started labour well has made little or no advance over several hours and about whom the nurse in charge querulously exclaims If only she would use her pains! Such a patient should be carefully examined and not infrequently it will be found that the foetal head has remained unrotated in the occipito posterior position

I have already referred to the frequency with which non rotation of the head is associated with obstructed labour yet in spite of the commonness of the condition many of these cases remain undiagnosed until too late The chief reason for this is that the suture lines are obscured by an oedematous scalp it is only by passing the fingers to a higher level and feeling the foetal ear that a certain diagnosis can be made To do this an anaesthetic is necessary and the whole hand suitably lubricated must be gently inserted into the vagina Such an examination should always precede forceps delivery in any case of doubt That grand old man of obstetrics Sir Halliday Croom used to speak of this procedure as the trump card of obstetrics I cannot do better than end with his famous words Gentlemen gentlemen I pray beg each one of you *when in doubt play trumps*

(From the Courtauld Institute of Biochemistry Middlesex Hospital London)

It was found many years ago that the injection of oestrogenic extracts after mating interfered with the establishment of pregnancy (Smith 1926 Parkes and Bellerby 1926) and subsequent work including numerous experiments carried out with pure hormone substances has amply confirmed this observation Small doses of an oestrogen prevent the ova of mice from passing down the tube (Burdick and Pincus 1935) while larger doses cause abnormal acceleration of transit (Burdick and Whitney 1937) Both types of disturbance cause death of the blastocyst In the rabbit the cleavage rate of the egg is not affected by the injection of oestrone after ovulation but the embryos die the maximum sensitivity to oestrone is on the third and fourth days after mating (Pincus and Kirsch 1936 Pincus 1936 may be consulted for further discussion)

The prevention of progestational changes in the uterus of the rabbit after ovulation by injection of oestrogenic hormones has been extensively studied by Courrier and his co workers Adequate doses of oestrone given in the early stages of the luteal phase will suppress endometrial proliferation and prevent implantation of the egg The administration of oestrone after implantation has taken place causes death of the embryo The rabbit is very sensitive up to the fourth day after mating less so on the fifth and sixth and more so again at the twelfth (Courrier and Kehl 1932 Courrier and Reynaud 1933 1934)

The action of oestrone in inhibiting progestational changes in the uterus is well shown and can be quantitatively assessed by experiments on immature or ovariectomized test animals sensitized with oestrone and then injected simultaneously with progesterone and varying amounts of oestrone (Hisaw and Leonard 1930 Allen 1932 Robson 1936 Zuckerman 1937)

In view of these facts it is clearly of the greatest importance to know whether oral administration of oestrogens can be made effective enough to prevent or disturb implantation of the blastocyst Recently a new derivative of oestradiol has been prepared by Inhoffen and Hohlweg (1938) This substance ethinyl oestradiol is reported to be seventeen times as active by mouth as oestradiol (Inhoffen Logemann Hohlweg and Serini 1938) Further the new synthetic oestrogen diethyl stilboestrol prepared by Dodds Golberg Lawson and Robinson (1938) the biological properties of which have been described by Dodds Lawson and Noble (1938) is reported to be highly active by mouth The capacity of these two substances given orally to suppress the progestational action of progesterone and to prevent the establishment of pregnancy has therefore been investigated

* Leverhulme Fellowship Royal College of Physicians of London

Administration

The substances were fed to rabbits in propylene glycol solution, which was swallowed readily Diethyl-stilboestrol was administered to the rats in oil solution by stomach tube under brief ether anaesthesia The concentrations were so adjusted that the maximum daily dose was 1 c cm

Inhibition of the Effect of Progesterone on the Uterus of the Immature Rabbit

Immature female rabbits were sensitized with three doses of 50 I U (0 005 mg) of oestrone according to the technique of McPhail (1934) They were then given a standard dose of 0 6 I U (0 6 mg) of progesterone in oil solution over three days by subcutaneous injection together with varying amounts of ethinyl oestradiol or diethyl-stilboestrol by mouth It was found that total doses of 0 15 mg, 0 3 mg, and 0 75 mg of the oestrogens very greatly decreased the progestational proliferation caused by the progesterone, while 1 5 mg and 3 mg abolished it It was difficult to assess accurately the slight proliferation occurring with the medium doses of the oestrogens, but it seems that diethyl-stilboestrol is slightly less effective than is ethinyl oestradiol in suppressing progestational proliferation

Inhibition of Implantation in Rabbits

Technique and Controls—Adult rabbits which had been isolated for several weeks were mated, and most of them were laparotomized one to three days later to ascertain if ovulation had taken place Of twenty-four so examined twenty-two were found to have ovulated Of twenty mated rabbits which received no treatment, or only control propylene glycol by mouth during the first week, implantation took place in eighteen The implantation rate, therefore, was good

Oral Administration of Ethinyl Oestradiol—Seven rabbits received ethinyl oestradiol during the first week after mating and were killed and examined at from six to nine days *post coitum* when progestational proliferation should have been well advanced The details are given in Table I The uteri of the four which were treated

TABLE I—*Effect of Ethinyl Oestradiol by Mouth on Implantation in the Rabbit*

No of Rabbit	Ethinyl Oestradiol given			Rabbit Killed Days after Mating	Normal Implantations	Progestational Proliferation of Endometrium
	Days after Mating (inclusive)	Daily Dose in mg	Total Dose in mg

DNT 5	2–7	1	6	8	0	

for five or six days showed little or no progestational proliferation although the corpora lutea in the ovary seemed quite normal The two larger doses had caused tremendous oedema and hyperaemia of the uteri In the rabbit receiving two doses of 1 mg the endometrium had proliferated but the glandular development was poor for eight days after ovulation There were no signs of pregnancy in these rabbits In the two animals receiving doses of 0 25 mg on the fifth and sixth days after mating, implantation had not been entirely inhibited, though the number of embryos (two) found in each was much below the number of corpora lutea, suggesting that there was partial failure The results in general leave no doubt that ethinyl oestradiol by mouth is effective in preventing implantation after mating and ovulation

Oral Administration of Diethyl-stilboestrol—The results with diethyl stilboestrol are given in Table II It will be

TABLE II—*Effect of Diethyl stilboestrol by Mouth on Implantation in the Rabbit*

No of Rabbit	Diethyl stilboestrol given			Rabbit Killed Days after Mating	Normal Implantations	Progestational Proliferation of Endometrium
	Days after Mating (inclusive)	Daily Dose in mg	Total Dose in mg			
DNT 41	3–7	0 5 (twice daily)	5	8	1	Good
DNT 42	3–7	0 5 (twice daily)	5	8	2	Subnormal

DNT 40	3–7	4	20	8	0	

seen immediately that 1 mg daily given over a five day period after mating does not entirely prevent the occurrence of normal implantations, while the endometrial proliferation is not seriously interfered with A similar dose of ethinyl oestradiol caused profound uterine changes quite incompatible with implantation of blastocysts With larger doses of diethyl-stilboestrol normal implantations were not found, but a total of 10 mg was required before the progestational proliferation was mainly inhibited Not until 20 mg was given did the intense hyperaemia and congestion of the uterus appear which was found even with 3 mg of ethinyl oestradiol Both the microscopic and the macroscopic observations leave no doubt that diethyl-stilboestrol is effective in preventing implantation and progestational proliferation of the endometrium in the mated rabbit, but it is much less effective than ethinyl oestradiol In several of the animals receiving the smaller doses of diethyl-stilboestrol there were nodules in the uterus which were obviously not normal implantations and which seemed to consist of a decidual reaction with a degenerate vesicle It is likely that a degree of inhibition of progesterone had been attained incompatible with the continued survival of the blastocyst, but inadequate to prevent decidua formation

Inhibition of Implantation in Rats

Technique and Controls—Female white Wistar rats weighing 150 to 250 grammes were segregated after detection of mating by the presence of a vaginal plug Oral administration of diethyl-stilboestrol began one day later The total dose was dissolved in 3 c cm of oil and 1 c cm was given daily for three consecutive days The animals were killed on the eighth day *post coitum* Control animals received oil only

Oral Administration of Diethyl-stilboestrol—The results given in Table III showed that implantation occurred in eight of eleven control rats and in two of three rats

0·001 mg of the oestrogen. It occurred in only three of eleven rats receiving between 0·005 and 0·016 mg. and was completely absent in thirteen rats receiving larger

TABLE III—*Effect of Diethyl stilboestrol by Mouth on Implantation in Rats*

Total Dose gamma	No. of Rats	Pregnancy	Total Dose gamma	No. of Rats	Pregnancy
0	11	8	20	3	0

5	3	1	50	2	0
10	6	1	100	2	0
16	2	1	200	3	0

doses. It is thus evident that this new synthetic oestrogen given by mouth is highly effective in preventing implantation in rats.

Interruption of Established Pregnancy

Technique and Controls.—Fifteen rabbits were used for experiments on established pregnancy. A preliminary laparotomy under ether anaesthesia at eight to twelve days after mating was made in twelve of these to confirm the presence of normal implantation. Five of those laparotomized received control treatment with propylene glycol alone and all were subsequently found to have normal foetuses.

Oral Administration of Ethinyl Oestradiol.—Six rabbits were treated with ethinyl oestradiol by mouth beginning nine or ten days after mating and were killed at twelve to fourteen days. The details are shown in Table IV. All

TABLE IV—*Effect of Ethinyl Oestradiol by Mouth on Established Pregnancy in the Rabbit*

No. of Rabbit	Ethinyl Oestradiol Given			Rabbit Killed Days after Mating	Condition of Embryos
	Days after Mating (inclusive)	Daily Dose in mg.	Total Dose in mg.		
DNT 17	9–10	0·1	0·2	13	2 normal conceptions 5 resorbing
DNT 7	9–10	0·25	0·5	13	4 resorbing
DNT 8	9–10	0·25	0·5	13	9 "
DNT 15	10–11	0·25	0·5	14	8 "
DNT 10	8–9	0·5	1	12	7
DNT 2	9–11	0·5	1·5	13	2

the embryos in the rabbits receiving a total of 0·5 mg. or more were resorbed or undergoing resorption. In the remaining animal receiving 0·2 mg. two live foetuses were found in seven implantation sites. Observations on the state of the resorbing conceptuses seem to agree substantially with those made by Courrier and there can be little doubt that identical effects are produced by the injection of oestrone and the oral administration of ethinyl oestradiol.

Oral Administration of Diethyl stilboestrol.—A rabbit receiving 1 mg. of this oestrogen on the thirteenth fourteenth and fifteenth days after mating was found on the seventeenth day to contain ten embryos all being resorbed. A similar dose on the eleventh twelfth and thirteenth days and half this dose on the tenth eleventh and twelfth days in other rabbits did not disturb pregnancy. It is evident therefore as in the work on implantation that the denidatory effectiveness of diethyl stilboestrol is much less than that of ethinyl oestradiol.

Discussion

The above results indicate that small doses of orally active oestrogen administered by mouth will prevent implantation of the blastocyst if given soon after ovulation or may terminate established pregnancy. The effect is produced in what is essentially a physiological manner the luteal phase of the cycle is suppressed and another phase induced which though not abnormal in itself is unsuitable for the development of the embryo.

Everything we know about the menstrual cycle of primates suggests that its hormonal control is the same as in lower animals and it is extremely probable that the factors governing the implantation of the fertilized egg are fundamentally similar in women and in lower animals. The experimental conclusions arrived at above should thus be applicable to women though the fact that very large amounts of oestrogen are excreted by pregnant women makes it likely that the period during which oestrogen treatment might be effective would be relatively much shorter than in rabbits.

It would be unwise at the present juncture to make a comparison of the relative suitability of the two substances examined or of other orally active oestrogens for the purpose under consideration. Effectiveness in this kind of test must be greatly influenced by conditions of absorption from the alimentary canal and these conditions certainly vary from species to species. It is difficult to predict what type of substance would be most effectively absorbed by mouth in women. Further the intensive work at present being carried out on the artificial production of oestrogenic substances may well result in the production of a compound also active by mouth but more effective in suppressing the tubal and uterine changes necessary for implantation of the fertilized egg than either of those so far examined.

Summary

Experiments have been carried out on the inhibition of implantation and the interruption of established pregnancy by the oral administration of two new oestrogens—ethinyl oestradiol and diethyl stilboestrol. Both of these substances given by mouth inhibit the effect of progesterone and prevent implantation of the blastocysts in rabbits. Small doses of diethyl stilboestrol prevent implantation in rats while ethinyl oestradiol is highly effective in interrupting established pregnancy in rabbits.

We are much indebted to Sir Henry Dale F.R.S. for his critical interest in this work. The ethinyl oestradiol was kindly supplied by Dr. K. Miescher and Messrs. Ciba Limited.

OBSERVATIONS ON THE TREATMENT OF EMPYEMA IN CHILDREN *

BY

H L. WALLACE, M D., F R C.P Ed

Assistant Physician Royal Edinburgh Hospital for Sick Children Lecturer in Child Life and Health University of Edinburgh

It is with some misgiving that I open a discussion on the treatment of empyema in children, since it is perhaps doubtful whether a physician is qualified to pronounce judgment on a subject regarded by many as being essentially surgical And yet surely empyema is a disease which should vitally concern both physician and surgeon and which, almost more than any other, demands a close liaison between the two The belief has been stated that there is a wide field in medicine to-day for the operating physician, and if such a person were available on the staff of every large hospital it might well be that the treatment of empyema would be in relatively safer hands than it is at present There is perhaps a tendency to-day for the unfortunate child with empyema to fall between the two stools of medicine and surgery and, while conservatism and radicalism grapple with each other for pride of place in the scheme of treatment, the resulting delay and indecision may not react very favourably on the patient

When discussing a wide and somewhat controversial subject such as this it would seem advisable, so far as is possible, to avoid mention of personal preference or impressions regarding treatment, since these are apt so readily to assume the guise of personal prejudice, which can only tend to complicate and distort the issue I propose, therefore, to present a general review of the treatment of empyema as practised in the Royal Edinburgh Hospital for Sick Children during the past fifteen years By this means it is hoped to obtain a reasonably detached and unbiased view of the situation and to assess the relative merits of the several methods of treatment Before proceeding to details of these methods it is necessary to introduce an explanatory note to the effect that each type of procedure to be described was adopted by choice and not by expediency To appreciate this is of importance since it is common experience that children with empyema are sometimes admitted to hospital in such a low state of vitality that only the most conservative measures dare be employed, and even the minimum of intervention may be attended with grave risk These emergency cases constitute a separate problem, and are not included in the sections concerned with the various methods of treatment, although brief reference is made to them in a later section

During the fifteen-year period 1923 to 1937, inclusive, 363 cases of empyema were received into the wards of the Royal Edinburgh Hospital for Sick Children Fifteen arrived *in extremis* and died within forty-eight hours, these have been omitted, since they were almost certainly beyond the reach of any form of treatment The series under discussion therefore comprises 348 cases, and the various methods of treatment adopted will now be considered In the first place, procedures which may be classed as conservative will be briefly discussed and certain of the more radical measures then considered

* Read in opening a discussion in the Section of Diseases of Children at the Annual Meeting of the British Medical Association, Plymouth 1938

Conservative Treatment

REPEATED ASPIRATION

Drainage of the empyema by means of aspiration of pus from the thorax at frequent intervals was the procedure of choice in sixty cases, or 17 2 per cent of the total series As might be expected, this conservative method was favoured in very young children, one half of those treated in this manner being under 2 years of age The most successful results were obtained where the empyema was small in amount, and in six cases a single paracentesis sufficed to drain the cavity completely Where the effusion was large this mode of treatment could not be regarded as very satisfactory, since the mortality was high and, in the cases which did eventually recover the period of convalescence was often both long and difficult The average length of stay in hospital after the development of empyema in these cases was 8 8 weeks In three of those who survived, open operation had to be resorted to in the end in order to obtain adequate drainage, and it is at least a possibility that the fatalities would have been fewer if similar measures had been adopted with greater frequency and at an earlier stage in the illness

TABLE I—*Showing the Results of Treatment by Repeated Aspiration*

Age	Cases	Recoveries	Deaths	Mortality per cent
Under 2 years	30	10	20	66 6
2–5 years	22	19	3	13 6
5–12 years	8	8	0	Nil
Totals	60	37	23	38 3

In this, as in subsequent tables, the cases have been divided into three age groups, and the very striking variation in the mortality rate according to age will be noted The large number of fatalities which occurred during the period of infancy in this group is somewhat disquieting since the simple procedure of aspiration is apt to be the method of choice in infants and very young children on account of its comparative safety It would seem that in large effusions free and thorough drainage of the pleural sac is difficult to obtain by this method, and the resulting prolonged toxaemia may bring about a fatal issue before such drainage can be accomplished

The infecting organisms isolated in this group were as follows

Pneumococcus	55 cases	Streptococcus	1 case
Staphylococcus	3 "	*B influenzae*	1 "

The various causes of death in the twenty three fatal cases may be detailed thus

Toxaemia	8 cases	Pericarditis	4 cases
Pneumococcal septicaemia	4	Spreading pneumonia	4 "
		Lung abscess	3 "

The causal organism in these fatal cases of empyema was the pneumococcus in twenty cases, the staphylococcus in two cases, and the *B influenzae* in one case

DRAINAGE BY CANNULA ASPIRATION

In fifty-two cases, or 14 9 per cent of the total series, drainage of the empyema by means of a metal cannula was attempted

A short silver cannula was inserted between the ribs into the pleural cavity and retained in position by means of a [illegible] soaked in collodion after the manner described by Mc[illegible] (1930) A rubber tube was then attached to the mouth of the cannula and clipped and a thick pad of wool applied as a dressing By means of a syringe attached to the tube [illegible]

was aspirated through the cannula once or twice daily until the discharge became very scanty whereupon the cannula was removed and the small sinus was allowed to drain openly After each aspiration the usual practice was to inject into the cavity a small quantity of iodoform in liquid paraffin

The results of this method of treatment so far as actual mortality was concerned were more satisfactory than treatment by repeated aspiration but the extremely protracted convalescence associated with this procedure must detract from its success The average length of stay in hospital from the commencement of the cannula drainage was 14 4 weeks a figure which compares unfavourably with other methods of treatment Furthermore in nine cases cannula drainage proved inadequate and after a long illness recourse to open operation became necessary to empty the cavity completely

TABLE II —*Showing the Results of Treatment by Cannula Aspiration*

Age	Cases	Recoveries	Deaths	Mortality per cent
Under 2 years	21	13	8	38 1
2–5 years	20	16	4	20 0
5–12 years	11	11	0	Nil
Totals	52	40	12	23 0

It will be observed from Table II that cannula aspiration proved more successful in empyema of infancy than treatment by repeated aspiration and on this account alone it is certainly worthy of consideration The infecting organism was the pneumococcus in forty nine cases of this group the staphylococcus in two and the streptococcus in one case respectively The causes of death in those who failed to survive were as follows

Toxaemia	7 cases	Spreading pneumonia	1 case
Pericarditis	2	Scarlet fever	1
Pneumococcal septicaemia	1 case		

Of the twelve fatal cases the infection was due to the pneumococcus in eleven the remaining case being one of streptococcal empyema

DRAINAGE BY CLOSED SUCTION

This type of drainage was employed in only fourteen cases of the series and it is therefore difficult to assess its true value in the scheme of treatment For the sake of completeness however it is advisable that reference should be made to it The technique usually consisted in making a small intercostal incision through which a rubber drainage tube was thrust into the pleural cavity Suction was then applied to the tube by means of a Politzer bag or Bunsen bottles, the bag being favoured in the majority of cases

Unfortunately it cannot be claimed that the results of this method of closed suction drainage were encouraging although, as previously stated the number of cases in which it was employed was too small to allow of any definite conclusion being reached regarding its efficacy As was the case with other types of conservative treatment the main difficulty was the maintaining of adequate drainage for a period long enough to ensure thorough emptying of the cavity and in two instances open operation was ultimately required owing to the closed suction having proved quite inadequate to influence the size of the effusion seriously Of the fourteen cases belonging to this group the infection was due to the pneumococcus in ten the staphylococcus in three and the streptococcus in one case The results obtained are shown in Table III

TABLE III —*Showing the Results of Treatment by Closed Suction Drainage*

Age	Cases	Recoveries	Deaths	Mortality per cent
Under 2 years	3	0	3	100 0
2–5 years	7	6	1	14 3
5–12 years	4	4	0	Nil
Totals	14	10	4	28 6

The average length of stay in hospital of the cases treated by closed suction drainage was 8 7 weeks from the beginning of treatment of the empyema Of those who failed to survive the cause of death was stated to be spreading pneumonia (two cases) and pneumococcal septicaemia (two cases)

Radical Treatment

Reference will now be made to those cases of empyema which were subjected to a more radical form of pleural drainage than has so far been described In this group open operation was performed in every instance the adherents of this regime being of the opinion that only by such heroic measures will free and adequate drainage of the pleural cavity be assured in children with empyema When considering this group of cases it is important to bear in mind one significant fact—namely that operation was never undertaken wittingly during the synpneumonic phase of the illness It the diagnosis of empyema was made in the early stages aspiration of the thorax was repeated until the pus became thick and localized and immediate operation on admission to hospital was only performed when the history indicated that the disease was of long standing and exploratory puncture yielded thick pus In the large majority of cases treated by open operation resection of a portion of rib was considered desirable but in a small proportion open drainage was attempted without resorting to rib resection and it will perhaps be of interest to consider these latter cases separately

THORACOTOMY AND OPEN DRAINAGE

This method consisted in making a free incision in the intercostal space incising the pleura and in some cases aiding the evacuation of the pus and fibrin clots by means of a suction apparatus Thereafter a rubber drainage tube was inserted in the opening and the cavity was allowed to drain on to the surface without suction The results obtained in the thirty seven cases in which this mode of treatment was employed are summarized in Table IV

TABLE IV —*Showing the Results of Treatment by Thoracotomy and Open Drainage*

Age	Cases	Recoveries	Deaths	Mortality per cent
Under 2 year	7	1	6	85 7
2–5 years	20	16	4	20 0
5–12 years	10	9	1	10 0
Totals	37	26	1	29 7

It will be noted that the effects of this procedure in empyema of infancy were somewhat disastrous since only one of the cases at this early age survived The major difficulty associated with this method was the maintenance of free drainage from the pleural cavity since the space available between the ribs was rarely found to be

other forms of treatment Furthermore, the period of convalescence was found to be relatively short

The manner of drainage following rib resection did not appear to have any significant influence on the mortality, since a striking similarity was observed in the immediate effects of both closed suction and open drainage

The causal organism was proved to be the pneumococcus in 90 per cent of the cases in the series, the infection in the remainder being due either to the streptococcus or to the staphylococcus The immediate results of treatment were not significantly influenced by the nature of the infecting organism

I wish to record my thanks to the physicians and surgeons of the Royal Edinburgh Hospital for Sick Children for allowing me free access to their case records of empyema

SYNERGY IN EXPERIMENTAL CHEMOTHERAPY OF STAPHYLOCOCCAL INFECTIONS

BY

S. P. DE, M.B.

AND

U. P. BASU, D.Sc.

(From the Bengal Immunity Research Laboratory Calcutta)

Since the observation of Trefouel *et al* (1935) that the therapeutic activity of the hydrochloride of 4-sulphonamido-2 4 diamino-azo benzol is due to the parent compound *p* aminobenzenesulphonamide itself, a considerable number of papers have been published referring to the use of this drug in the treatment of certain human infections of coccal origin in general and that caused by haemolytic streptococci in particular But in spite of these extensive investigations very little work has yet been carried out on the efficacy of this newly discovered drug in staphylococcal infection Of the literature which has special reference to its use in such infection the observations of Troisier *et al* (1937) and Thiers *et al* (1937), as well as that of Frank (1937), need only be mentioned The latter is again significant from the fact that the drug used was *p*-aminobenzenesulphonamide A knowledge of the protective action of this drug against staphylococcal infections seems now to be of considerable interest, as this coccus is also responsible for the development of virulent toxin in human beings

Accordingly a *Staphylococcus aureus* (local) strain was chosen and its toxicity was first ascertained The strain after eighteen hours' culture in broth was noticed to be lethal within twelve hours of infection for white mice, weighing from 10 to 12 grammes (the type of animals used for subsequent experiments), in doses varying from 0 1 to 0 15 c cm (each cubic centimetre containing about 1,000 million organisms)

The Experiments

In a preliminary experiment nine mice were infected intraperitoneally with approximately five minimal lethal doses of the above strain Six of the mice were given within half an hour 7 5 mg of *p* aminobenzenesulphonamide in a sterile aqueous solution by the subcutaneous route In order that no untoward symptoms might develop, as noticed in our previous experiments (De and Basu, 1937), a freshly prepared solution of the drug was always used The remaining three mice received no treatment, and served as controls The animals were then kept under observation, when all the latter animals were found to die within twenty-four hours, and only two of the former (treated) group survived after a period of seventy two hours

Thus the drug seems to possess no specific protective action, and consequently it was considered to be of importance to investigate the relative efficacy of *p* amino benzenesulphonamide and of a potent specific anti staphylococcus serum For this a staphylococcus anti toxic serum containing 600 international units per c cm and a sample of antibacterial serum were selected from the stock, and 50 units of the former and 0 5 c cm of the latter were injected into each animal after dilution with normal saline Forty eight mice of average weight—10 to 12 grammes—were taken and divided into four groups of twelve each

Group A—These were infected intraperitoneally with 0 5 c cm of broth culture of the above local strain The received no treatment, and served as controls

Group B—Each of these animals was given intraperitoneally 50 units of antitoxic and 0 5 c cm of antibacterial serum, diluted with normal saline, and after half an hour was infected with 0 5 c cm of the broth culture

Group C—The animals were first treated with 3 5 mg of *p* aminobenzenesulphonamide in sterile aqueous solution three hours later they were infected with 0 5 c cm of the culture, and 4 mg of the drug was again administered after three hours of this infection

Group D—This group of animals were given a combination of the treatment used in Groups B and C Thus each animal was injected with 3 5 mg of the drug, and after two and a half hours 50 units of the antitoxic and 0 5 c cm of antibacterial serum diluted with normal saline were administered Within half an hour it was infected with 0 5 c cm of the culture, and was again given 4 mg of the sulphonamide after three hours of this infection

All the animals were kept under observation over a period of ninety-six hours, and a post-mortem examination of those which died was made to find out the cause of death The table below gives the results of these investigations

	Hours				Necropsy and Blood Culture Report of the Dead M
	24	48	72	96	
Group A	All dead	—	—	—	Staph aureus

Group D	All alive	All alive	All alive	All alive	—

Average weight of mice 10 to 12 grammes Nature of strain Staph aureus (local) Number of organisms 1 000⁶ (18 hours broth culture) per c cm Infection dose 0 5 c cm

Next, to find out whether *p* aminobenzenesulphonamide possesses any bacteriostatic action *in vitro* upon broth cultures of *Staph aureus*, different amounts of the drug varying from 0 25 to 7 5 mg were added to 10 c cm of the broth cultures and left in an incubator for eight hours No inhibition of growth was noticed in any case

the tubes thereby indicating that the compound even in a concentration of 1 in 1,333 has no bacteriostatic action

Discussion

From the table it is evident that *p* aminobenzene sulphonamide when administered in the doses used in this investigation is capable of prolonging and in some cases of saving the lives of mice infected intraperitoneally with a strain of *Staph aureus* Thus four out of twelve mice (Group C) or 33 per cent were found to survive while 50 per cent were alive up to forty eight hours and 80 per cent up to twenty four hours after the infection A similar treatment with the combined antitoxic and anti bacterial serum (Group B) shows a 25 per cent survival among the infected animals It appears therefore that in the relative doses employed in the present investigation the efficacy of *p* aminobenzenesulphonamide is slightly greater than that of the specific serum The data from Group D again point to the fact that much better therapeutic results may be obtained by a combination of serum and drug as under this condition a 100 per cent survival among the infected animals occurred But as the drug has no bacteriostatic action in culture media it would now be of additional interest to discover the mode of action of the drug *in vivo* particularly as a combined chemotherapeutic and biological treatment has been found to be far more efficacious against staphylococcal infections in mice Work in this direction is already in progress

Conclusion

From the preliminary experiments it would be unwise to make any definite conclusions It may however be said that the subcutaneous administration of *p* amino-benzenesulphonamide is capable of prolonging and in some cases of preserving the lives of mice infected with staphylococci A better protection against staphylococcal infections in mice is obtained by combination of serum and the drug treatment

The second of the series of leaflets issued by the Department of Scientific and Industrial Research describing standard methods for the detection of toxic gases in industry deals with hydrogen cyanide vapour It is pointed out that the danger of the absorption of this gas through the skin is intensified by the presence of sweat or other fluid it may also be introduced into the body by inhalation Slight symptoms of prussic acid poisoning will be noticeable after several hours exposure to a concentration of 1 part in 50 000 while a concentration of 1 part in 500 will be fatal The faint almond like smell is quite easily missed and is therefore useless as a method of detection A sample of the suspected atmosphere should be drawn by a hand exhausting pump through a piece of specially prepared test paper impregnated with Congo red–silver nitrate or benzidine–copper acetate Two charts are supplied with the pamphlet to show the colorimetric reactions with various concentrations and in this way a sufficiently dependable index to the relative safety of the atmosphere can quickly be obtained It is remarked that this test will not indicate the danger in cases in which the oxygen content of a closed chamber is dangerously deficient The price of the leaflet is 5s 6d owing to the high cost of reproduction of the colorimetric charts It is obtainable from H M Stationery Office Kingsway W C 2

DAYLIGHT IN RELATION TO CLIMATE AND HEALTH*

BY

W R G ATKINS, Sc D, F R S

Head of the Department of General Physiology Marine Biological Laboratory Plymouth

Daylight is derived from the radiation of the sun as modified by the interposition of the earth's atmosphere and is perceived by the eye Much of the sun's radiation is not thus perceived but on account of its other effects may be properly considered here

Measurements have been made of the radiation from the sun throughout the whole spectrum by Dr C G Abbot and his co workers at the Observatories of the Smithsonian Institution of Washington When extrapolated to its value outside the earth's atmosphere what is termed the solar constant of radiation as received on a surface set normally to the sun's rays is 1 940 calories a square centimetre a minute the scale of radiation being that of the Smithsonian Institution of 1913 For the sake of uniformity, measurements continue to be given on this scale but the latest results of Abbot and Aldrich lead to a value which is 2 3 per cent less and closer to the Angstrom scale and agrees to one part in a thousand with that of the British National Physical Laboratory (Guild)

The value given for the solar constant of radiation relates to the mean distance of the earth from the sun The earth is closest early in January and furthest away early in July The variation in the square of the solar distance causes a 6 6 per cent increase in January as compared with July The solar constant however undergoes irregular fluctuations and periodic variations which usually amount to about 2 per cent but may be as much as 8 per cent of its mean value These are probably of great importance for the climate of the earth

Abbot Fowle and Aldrich determined the relative energy at various wave-lengths for pure sunlight These results have been extrapolated to give the curve outside the atmosphere and the fraction transmitted and received normally is given in Table I as calculated with the sun vertically overhead at each station Fig 1 has been constructed with the help of these data Wave lengths are

TABLE I—*Solar Energy—Spectrum (Abbot)*

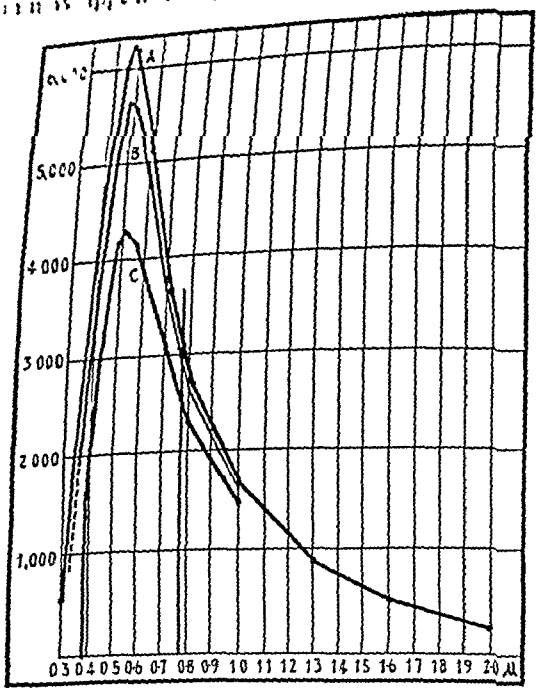

FIG 1.—The ordinates denote arbitrary energy units k_λ, and the abscissae wave lengths. The curves A, B, and C refer, respectively, to outside the atmosphere, Mt. Whitney, and Washington, and relate to zenithal sunlight received at normal incidence. The vertical lines denote the approximate limits of visible radiation.

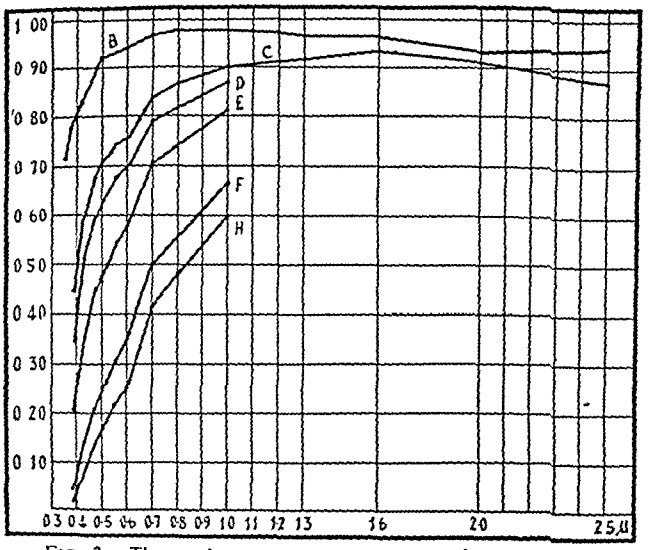

FIG 2.—The ordinates are transmission factors and the abscissae wave lengths. Curve B refers to Mt. Whitney and C to Washington at zero zenith distance. Curves D, E, F, H refer to Washington at zenith distances 40, 60, 75, and 78·5 degrees.

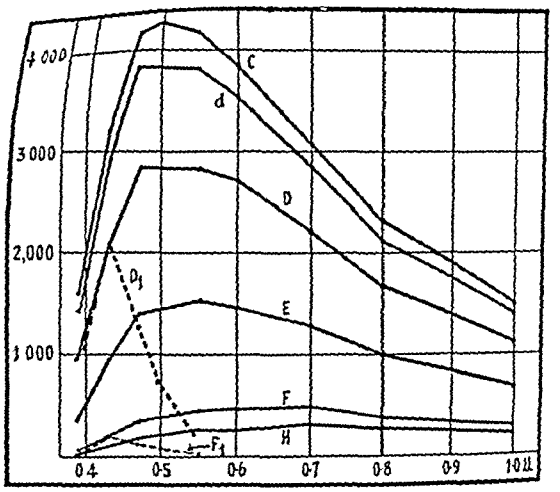

FIG 3.—Values of $k_\lambda f^{\sec z} \cos z$ plotted against wave lengths, for Washington at zenith distances 0, 20, 40, 60, 75, and 78·5 for curves C, d, D, E, F, and H respectively. Dotted lines using factors for potassium photo-electric cell.

In Fig. 3 the arbitrary energy units are taken as ordinates, and k_λ is multiplied by $f^{\sec z}$ to allow for the additional atmospheric distance traversed for different values of z, the zenith distance, the expression is then multiplied by $\cos z$ to correct to incidence upon a horizontal surface. The curves then are $k_\lambda f^{\sec z} \cos z$ and relate to Washington. For Plymouth, latitude 50 degrees, $z = 40$ degrees at noon on April 16 and August 21, $z = 60$ degrees at noon on February 23 and October 18, and $z = 75$ degrees approximately at noon on December 22, at 10 a.m. and 2 p.m. on December 17 to 27 inclusive $z = 78·5$.

It may be seen that in curves A, B, and C, Fig. 1, the maximum lies at 0·47, 0·47, and 0·50 $m\mu$ respectively, and in Fig. 3 the maximum becomes flattened and shifted towards longer wave-lengths, so that in E the maximum is at 0·55 in the green, and lies in the deep red at about 0·7 μ with $z = 75$ degrees. There is therefore in the course of the year a shift in the maximum from red to blue and back again.

The extra-atmospheric solar radiation may be thus divided between the limits 0·3 and 3·0 μ: ultra violet 0·3 to 0·4 μ, 6·6 per cent.; visible 0·4 to 0·76 μ, 52 per cent.; infra-red 0·76 to 3·0 μ, 41·3 per cent. There is radiation of longer wave-length, stopped by glass but transmitted by certain crystals, also radiation of shorter wave-length about which we know little, as its absorption by oxygen in the upper air causes a very abrupt falling off. According to the work of Fabry and Buisson, under the best conditions in the South of France the relative intensities in sunlight are as follows:

TABLE II

In $m\mu$	Relative Intensities
314	22·400
299	1·320
292	22
290	0·02

Diffuse Daylight

As sunlight passes through the atmosphere certain wave-lengths are absorbed and their energy used up in effecting a chemical change, as in the production of ozone from oxygen. Much of it is scattered and reflected. Drop[lets] of w[ater] ... relat[ively] large as compared with the wa[ve] ... *all* wave-lengths ... sun is white, as s[een] ... from a cloud is very ... lengt[h] ... a clo[ud] ... a sea

high according to Aldrich it amounts to 78 per cent as observed from a balloon above a level layer According to calculations made for the whole of the earth s surface no less than 43 per cent of the total incoming solar radiation is reflected by clouds (Simpson)

But scattering by particles small relative to the wavelengths of light affects the radiation inversely as the fourth power of the wave length Thus light of wave length 0 38 μ, which is taken as being the extreme limit of the visible violet is scattered sixteen times as much as light of 0 76 μ, the extreme limit of the visible red So the scattered light some of which reaches the earth, is relatively richer in blue violet and ultra violet as compared with sunlight Thus the unclouded sky looks blue

Measurements of the energy of a source as a whole may be made with electrical instruments having blackened receiving surfaces so that energy of all wave lengths is almost totally absorbed Of these instruments thermopiles are the most widely used, but bolometers, in which a change in resistance is produced by the energy absorbed, have found useful applications By reducing the dimensions and so the heat capacity of both bolometers and thermopiles a high sensitivity and a quick response have been produced By placing the receiving surfaces in a spectrum or by using light filters with due precautions, measurements can be carried out upon portions of the spectrum But for comparative measurements in certain portions of the spectrum photo electric cells have advantages inasmuch as they have an instantaneous response, a high sensitivity and a relatively low cost, coupled with a certain degree of wave length selectivity which can be rendered more highly selective by means of filters Photoelectric cells serve to compare radiation received on a horizontal plane surface from sun plus sky and from sky alone when direct sunlight has been shaded off The cells should be covered with a diffusing disk of opal flashed glass and colour filters if used, should be placed below this The spectral sensitiveness of several types of photocell are shown in Fig 4 (Atkins and Poole) in which is

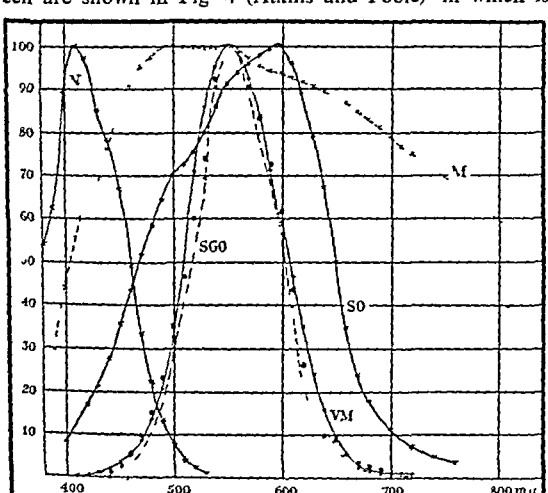

FIG 4—Curve M shows the distribution of energy in mean noon sunlight as a percentage of the maximum and all sensitivities relate to this spectral energy distribution N denotes vacuum sodium cell under opal SO denotes selenium cell under opal SG denotes selenium cell under special green filter as this lies so close to the VM and SGO curves it has been omitted but is denoted by the crossed circles SGO shows the foregoing under opal taking into account that the filter is now traversed by oblique light VM denotes the international relative visibility factor of the eye as for mean noon sunlight

also shown the spectral sensitivity curve for the light adapted human eye This is not very different from that of the selenium rectifier photo cell and may be closely matched by the latter under a special greenish filter The sodium cell on the other hand, is most sensitive in sunlight—around 0 41 μ where the eye is of low sensitivity It has been shown however that for mixed sunlight, white clouds and blue sky the ratio of the readings of a sodium to those of a selenium cell remains nearly constant over a wide range of intensities, but atmospheric conditions exist under which a considerable divergence becomes manifest

The difference between sunlight and sky light may be seen from the following At noon on May 26 in Dublin the blue light from sunlight was only 1 28 times as intense as that from the sky That for yellow was 3 4 times and for red 6 2 times as intense In the anti rachitic ultra violet of sunlight (namely from 313 mμ to the extreme limit received, about 297 mμ—frequently longer and rarely shorter in appreciable amount) Dorno has shown that the radiation from the whole sky exceeds that from the sun unless the altitude of the latter exceeds *45 degrees*

The Daylight Factor

When considering diffuse daylight the most useful index of the illumination in a room is the daylight factor It was shown by Paterson and Walsh that in absence of sunlight the illumination at a point inside a building bears a very nearly constant ratio to the illumination at a point outside the receiving surface being set horizontally in each case This percentage ratio is termed the daylight factor Owing to the great intensity of sky light situations with a factor of 1 per cent are adequately lighted for reading throughout the greater part of the day even immediately inside large north windows the daylight factor is only about 6 to 16 per cent Photo electric cells serve well for such determinations if the sun is shining its rays should be screened off from the open air photometer or a correction be applied by the determination of the sunlight/sky light ratio

It is obvious that a person exposed in the open for six minutes in the middle of the day will receive far more light than when inside for ten hours with a 1 per cent daylight factor It is therefore uneconomical to fit glass transparent to ultra violet light in windows other than those that receive direct sunlight, save in buildings specially constructed to admit a far larger proportion of sky light than is customary

Daily and Seasonal Changes in Light

As the altitude of the sun increases, the illumination received upon a horizontal surface rises from about 700 metre candles (lux) at sunrise to about 90 kilolux for 45 degrees and 145 kilolux for 90 degrees altitude with a clear sky (Atkins Ball and Poole) The illumination at various solar altitudes is shown in Fig 5 as obtained by using a selenium rectifier cell, corrected for curvature of the intensity–current relation The cell was standardized in artificial mean noon sunlight and as previously shown its scale is fairly close to that of the eye With the sun at 90 degrees its rays are less scattered in reaching the earth and its incidence is normal With the selenium cell sensitive throughout the spectrum the ratio of zenithal sunlight to sky light is usually between 4 and 8 whereas with a sodium cell sensitive only to the blue end of the spectrum the sun/sky ratio is about 2 to 4 The upper limits are far beyond what is found in England,

where the sun reaches an altitude of about 63 degrees in summer Owing to the variation in the scattering of light of different wave-lengths the daily and seasonal changes are not the same for different portions of the spectrum

An elaborate study of the alterations in the composition of daylight has been made by Ornstein, Eymers, Vermeulen, and Postma, measuring the energy in various narrow wave-length bands under different atmospheric conditions By means of a sodium cell daily records

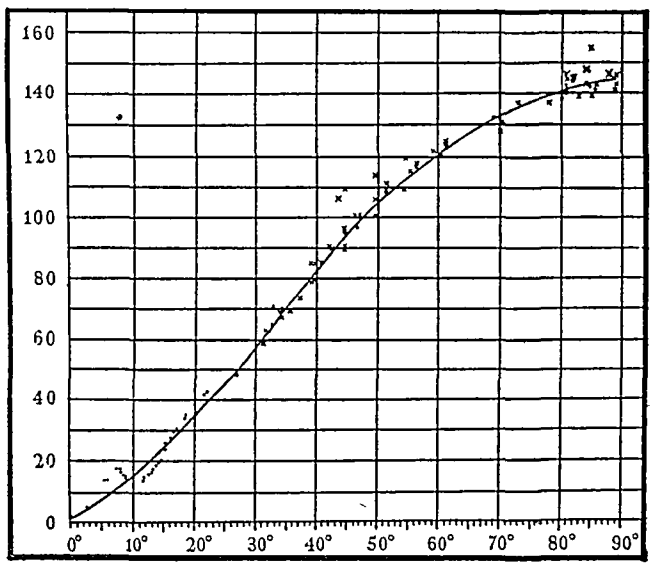

FIG 5—Vertical illumination at Colombo for different altitudes of the sun, with clear sky or but few clouds The ordinates denote vertical illumination in kilolux

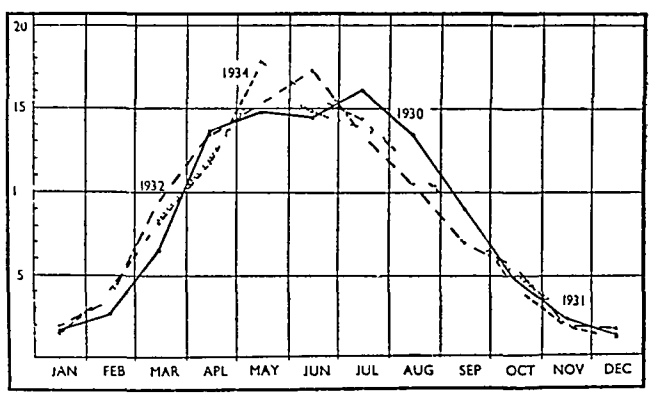

FIG 6—The ordinates denote percentages of the light received in each year, as measured in kilolux hours

have been obtained by the author for the last eight years at Plymouth, using a Cambridge Instrument Company 'thread recorder" The records are of the blue-violet end, around 0 41μ, and by measuring the areas of the daily curves the total amount of light received has been found, expressed in kilolux-hours—namely, that received when an illumination of one kilolux persists for one hour The daily illumination integral varied from 14 5 to 1,323 kilolux-hours, and the monthly means from 45 6 in December, 1934, to 781 in July, 1930, that year being exceptionally bright For it the daily average was 414 kilolux-hours, but five other years averaged 309 In Plymouth the six summer months receive from three-quarters to four-fifths of the annual daylight, of this the brightest month—May, June, or July—receives 15 to 18 per cent and December 1 5 per cent (see Fig 6)

The Physiological Effects of Daylight

The effects may be classified primarily under two headings

(*a*) The Purely Photo-Chemical, in which the resultant action is proportional to the energy of the effective wave length absorbed —Thus when ergosterol is irradiated and thereby converted into vitamin D the action is purely chemical, and exact proportionality exists unless too great an intensity or time of exposure introduces a secondary destructive action

(*b*) The Physiological Stimulation of Living Cells—In this the effect decreases with time, which is a perfectly general result from the application of any stimulus Thus the eye when exposed to bright light reduces its sensitivity first of all by decreasing the pupillary diameter This, however, only decreases the area of the pupil to about one-fourth or one-fifth, approximately the variation between the illumination on a horizontal surface from full daylight and that from sky alone when the sun is obscured by a small cloud There is then a slower diminution in sensitivity due to an alteration in the quantity of unbleached visual purple and to the variation in nervous response A similar decrease in sensitivity is observed when the skin is subjected to the extreme solar ultra-violet, which appears to be almost the same in range as the antirachitic region

The action of radiation takes place only where it is absorbed, so the effect of ultra-violet is primarily quite superficial, but a secondary result, such as increased calcification, may be found when the blood stream has carried away the activated products

The major successes of light therapy appear to be the treatment of rickets, including tetany, of lupus and "surgical" tuberculosis, also of certain types of wound and ulcer But on the healthy population the mental effect of bright daylight is so cheering that one is compelled to regard it as of significance for the body also, especially when—as usual in our land—it is a very variable stimulus

In the treatment of tuberculosis and of wounds it appears that the whole solar radiation is effective, and not the ultra-violet only The longer wave lengths penetrate more deeply, the maximum penetration being that of the deep red and short infra red, about 0 7 to 1 4 μ The longer infra-red is so heavily absorbed by water that its penetration is less and its causation of superficial burning is greater, though erythema is produced by the ultra-violet below 313 mμ without contemporaneous sensation

I am indebted to my brother, Lieutenant Colonel R R G Atkins, R A M C, for a discussion on heat stroke, commonly though less correctly termed sunstroke Its incidence is mainly confined to tropical and semi-tropical regions where the small amount of water vapour in the atmosphere allows much infra red to penetrate and where a dry earth, especially a sandy or rocky situation, is heated by the sun, were the ground moist much of the solar energy would be expended in evaporation Thus at Singapore, with the sun vertically overhead twice a year, heat-stroke is far less common than in the North-West Provinces of India and in Mesopotamia Thick turbans and sun helmets—especially those provided with thin aluminium foil as recommended by Crowe—serve to protect the head, but may fail unless whole skin is acting efficiently as an evaporating radiating surface There are descriptions in Lawrence's *Seven Pillars of Wisdom* of the extreme conditions

unmitigated sunlight, baked reflecting surfaces and hot winds in which well trained men can yet endure great muscular exertion and fatigue But they eat sparingly and drink water of varying degrees of brackishness which provides against salt depletion Moreover through long exposure their bodies are provided with larger skin capillaries than in the shielded bodies of Europeans In erythema the surface capillaries become dilated, but with constant exposure, as on faces and hands they become larger No one can see the splendid general tone of the skin of those who take even short regular sun baths on the sea front in Plymouth without realizing that an unsunned skin is unnatural and may consequently be expected to fail when extreme calls are made on its heat-regulating powers The function of the skin in heat regulation may be considered as of prime importance to health and we need probably look no further than a pure heat effect for the stimulation of the powers of the body resulting from exposure to sunlight, which is capable of raising the tissues to well above their normal temperature to a depth of over one centimetre as shown by Sonne also by Loewy and Dorno

Figs 4 5 and 6 are reprinted from the *Proceedings of the Royal Society* by permission

Clinical Memoranda

Volvulus of Pelvic Colon in a Young Person An Unusual Complication of Appendicectomy

Volvulus of the pelvic colon rarely occurs in young people L E C Norbury in an article on left iliac fossa pain describes a personal case of a girl aged 20 in whom the gut twisted a second time almost exactly a year after the first occurrence At her second operation the pelvic loop was resected after Paul's method A definite degree of megacolon was present Other cases are recorded complicating pregnancy and labour including Jellinghaus's case following Caesarean section, though the age of the patient was 37 Foote records volvulus of the pelvic colon in a mentally deficient male aged 22 My case is of interest not only from the point of view of the youth of the patient but also because it presented itself as an acute obstruction on the ninth day after an otherwise uncomplicated appendicectomy

Four months ago a domestic servant aged 20 was admitted and operated upon for an attack of acute appendicitis typical except for the lack of the initial central abdominal pain Through a lower right paramedian incision an acutely inflamed appendix stiffened with oedema and covered with lymph was removed The appendix was unperforated and the abdomen was closed without drainage and without exploration of any other viscus Convalescence was normal in every way until the ninth day—that is thirty six hours before her proposed discharge from hospital In the evening of that day she was seized with acute lower abdominal pain and had vomited some four times before I saw her five hours after the onset of the complication She was obviously ill and distressed with a subnormal temperature and a pulse rate of 116 Her tongue was furred and she had passed no flatus since the onset of the pain though the morning bowel action had been regular since operation The abdomen was tensely distended this seemed to be most marked beneath the incision which had by now healed The rectum was empty and even somewhat ballooned

Upon a diagnosis of acute intestinal obstruction probably from rupture of the deeper layers of the wound she was taken to the theatre and the original incision reopened It was soundly healed and the cause of the obstruction presented itself as the familiarly large loop of sigmoid colon The bowel was decompressed with a trocar and cannula and a twist of 180 degrees undone The attachment of the mesocolon did not appear unduly narrow and no fixation was attempted A long rectal tube was passed up to the splenic flexure and the peritoneum closed around a pelvic drain owing to the fact that free fluid was present in the peritoneal cavity The bowels acted copiously on the table and regularly after operation Peritoneal drainage was rather more copious than was expected and the peritoneal infection prevented an uninterrupted recovery The patient was transferred to the country eleven days after her second operation and she has remained symptom free since then

A radiograph of a barium enema taken after convalescence shows that the rectum and colon up to the splenic flexure are rather wider in calibre than normal and the haustrations are less well marked A condition of megacolon is not present

I am indebted to Mr Eric Crook on whose behalf I treated the case for his help in the after care following the second operation and for his permission to submit these notes

Cervical Pregnancy

I would like to bring to notice two recent cases of cervical pregnancy on account of their rarity

Case 1—On December 11 1937 a patient was admitted with a history of four months pregnancy She was in a state of toxaemia with face drawn and haggard tongue coated brown and cracked a pulse of 140 and a temperature of 103 The bladder was distended and the urine on removal was found to be fetid and dark in colour containing traces of albumin blood and pus The level of the uterus was to just below the umbilicus and she was having violent contractions Examination showed a globular swelling, pressing outside the vagina and obliterating it A small dimple was visible about its centre representing the cervix The appearance was that of a typical haematoma A longitudinal incision was made over the cervix and a four months foetus and placenta were removed The placenta was found partly in the bulging cervix and partly in the uterus and the whole foetus was in the cervix The patient developed white leg, was treated with prontosil and sulphonamide P and left the hospital well

Case 2—On December 21 1937 this patient was admitted with a history of ten months pregnancy She was toxic and her tongue was furred her pulse was 130 and temperature 102 Her bladder was distended and the urine on removal contained pus On examination a large contracting uterus was found and in place of a cervix a globular mass was felt but no opening was apparent With a speculum a small dimple was seen in the centre of the swelling. A Caesarean section was performed The walls of the uterus were dark in colour thickened and almost fibrous in texture there was no bleeding on cutting into the uterus A large over mature dead child was removed The mucous membrane lining the uterus was thick and oedematous and the membranes had to be peeled off The placenta dark and sodden was found in the distended cervix down below The uterus contracted fairly well but owing to the septic condition of the walls of the uterus it was considered advisable to perform hysterectomy This was done An opening was made in the lower dilated portion of the cervix and a tube was left in position draining into the vagina The patient was treated with prontosil and sulphonamide P and after a fairly stormy convalescence returned home well

Reviews

THE HYPOTHALAMUS

The Hypothalamus Morphological Functional Clinical and Surgical Aspects By W E Le Gros Clark D Sc, F R C S, F R S, John Beattie M D, D Sc George Riddoch M D, F R C P and Norman M Dott, F R C S Ed Published for the William Ramsay Henderson Trust (Pp 212, over 100 illustrations 12s 6d) Edinburgh Oliver and Boyd 1938

This splendid monograph is based upon four lectures, now elaborated and brought up to date, which were delivered in 1936 under the auspices of the William Ramsay Henderson Trust Each of the lecturers in his own sphere has long made a special study of the anatomical, physiological, clinical, or surgical problems presented by the hypothalamus—that tiny fraction (less than 1/250th) of the brain which is now known to exercise so profound an influence over the most fundamental of our bodily and psychic activities There is surprisingly little overlapping in the lectures as now published, and when repetition has been unavoidable the different angle of approach merely corroborates some earlier observation and helps the reader to fix important facts in his memory without the tedium inevitably produced by simple reiteration Furthermore, no attempt has been made to write a *big* book, the literary style is admirable throughout, for without wasting words the information gleaned from personal experience has been clearly set forth, and the involved problems have been referred to with the modesty and wisdom which characterize only those who appreciate the limitations of their knowledge

Professor Le Gros Clark deals with the histological structure of the mammalian hypothalamus, and discusses the comparative anatomy of these parts in the lower vertebrates, finally contrasting the features in the lower forms with those found in the human brain An extremely interesting section of this lecture deals with the rich blood supply to the hypothalamus, and the theory that the hypophysis may be functionally linked to the hypothalamus by a hypophyseo-portal system of blood vessels is thoroughly considered, though it seems to be impossible at present to arrive at a definite conclusion on this matter

The functional aspects of the hypothalamus are reviewed by Dr John Beattie, who puts forward his reasons for regarding the hypothalamus as having a dual mechanism, one part activating the parasympathetic and the other the sympathetic portion of the autonomic system, the two parts being antagonistic yet controlled so as to maintain a constant internal environment within the body As he justly remarks, if the complicated structure of the hypothalamus, with its numerous centres and tracts, does not seem to harmonize with such an apparently simple dual mechanism, then the only alternative is to regard the hypothalamus as a single unit, comparable to the cerebral cortex in its method of receiving, selecting, and transmitting nerve impulses to and from other parts of the nervous system It is difficult to decide which of these two conceptions approximates more closely to the truth, but the theory of the dual mechanism offers a satisfactory explanation for the response of the body to cold and heat

Dr Beattie discusses For the relationship of the hypophysis to the hypothalamus other nervous pathway connecting the two is regarded as more probable, the possibility that chemical substances pass more or less directly to the hypophysis from the hypothalamus cannot be denied, but the balance of evidence at the moment seems to be against a direct connexion by a system of "portal" blood vessels

The lectures by Dr George Riddoch and Mr Norman Dott on the clinical and the surgical aspects of hypothalamic disorders are full of interest, not only to the neurologist but to the general physician as well Every thoughtful surgeon must also find that these clinical records throw fresh light upon many of the yet unsolved problems of visceral disease, such as gastric ulceration, the sequelae of cerebral injury, and certain metabolic upsets In addition to a masterly description of the clinical manifestations of derangements of the hypothalamus, Dr Riddoch gives us a very clear account of an astonishingly large number of pathological processes which may be responsible

Mr Dott's contribution is a remarkable testimony to the value of surgery as an instrument of research, and a brilliant exposition of how much may be gained from the painstaking study of a comparatively small group of patients The monograph is beautifully illustrated, Mr Chesterman's photomicrographs and Miss Thom's drawings being particularly praiseworthy, and a full bibliography puts the finishing touch to a classical contribution to medical literature

BOOKS ON OBSTETRICS

A Manual of Obstetrics By Thomas Watts Eden M D, C M F R C P, F R C S Ed, F C O G and Eardley Holland M D B S, F R C S, F C O G Eighth edition (Pp 765 395 figures, 12 plates 24s) London J and A Churchill 1937

Obstetrics By Gibbon Fitzgibbon, M D, M Ch, B A O, F R C P I F C O G (Pp 484 167 figures 16s) Dublin Browne and Nolan 1937

Essentials of Obstetrical and Gynecological Pathology with Clinical Correlation By Marion Douglass, M D, F A C S, and Robert L Faulkner M D (Pp 187 148 illustrations 21s net) London Henry Kimpton 1938

A Textbook of Midwifery for Students and Practitioners By R W Johnstone C B E, M D F R C S Ed, F C O G Ninth edition (Pp 483 282 illustrations 18s net) London Adam and Charles Black 1937

This latest edition of Eden and Holland's manual contains several additional features of interest The general arrangement is the same as before, but many individual chapters have been rewritten, including those on the anaemias of pregnancy, pyelitis, and abortion There are many new illustrations, and though in some aspects, such as the chemotherapy of puerperal sepsis, even the most modern textbook becomes out of date almost coincidently with publication, the latest advances are described in the necessary detail The mature experience and judgment of the authors are evident everywhere throughout the book which adequately continues its original high standard

Written by one of the Rotunda's most distinguished Masters, Gibbon Fitzgibbon's *Obstetrics* provides in a concise and extremely readable form the main teaching of the Dublin School It has been written mainly for the medical student and general practitioner, and few manuals on the subject are so adequately designed to provide the balance of theoretical and practical knowledge required for this combination Many of the author's views are undoubtedly controversial, such as his advocacy of the induction of premature labour in primigravidae as the ideal treatment for disproportion, and his recommendation of pubiotomy for impacted brow presentations, etc It is also a little strange that in an authoritative treatise as this ergometrine is not even mentioned while radiographic pelvimetry is dismissed in a few lines The

of Willett's forceps is only mentioned to indicate that the author has no personal experience of the method a somewhat disarming admission in view of its almost universal adoption in this country at least With these exceptions however the book is a handy and concise compression of modern obstetric teaching and provides a happy medium between the better known but generally more cumbrous volumes and the usually too short synopses now in general use

Essentials of Obstetrical and Gynecological Pathology is the latest of the recent spate of textbooks devoted to obstetric and gynaecological pathology It differs however from most similar publications in that it is addressed particularly to the medical student and to the practitioner studying the problem for the first time In addition there is a considerable amount of space devoted to clinical diagnosis and treatment Each disease is thus described in all its aspects and the result is a very useful summary of modern gynaecological teaching The compression of so much matter into so short a space has made the book a somewhat elementary and therefore dogmatic one but this adds to rather than detracts from its original purpose The illustrations are simple and appropriate but as in so many recent American textbooks the English is so transatlantic in style that it is often difficult to understand without very careful perusal

The new edition of Professor Johnstone's *Textbook of Midwifery* maintains the high standard of its predecessors The general arrangement is the same with occasional additions of modern interest such as the recommendation of Calvert's urea range test in toxaemia in place of the glcbulin test the use of sulphonamide in puerperal sepsis etc One or two fallacies are perpetuated—for example the value of anti streptococcal serum—but the book generally adopts throughout the healthy conservatism characteristic of the best practice of midwifery

TINNED FOOD

Canned Foods and the Canning Industry By F Huntly Woodcock and W R Lewis B Sc With a foreword by George W Cadbury M A (Pp 119 23 illustrations 7s 6d net) London Sir Isaac Pitman and Sons 1938

The principles of and procedure for the canning of foods with a view to their preservation are included in courses at technical institutes where classes are held for the study of matters of this kind The methods used should be of interest also to manufacturers and purveyors to food inspectors in the discharge of their duty and to the general public who are the appreciative consumers of the finished product All such will find in Mr Huntly Woodcock's book an informative account of the canning industry which beginning with a note on Nicholas Appert the inventor near the close of the eighteenth century proceeds thereafter to exhibit in appropriate order how the tin plate containers are made filled and tested whence in the world the various foodstuffs originate and how they are graded prepared and finally processed in order that they may keep It is stated that traces of iron or tin derived by the foods from the tin plate of the cans are for practical purposes negligible The claim that ptomaine poisoning by canned foods is apocryphal will at once be conceded by the medical reader who will also recognize as entirely reasonable the author's pronouncement that the carefully selected cleaned and processed canned article is on the whole less likely than the ordinary run of more casually prepared foods to contain the principal infective agent in bacterial food poisoning—namely Salmonella As regards botulism it is quoted aptly enough that the only authentic outbreak in this country—that at Lochmaree in 1922—was traced to a meat product packed in glass not in a tin plate can Nevertheless since people are still so prone to suspicion it is recommended that distributors of canned foods should insure themselves against third party claims in respect of alleged food poisoning

A MANUAL OF HYGIENE

Hygiene By J R Currie M A Oxon M D Glas D P H Birm F R C P Ed Manual of Public Health (Pp 324 3- figures 15 tables 10s net postage 6d) Edinburgh E and S Livingstone 1938

Seeing that the great majority of medical students eventually undertake general practice and recognizing the increasing importance in such practice of a wide and detailed knowledge of personal domestic and industrial hygiene and of the extensive provision now made for attending to the public health there is ample room for a textbook dealing with such subjects from the point of view indicated rather than from that of a member of the public health service itself or from that of a candidate for a diploma with a view to entering that service Such a textbook is admirably provided by Dr J R Currie Henry Mechan Professor of Public Health in the University of Glasgow in a volume entitled simply *Hygiene* The author evidently intends it to be of use to the student in giving him the essentials of knowledge of the field which it covers in enabling him to meet satisfactorily any questions on these matters which he is liable to be asked in his final examinations and in aiding him to confront and understand many of the common duties and situations with which he will be concerned immediately he enters upon practice The details of public health law and administration are not dealt with but the book is informative and adequate in guidance on practical points the facts relating to which are not easy for a busy practitioner always to have in mind

The scope and scheme of the book may be indicated by some of its main chapter headings perhaps best arranged in three groups (1) inheritance maternity and child welfare school hygiene industrial hygiene social insurance (2) food ventilation heating lighting water supply waste disposal housing (3) personal hygiene infection and prevention infestation community diseases The proportion observed is judicious the arrangement easy of reference and the presentation interesting though at times perhaps too concentrated Opinions expressed on such subjects as eugenics and a maternity service are moderate wise and in conformity with general medical opinion A few detailed points may be noted In dealing with national health insurance the differences between Scottish and English requirements with regard to records especially might well be mentioned the disciplinary machinery as affecting practitioners might be somewhat more fully set out and the method of remuneration is not quite accurately stated when it is said to be at the rate of 9s per annum for each person on his list An exact understanding on these points is of real value to the young practitioner if misconceptions which sometimes give rise to trouble are to be avoided In the section on mental defect it might be emphasized that there is a continuous line of variability in mental power from the idiot up to the normal person and the reference to dull and backward children might be brought into closer association with this chapter In the section on vital statistics a description of fertility rates and some discussion of the

population question would be helpful The statement in reference to domiciliary attendance on public assistance patients that 'in large and densely populated cities with much aggregation of poor persons the only workable way' is by the appointment of whole-time district medical officers should be reconsidered, and experience of providing this by the "panel" or "open choice" method is now sufficient for its effects and advantages to be noted These are all minor points and are only mentioned so that Professor Currie may consider whether he would wish to make any alterations or amplifications such as those indicated if, as is quite probable, his book becomes one of the recognized textbooks on the subject for medical students and practitioners

ARTHRITIS, FIBROSITIS, AND GOUT

Arthritis Fibrositis and Gout A Handbook for the General Practitioner By C W Buckley M D, F R C P (Pp 153, 24 figures 7s 6d net) London H K Lewis and Co 1938

Dr Buckley has assembled his ripe experience of the 'rheumatic diseases" into a small volume founded on a series of postgraduate lectures For the general practitioner this book could hardly be bettered It is concise, practical, readable, and, above all, sane and well balanced Rheumatoid arthritis, chronic villous arthritis, osteoarthritis, spondylitis, fibrositis, and gout are dealt with, acute rheumatism and the specific arthritides being definitely excluded

The reader will find in this book a fair discussion of all the modern therapeutic methods, exposing the unguarded enthusiasm of certain pioneers who are apt to push a new treatment in these diseases, which are all too common and all too difficult to treat, because they see therein personal opportunity Thus, in the discussion of gold treatment stress is laid on the real risks and the precautions which ought to be taken to avoid them, while welcoming the very encouraging advance which has been made through these methods in the treatment of rheumatoid arthritis With the success of vaccines, which are all too easy to administer, Dr Buckley from his ripe experience is not very much impressed The best he can find to say about this very popular method of therapy is that vaccines will sometimes do good, and if the dose is small there is little or no risk As might be expected, the chapters on spondylitis are excellent and authoritative, for to this disease Dr Buckley has devoted great attention in recent years His book is a really valuable summary of present knowledge and is to be thoroughly recommended

Notes on Books

The *Life and Letters of Fielding H Garrison* is published by the Medico-Historical Press, Boston During his busy life of threescore years and five Fielding Garrison, author of the wonderfully complete and accurate *Introduction to the History of Medicine* was an official librarian in the Army Medical Library, Washington, from 1891 to 1930, where he carried on the tradition of J S Billings and Robert Fletcher and for the last five years of his life at the Welch Memorial Library Baltimore His colleagues have paid many tributes to his labours, and now Dr S R KAGAN of Roxbury, Massachusetts, has brought out this account of him as medical historian, bibliographer and biographer, as a man and as a cultivated musician a mathematician and a physicist More than this Dr Kagan has brought together the numerous tributes to this versatile but modest and very sensitive personality, and collected here many of the letters he wrote, especially to Dr E C Streeter, Dr F R Packard, Editor of the *Annals of Medical History* and Sir D'Arcy Power He was a great correspondent, and thus made friends whom he never saw, such as Sir Clifford Allbutt Professor Charles Singer, who had corresponded with him for sixteen years before they met in 1930 when Garrison paid his only visit to Europe, described him as "the most modest and retiring of scholars, but at the same time an acute and searching critic" It was, perhaps, characteristic of him that he omitted from the great Index Catalogue of the Army Medical Library many of his own valuable writings

The London Regional Advisory Council for Juvenile Employment appointed by the Minister of Labour has issued a revised edition of the *Guide to Employment for Boys and Girls in Greater London* first published in 1928 It should prove a useful handbook for all who are concerned with the vocational guidance of young persons, though it should not be regarded as a substitute for personal advice, which can be obtained from the juvenile advisory committees attached to employment exchanges and the juvenile employment committees established by local education authorities The Guide is published by H M Stationery Office, price 2s

Well within the intellectual and financial compass of all *A Guide to Human Parasitology*, by Professor D B BLACKLOCK and Dr T SOUTHWELL, is probably the best elementary textbook on the subject A third edition has now been published by H K Lewis and Co at 12s 6d Supplemented by a course of practical work it will provide a sound base from which the student may advance confidently to intelligent practice or future study in the field of disease caused by animal parasites

Preparations and Appliances

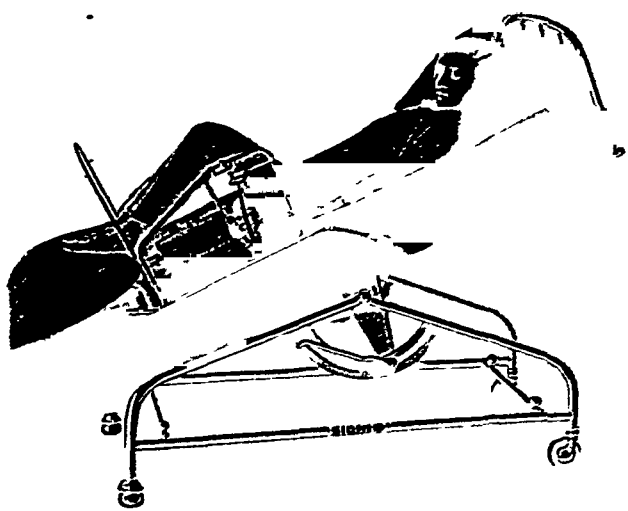
LACTOFLAVINE

Lactoflavine B D H (British Drug Houses Ltd) is a synthetic pigment identical with the naturally occurring substance Its formula is pyrimidine azine benzene dimethyl *d* ribose

Lactoflavine (vitamin B) occurs naturally associated with vitamin B (the rat anti dermatitis factor) and the pellagra-preventing factor, which is believed to be nicotinic acid In the body lactoflavine is phosphorylated and the compound is combined with a protein to form Warburg's yellow respiratory pigment The latter appears to be an essential portion of the respiratory mechanism of cells The effects of lactoflavine deficiency are uncertain, but it is believed to cause cataract and neural degeneration

The manufacturers suggest the trial of the synthetic product as an adjuvant in various forms of anaemia, cataract, and certain cyanotic conditions It is only a few years since vitamin B$_2$ was shown to be lactoflavine and the speed with which the synthesis of the latter has been achieved is remarkable This synthesis provides a supply adequate for clinical trials and we may reasonably hope for a rapid increase in knowledge regarding its therapeutic value

A BREAST RELIEVER PAD



When a flushed and tender breast has to be evacuated during the puerperium the process is likely to be painful even with the modern type of breast pump To make things easier a special sponge filled rubber ring has been devised to fit over the nipple between the breast pump and the breast The makers, Messrs J G Franklin and Co, india-rubber manufacturers, 15, Colvestone Crescent London E, claim that their product the simplic patent breast relief pad' has proved on clinical testing to supply great comfort and relief The retail price is 2s 6d

USES OF A NEW TILTABLE BED WITH DONKEY

Dr F C EVE FRCP (Hull) writes

The illustration shows without verbal description the ease with which an effective and desirable tilt can be attained and clamped The *feet down* position is used in heart cases pneumonia asthma the Fowler position and in anasarca with puncture drainage (highly effective) the *head down* position in shock spinal anaesthesia bronchiectasis parturient haemorrhage to stop death rattle and to prevent deglutition pneumonia by the patient swallowing uphill (*Clin J* October 1937) Artificial respiration by my rocking method may be maintained for a few days by rocking the bed through 80 degrees a dozen times a minute and has saved life in diphtheritic paralysis of the diaphragm (*Lancet* 1933 2 740)

The tilting bed would be useless without the adjustable donkey which tied as it is to the bed frame prevents the tilted patient from slipping down at all Bedsores are avoided because the weight of the tilted patient is taken from the sacrum to the thighs Thigh length varies greatly hence the height of the arch of the inverted hammock is made variable by merely slackening two lateral straps The bare hot bottle

is placed under the arch of the donkey where it cannot touch the patient and whence the hot air circulates round the legs The donkey is also useful in an ordinary flat bed where it entirely prevents the usual slipping and hoisting of a propped up patient For phlebitis and swollen legs the donkey is reversed to encourage return circulation by an effective slope

In the post operative Fowler position the drainage tilt (intermittent if desired) is attained with a straight spine and a flat abdomen instead of the usual bent spine and bulging abdomen conducive to ileus and stretched incision This is an important gain A new lateral Fowler position is made possible (knees on mattress thighs on a pillow on the donkey) for dependent drainage after chest or kidney operations

The heels do not press on bed or donkey thus avoiding bedsore or the common heel pain An arched rod takes the pressure of the bedclothes The donkey—used on any bed or couch—produces an extraordinary feeling of complete relaxation due to its straightening the lumbar spine and semi flexing the three great leg joints

Gravity is the old enemy of the nurse and her toneless patient in bed these two devices are designed to convert gravity into a friend Experience has convinced me that they open up to the ingenious clinician and surgeon new opportunities of affording comfort and cure or of saving life

The manufacturers (Messrs Siddall & Hilton Sowerby Bridge Yorkshire) have been at pains to meet clinical requirements at low cost A fuller paper with illustrative cases is pending

USE OF A STRETCHER AS A SPLINT

Mr D G DUFF FRCSEd (Denbighshire Infirmary) writes

Under the stimulus of a letter describing their requirements from Dr C Paget Lapage chairman of the First Aid Committee of Mountaineering Associations I have worked out a stretcher system which may find a wider applicability in first aid work—for example in mines and in the Services It will be realized that in rock climbing and mountaineering methods of first aid treatment and transport are very fully tested A cross bar of mild steel (three quarters of an inch wide by a quarter of an inch thick) slides over the foot ends of the poles of a wooden stretcher (telescopic handled or standard) fixing in position by a strong screw through each pole at the site of an existing metal band This cross bar will be recognized as a modification of the usual suspension bar used for a Thomas splint It stands only five inches above the canvas and projects three inches beyond the foot of the stretcher It has two screw clamps on each side which can firmly grip the notched lower end of a Thomas splint previously fitted to the right or left leg of the patient A second light bar across at

canvas level gives a support under the foot of an uninjured limb

A twenty inch broad canvas band fixed to the stretcher pole at one side passes over the patient's pelvis abdomen and chest and straps to the opposite pole so as to secure him firmly a central lacing allowing the necessary expansion for stout patients Shoulder straps fixed to the canvas behind come over the shoulders to fix like braces to the canvas belt in front A broad band passing through eyelets in the canvas and normally in use to close the opening of the pillow pocket is used to secure the patient's head to the canvas in cases of cervical spine injury

A patient so splinted to the stretcher may be carried on a slope raised or lowered in a vertical position by ropes tied to the stretcher the Thomas splint being used for him to sit in as in a walking calliper whether there is a fractured leg (the usual injury) or not The patient is thus secured from painful movement even in the case of fractured spine chest wall etc during his transport from the site of accident no matter how difficult of access until his reception in a hospital bed The stretcher and apparatus illustrated have been cheaply made by local craftsmen It is 6 feet 3 inches long and handles extend 20 inches A criticism is of course in its reliance on the Thomas splint the use of which is not yet normally taught by ambulance associations It is hoped however that the apparatus described will help to alleviate physical pain and nervous shock

EFFICIENCY OF STEAM STERILIZERS

BY

H. R. RISHWORTH, F.R.C.S.

District Medical Officer, Indian State Railways Late Honorary Surgeon, St George's European General Hospital Bombay

Experiments recently published in the *British Medical Journal* (Hayes, 1937) indicate that surgical sterilizers may be dangerously inefficient Stress has been rightly laid on the mode of packing and the nature of the material sterilized It seems worth while inquiring, however, whether the usual method of pressure-gauge control and the system of timing the period of sterilization now used are satisfactory in these instruments Nearly all the published tables giving the properties of saturated steam have been constructed on empirical formulae based on the researches of Regnault on pure steam Table I (Low 1931) gives the figures for pure saturated steam at pressures and temperatures within a range applicable to the subject under discussion

TABLE I

P (lb)	PG (lb)	T (F)	T (C)
20	5 3	227 9°	108 8°
24	9 3	237 8°	114°
25	10 3	240°	115 5°
26	11 3	242 2°	116°
27	12 3	244 3°	118°
28	13 3	246 3°	119°
30	15 3	250 3°	121 5°

P = Absolute pressure PG = Gauge pressure T = Temperature
Absolute pressure = gauge pressure + atmospheric pressure (14 7 lb per sq in)

It is certain, however, that in the majority of sterilizers in use to-day we are not dealing with pure saturated steam but with a mixture of steam and air, and the inferential temperatures in these tables, therefore, cannot without modification be applied directly in practice

If the degree of preliminary vacuum in a chamber is known it is a simple matter to ascertain the true pressure of the steam in any given mixture of steam and air The usual pattern of ejector used in sterilizers cannot be expected, in a single operation, to produce a vacuum of more than 10 inches of mercury (Underwood) Suppose the preliminary vacuum to be 10 inches, the residual air will then be at a pressure of 10 lb per square inch (approx) If steam is now let in up to a gauge pressure of 15 lb the absolute pressure of the mixture will be 30 lb of which the steam accounts for 20 lb (Dalton's law) Steam at an absolute pressure of 20 lb can only attain a temperature of 227 9° F (see Table I), but it is not uncommon for a maker to assume that a gauge reading of 15 lb obtained in this way is sufficient evidence of safe working

Table II shows the possible temperatures of steam at different pressures for given mixtures of steam and air It can be seen from this table that a temperature above

TABLE II—*Temperatures at Different Pressures of Mixtures of Air and Steam*

Gauge Pressure in lb	Pure Steam	Steam and Air at 22 5 inches Vacuum	Steam and Air at 15 inches	Steam and Air at Atmospheric Pressure—that is no Vacuum
10	240°	230	220°	193°
15	250	242°	224°	212°
20	259	258	245	226°

240° F with a gauge reading of 15 lb is only possible in a chamber with a preliminary partial vacuum of 22 inches of mercury, a figure which is more than double the capacity of the average steam-ejector mechanism for a single working

The standards for effective sterilization given in surgical and bacteriological textbooks are not comprehensive enough The usual expression met with is "pure steam at a temperature of 240° F for twenty minutes," and while this is strictly accurate as a statement of fact it is of little use in practice to makers and operators, since pure steam is not used in the vast majority of sterilizers on the market to-day A practical and comprehensive standard should read as follows

A temperature of 240° F or 115° C obtained by pure steam under a pressure of 10 lb per square inch, or, if any mixture of steam and air is used at such additional pressure as will fully compensate for the partial pressure of the air"

In addition to the effect of residual air on temperature it is important to examine the time factor A pressure-gauge reading is the result of a comparatively rapid response of the instrument to any changes in pressure This condition, however, cannot obtain with regard to temperature Time is necessary to build up a given temperature, and a thermometer rise will always show an appreciable lag after a given pressure gauge reading It is thus clear that if the standard accepted is twenty minutes at 240° F, then it will be some appreciable time after the gauge reaches the desired pressure before the whole mass of dressings attains the required temperature That this period is not negligible has been experimentally proved, and the curves in Fig 1 show that it may be so prolonged that the standard of 240° F for twenty minutes is never fulfilled in what may be regarded as normal working conditions for many sterilizers on the market to day This temperature lag period, since it depends on many factors, cannot be arbitrarily fixed before the operation It will vary with different instruments In the same instrument, moreover, it will vary with different loads, depending on their nature and quantity, and also in summer and in winter Further, if the same instrument is worked more than once in succession, the second working in a warm apparatus will need a shorter time lag allowance than the first working A strong case exists therefore, for thermometric rather than gauge control of the time factor in sterilizers

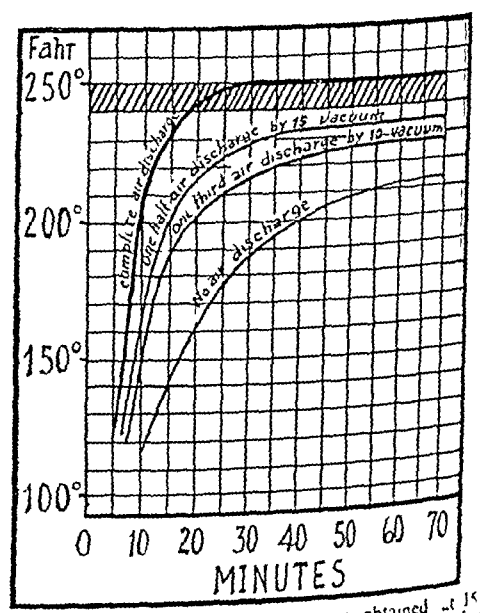


FIG 1 (from Underwood)—Temperature obtained at 15 lb gauge pressure, in a sterilizer with varying degrees of preliminary vacuum showing lag in rise of temperature and the degrading effect of residual air on the temperatures arrived from gauge readings

Numerous devices are on the market for insertion among the dressings which by fusion or a change of colour indicate that the desired temperature has been reached inside the drums These devices are not always reliable (Hayes 1937 Underwood 1934) and they have the grave defect, even when functioning accurately of not showing the precise moment when the required temperature has been attained They are of no value therefore in controlling the variable time lag factor The lag in building up the temperature may be so excessive from various causes that the fusion or colour change may actually occur just a moment before the period of sterilization is brought to an end and the sterilizer opened (Fig 1)

It now remains to discuss the means by which sterilizers can be efficiently worked and the maximum degree of safety ensured There are two ways in which the problem may be dealt with (1) the gravity discharge system, (2) the direct internal thermometer control system

The Gravity Discharge System

This is the name given by Underwood to his system of sterilizer operation It is applicable to any existing form of sterilizer provided the steam inlet and outlet are suitably placed The following is a brief description of the method Air is twice as heavy as steam and steam when run into a chamber containing air tends to float on a bed of air Gravity therefore tends to locate the air in the lowest parts of the chamber (see Fig 2) If

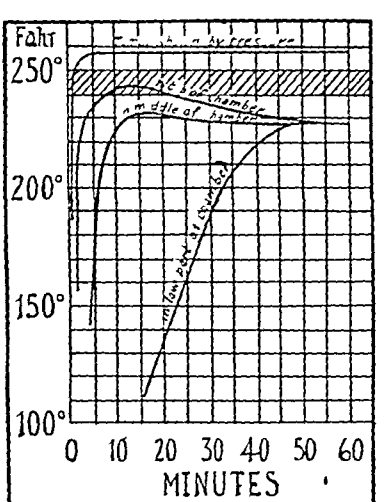

FIG 2 (from Underwood)—Curves showing differences in temperature readings in different parts of a sterilizer The coolest part of the chamber is at floor level No air has been evacuated The three lowest curves are by temperature readings the top curve by inferential gauge reading

now while steam is being run in the exhaust pipe from the chamber is kept open a discharge of air and steam and condensed water vapour will escape With the escape of air and steam there is of course a drop in the jacket pressure which at the start should have been at its maximum—that is, 10 lb The chamber pressure, owing to the fact that the exhaust is open will only rise slightly —about 3 or 4 lb It should not rise more than this If this process is continued long enough (five minutes recommended) the operator will notice a change in the nature of the escape It will at about the end of the period consist of a fine feathery discharge presumably of pure steam, as all the air inside the chamber will have been removed by the so called gravity displacement The exhaust outlet is at this stage almost but not quite shut off It is left open just enough to allow a continuous escape of this fine feathery steam vapour *throughout the entire operation of sterilization* As there is only a slight escape of steam the chamber pressure if the heating arrangement is strong enough should continue to rise until a pressure of 10 lb is obtained The operation of sterilization is timed to begin at this point and continued for twenty minutes the required pressure being maintained by the safety valve and the intensity of the heaters or burners With this method Underwood has found that with 10 lb pressure a temperature of 240 F can invariably be obtained inside the chamber as tested by potentiometer readings The temperature inside the chamber can also be deduced indirectly When all the air is out and the fine feathery vapour is continuously escaping from the outlet it is evident that a thermometer placed in the path of this vapour will give a reading which cannot be higher than the temperature of the steam in the chamber Underwood claims that a thermometer placed in this discharge vapour will record a temperature between 240 and 250 F for 15 lb pressure and by actual experiment I have been able to show a temperature of 239 F working at 10 lb pressure

It is important to note that it is not possible to prove this effectively by merely holding the thermometer in the steam current as it escapes from the outlet Steam released from a chamber under pressure expands almost adiabatically It thus becomes unsaturated and heats a thermometer very slowly (Watson 1926) To repeat the experiment correctly the thermometer bulb should be in the path of the steam in the outlet tube preferably on the proximal side of the exhaust valve

Some sterilizers have the outlet located at the top Steam is usually allowed to escape for five minutes and the exhaust completely closed before sterilization is started Owing to the relative densities of steam and air a complete evacuation of residual air cannot be effected in these sterilizers The essential requirements are an exhaust at the lowest level in the sterilizer an inlet at a high level in the chamber and a continuous escape of a fine stream of vapour during the whole process of sterilization

In actual practice the sterilizers made to Underwood's design have a thermostatic control at the outlet It expands when heated and contracts when cool The size is so adjusted to the outlet that at a given temperature it expands just enough to allow the slight continuous escape of steam essential to the correct working of this method In the path of the discharge a thermometer is inserted and in some models it may be connected with a recording device Automatic control with complete elimination of the personal factor is a comparatively simple engineering problem and is effected by operating a timing device from the discharge thermometer

Direct Internal Thermometer Control System

There are many obvious ways of working this The Cambridge Instrument Company Ltd produce a mercurial type of thermometer enclosed in a bulb of special heat and pressure resisting steel which is connected by means of a metal capillary tube to a dial or other recorder outside the chamber The range of temperature is from 50 to 300 F and such thermometers find many applications in trade and industry The capillary tube however is not a flexible arrangement so that the location of the thermometer is of necessity limited it would normally be fixed to the floor or wall of the chamber This disadvantage can be overcome by the use of a potentiometer such as a Leeds and Northrup potentiometer with flexible thermocouples which can be inserted through or under the door of the sterilizer Potentiometers are however delicate and costly instruments and not adapted to routine use A simpler and less costly device is that described by Rosenau (1903) and Hayes (1937) although with this instrument only a definite predetermined maximum reading of temperature can be recorded

Large and costly machines with patented fully automatic devices controlled from the pressure gauge alone may be seen in most hospitals and disinfection stations to day Unhappily it is not yet clearly appreciated that they are defective in two essential features and may be dangerous These defective features are first, the use of the pressure gauge as an inferential device for reading or recording temperature, and, secondly, the timing of the sterilizing process, which is regulated by clock to commence from the moment the desired pressure is attained on the gauge I have convinced a well-known firm of manufacturers of these real defects, and they have now produced an automatic control dependent on a mercurial thermostat located inside the chamber It must be remembered, however, that it is possible for a thermometer in one part to show the required temperature while another part of the chamber, depending on its position and the nature of its contents, gives a lower reading (vide Fig 2) To meet this difficulty and also to protect the thermostat from wear and tear it has been located in a suitable dummy drum placed low down and attached permanently to the door of the sterilizer This dummy drum is the model drum, and is packed with a sample of the most difficult type of material used, and the operator is instructed to see that no other drum in the load is packed more tightly Any temperature attained in this drum by reason of its contents, the method of packing, and its low level with reference to the outlet must be lower than or equal to that attained in any other drum in the load

It has been suggested that a thermostat located near the wall of the chamber is subject to radiation effects from the jacket, and may show a higher reading than the deeper contents of the chamber This objection is unimportant, as the jackets of sterilizers do not extend over the doors, and, if anything, that part of the chamber near the door is the coolest part so far as the walls are concerned, since it is subject to most loss by radiation to the metal door Smaller and cheaper sterilizers without automatic control which have little room for a dummy drum can be worked on the same principle, with a thermostat located in a small flat metal cage on the floor, the electrical connexions being carried through insulated openings in the jacket

The Two Systems Contrasted

I now come to the relative advantages of these two systems Both appear to fulfil the conditions which I have stressed in the foregoing paragraphs The choice will perhaps depend on cost and applicability to local conditions, or other features which have little bearing on their efficiency There are certain arguments, however, which should be given close attention before a final decision is arrived at It is claimed that in the gravity discharge system the control temperature at the discharge must be lower than any temperature which is attained in the chamber It is not certain, however, that the steam cannot on occasion make a rapid transit through an artificial channel among the dressings from inlet to outlet, leaving pockets of air in dead ends among the dressings The outlet temperature would then approximate to or even equal the inlet temperature, and yet appreciable areas of the chamber may be left at dangerously cool levels The case, therefore, for a reasonably high degree of preliminary vacuum which would assist diffusion of steam into the recesses of dressings remains a strong one This applies with special force when sterilizing containers with fluid media or saline, etc, which must of necessity stand with their openings upwards and thus offer the most adverse conditions for any gravity effects on their contained air Each container in effect acts as a miniature chamber, with its inlet in the worst possible position—namely, at the top

Another factor depending on the behaviour of gases when mixed should be taken into account when considering the value of a preliminary vacuum If we have a chamber from which all air has been removed, and by means of a steam pipe suddenly place it in communication with a boiler containing boiling water, the water will at once produce enough vapour to saturate the space, and the pressure will rapidly rise to a given value depending on the intensity of heat applied to the boiler (Watson, 1926) If, however, we have a chamber which has not been subjected to any preliminary vacuum and we place it in connexion with a steam boiler, the process of building up the pressure and temperature will be much slower Thus when the gravity method is used the total time during which surgical materials are exposed to heat is necessarily longer than if a vacuum process is used Although the earlier stages of heating in both methods will be represented by curves in which no point is higher than the final 240° F, nevertheless with a preliminary vacuum the rise of the curve to 240° F will be steep and rapid, but with the gravity displacement it must be slower and less steep, and the difference between the two curves will be accentuated the heavier the load and the more intricate the interspaces in the dressings The balance of economy in fuel, in time, and particularly in perishable rubber materials by reason of the additional baking period, is therefore in favour of a preliminary vacuum, since the variable time-lag factor will be less with this method

Another possible objection to the gravity discharge type of sterilizer is the use of the expansion thermostat at the outlet Even the best of these are subject to fatigue changes, and unless an adequate service department is available to effect an alteration in this device when necessary it may become a source of trouble and therefore not be so reliable as an internal mercurial thermostat with automatic control It is also possible, with a thermostatic control in the outlet, to have prolonged working without the desired temperature being attained owing to clogging of the restricted opening in the discharge valve, resulting in fuel waste and working troubles These objections lose their force in technically advanced countries, but may attain considerable importance under conditions of working in India and other places abroad, with less expert staffs They do not apply in the case of simple sterilizers without any form of thermostatic control With such sterilizers the gravity discharge system of working should be the universal method for ensuring the maximum possible air evacuation

Summary

1 Arguments are offered against the use of the pressure gauge for inferential readings of temperatures in sterilizers

2 Residual air and lag in temperature rise are two fundamental causes of inefficiency in working

3 No instrument designed to work at 10 lb pressure can be effective unless a preliminary vacuum of not less than 30 inches has been secured in the chamber, and if 15 lb is used the minimum vacuum necessary is at least 21 inches to secure a lethal temperature of 240° F

4 Two systems for ensuring maximum efficiency in sterilizers are described and their relative merits discussed

I have to acknowledge with thanks permission from W B Underwood to reproduce Figs 1 and 2 from his textbook

SATURDAY SEPTEMBER 10 1938

THE OCCIPITO-POSTERIOR CASE

Of the numerous conditions which give rise to difficulty in labour none has caused greater perplexity in the mind not only of the student but also of the teacher than the trivial modification of the usual foetal position known as 'occipito-posterior position of the vertex' The Section of Obstetrics and Gynaecology therefore did well to choose this subject for formal discussion at the recent Plymouth Meeting of the British Medical Association Professor Chassar Moir the first occupant of the recently established Nuffield Chair of Obstetrics and Gynaecology in the University of Oxford opened the discussion with a lucid and effectively delivered address which received a warm welcome from his hearers and will be found in the opening pages of the *Journal* this week The subsequent discussion which was strictly practical in character has been summarized already in a previous issue (July 30, p 240) It is interesting to examine this discussion from the point of view of the practitioner who, realizing the importance of the subject and its difficulties seeks guidance in the proceedings of our Scientific Sections With a unanimity unwonted in obstetric circles it was agreed that the best line of management was to correct the malposition of the head by manual rotation and deliver with the occiput in front the moment for this manipulative intervention must however, be chosen with care and judgment In only a minority of cases will it be necessary It should be further noted that by manual rotation is meant, not a mere twisting of the neck of the foetus but a complete rotation of the trunk and head so as to preserve the normal relation of the back of the head to the foetal spine This manœuvre is described and figured in every text-book of midwifery and demonstrated upon the dummy in tutorial classes, and the impression derived by the student usually is that it is a matter of no particular difficulty This impression will not be corrected until he first attempts to carry out the procedure himself upon a woman in labour and the correction of the impression may then cause him a shock which he is likely never to forget Difficulties may be said to have been the main preoccupation of speakers in the discussion at Plymouth

Accurate diagnosis which is naturally of prime importance, can only be made in Professor Chassar Moir's view when labour is in progress and then only by introducing the whole hand into the vagina, under full surgical anaesthesia Attempts to make ante natal diagnosis we learn are not of great importance since the head does not as a rule lie in an oblique pelvic diameter before labour starts it is more likely to lie somewhere between the transverse and an oblique diameter and may rotate in either direction when it settles into the pelvis Further abdominal examination is an unreliable method of determining the position for radiologists have shown that the neck of the foetus *in utero* may be so twisted as to make location of the back by abdominal palpation a misleading index of the position of the occiput In this respect views have evidently undergone some change for until recently considerable importance was attached to ante natal diagnosis and to the correction of the malposition by external manipulation before the onset of labour It now appears that the frequency with which manipulations are followed by a normal labour with delivery of the head in the anterior position may prove either that the method was successful or that the ante natal diagnosis was at fault Doubts were expressed during the discussion as to the possibility of correcting an occipito posterior position before labour by any known method and if this view is correct there is nothing to be gained by attempts at prophylactic treatment Precise diagnosis must then be postponed until it becomes possible to introduce the whole hand into the vagina without undue risk With a primipara this procedure calls for the exercise of great patience and gentleness on the part of the obstetrician, and for the establishment of full surgical anaesthesia because the vulval reflexes are often the last to disappear In the case we are considering the membranes usually rupture early moulding also occurs early and it may be found that identification of the cranial fontanelles and sutures is not the simple matter it appears to be when examining a dried specimen of the foetal skull How then in a difficult case is the position of the occiput to be finally determined? Some speakers in the discussion replied By passing the fingers far enough up to find the ear for the convexity of the helix is naturally directed towards the occiput Other speakers demurred pointing out that the external ear may be folded forwards on the face when the convexity will be directed towards the forehead Is there then nothing upon which the harassed practitioner can rely? Professor Chassar Moir says there is for by passing the fingers all round and above the head the smooth area at the back where the

occipital region passes into the nape of the neck can always be recognized and cannot be mistaken for any part of the face Diagnosis having been made the malposition is to be corrected, not by twisting the head round so as to bring the occiput forward, but by rotating the trunk with the fingers passed up behind the anterior shoulder Delivery can be effected without further delay, for the passages have been already stretched by the introduction of the hand

It cannot be denied that the Plymouth discussion is calculated to shake certain established beliefs In 1930 Dr Douglas Miller pointed out that from hospital statistics it appeared that 90 per cent of cases diagnosed ante-natally as occipito-posterior were delivered spontaneously when the membranes did not rupture early and uterine pains were effective This generally accepted view has brought comfort to many a worried mind in the past, as many other ill-founded beliefs have done in all walks of life We should all be reluctant to jettison it, because it implied that so long as labour was making normal progress it mattered little where the occiput lay It was not until the pace slowed down or labour was arrested that anxiety began, and nothing that was said at Plymouth invalidates this view If the patient is a multipara, with a pelvis of normal size or larger, and the uterine pains are regular and strong, spontaneous delivery of the head after posterior rotation of the occiput is often surprisingly easy, as was pointed out at Plymouth In the case of a primipara the difficulty of delivery is, of course, much greater and involves increased risk of injury to the child when the head reaches the pelvic floor in the face-to-pubes position One of the speakers in the discussion (Mr Bryan Williams) stated that in the Walton Hospital, Liverpool, there were in the year 1937 fifty-three cases of *persistent* occipito-posterior position, and of these forty-one were delivered spontaneously, there was no maternal or foetal mortality in the series of fifty-three cases The number of multiparae in this series was not stated, but in all lying-in hospitals they form a considerable majority Obviously then there are weighty considerations in favour of an attitude of hopeful expectancy when the existence of an occipito-posterior position is suspected before or early in labour Equally weighty considerations there are which urge that hopeful expectancy has its limits, and if these limits are exceeded disaster may result to both mother and child The unflexed and unrotated head may prove a real obstruction to delivery, and when, in the absence of pelvic contraction, there is clinical evidence of arrest of the head, action must be taken promptly and effectively The hall-mark of the experienced obstetrician is his ability to await the favourable moment for intervention, and not to let that moment slip

Obstetric experience and judgment are not easily acquired When a student obtains his qualification to practise midwifery the opportunities he has had to gain practical knowledge of this subject, while they vary in different medical schools, never adequately fit him to deal with the emergencies of midwifery, and the new regulations of the General Medical Council which become operative during the present year will not greatly improve matters although they constitute a welcome advance A certain number of men, endowed with rare qualities, may find it possible to become self taught in the rough school of actual practice with full responsibility, their number is probably very small Opportunities for instruction in midwifery, available to men already in practice, are gradually increasing in this country but are still very inadequate The day is perhaps not far distant when the choice must be made between the present policy of training all students more or less equally and inadequately, and the alternative policy of encouraging the development of a small class of fully trained and experienced practitioners into whose hands obstetric practice would inevitably gravitate

INDUSTRIAL HEALTH

The annual report of the Chief Inspector of Factories for 1937[1] is of special interest because of its relation to the new Factories Act, 1937 Owing to the additional requirements of the Act, which came into force on July 1 of this year, it has been necessary to increase the staff of the inspectorate substantially, and there are now 290 inspectors in all This number includes eleven medical inspectors, and it is difficult to believe that only thirty-six years ago the inspectorate included but *one* medical inspector In three years' time the inspectorate will total 332, and it is not unlikely that even this number will prove, in course of time, to be inadequate for its manifold duties It might be feared that the employers would resent the additional intrusion in their factories, but the Chief Inspector Sir Duncan Wilson, reassures us on this point when he states that "at no time in the history of factory legislation have the relations between the inspectorate and the two chief partners in industrial progress—employers and workers—been closer or more friendly" He is convinced that the spirit of reasonableness existing on all sides will cause the enforcement of the new Act to proceed smoothly, and conduce to the best interests of all engaged in industry

[1] Cmd 5802 London H M Stationery Office 19 (postage extra)

Unfortunately there has been a further increase in the number of accidents reported, the total accidents (causing absence of more than three days) amounting to 192 539 and fatalities to 1 002 These figures are 9 per cent in excess of those for 1936, and they are due partly to the increased production of steel needed for armaments Another factor of importance is the employment of large numbers of unskilled men consequent on the shortage of skilled and semi skilled labour The subject of accidents to young workers which was emphasized by the Chief Inspector in his report for 1934, is again discussed in detail It is still a common experience of the inspectors to find that employers and managers 'fail to understand that knowledge and appreciation of danger are not simply inborn and that young people cannot be expected to work safely unless they are properly and sympathetically instructed Statistics are adduced which show that in a large number of factories the accidents to young persons were about twice as numerous as to adults their frequency being specially great in the first year of employment However, excellent schemes of training and subsequent supervision are reported from some districts with a consequent reduction of accidents The Factory Department has issued a leaflet on "Accidents to Young Workers," while the National Safety First Association has published a pamphlet entitled "Starting Young Workers Safely in Industry"

In his report on health the Senior Medical Inspector, Dr J C Bridge discusses the medical aspects of the new Act An important provision empowers the Secretary of State to require reasonable arrangements to be made for medical supervision when he has reason to believe that cases of illness are due to the nature of the work or where there may be risk to health from the introduction of a new process or new substance for use in a process Another important change relates to certificates of fitness Young workers will now be examined not only for fitness but with a view to determining the work for which they are suitable The practitioners appointed for this purpose are to be designated "examining surgeons" in place of the old time title of "certifying surgeons" In his report on industrial diseases Dr Bridge notes that there has been some increase in cases of epitheliomatous ulceration brought to light by thorough medical examination Cases of carbon monoxide poisoning have likewise increased, and this was chiefly due to the larger number of blast furnaces now being worked Deaths from silicosis and silicosis combined with tuberculosis showed no sign of reduction, while the number of cases of dermatitis—which are voluntarily reported—was 12 per cent greater than last year Though the medical report is not encouraging that relating to 'welfare" is more pleasing and an increasing number of small employers show an appreciation of its practical value For instance it is found that in areas where the shortage of labour is acute factories with good welfare conditions have long waiting lists and are able to recruit the best workers while the less enlightened employers are left to scramble for the remainder The extraordinary advance made by the welfare movement in recent years is illustrated by the record of a firm which had been satisfied with two wash basins for the 2 000 men in the chromium plating department of its old factory but which has excellent washing accommodation in its new works Many new mess rooms and canteens are now being built throughout the country and the Milk in Industry" scheme is meeting with great success It is now in operation in nearly 7 000 factories employing 2¼ million workers

Under the new Act the hours of employment have been substantially reduced the legal hours of sixty per week in non textile factories and fifty five and a half in textile factories being reduced to a uniform forty-eight hours It is true that most trades had already adopted a week of forty-eight hours or less the printing trade having one of forty five hours the boot and shoe trade one of forty six hours and the flour milling trade one of forty two or forty four hours Nevertheless, certain groups of employers had retained a normal working week of fifty four and a half or fifty five and a half hours so it is well that they should be made to conform more closely with current custom Also a few of them were guilty of flagrant infringements of the hours legally permitted An instance is noted of the women and girls in a laundry who were compelled to work eighty four hours a week and another of a firm of bakers who in the week preceding the Coronation employed women and young persons from 6 a m to midnight on each day of the week Fortunately such occurrences are very infrequent and there can be no doubt that the great majority of employers will loyally endeavour to carry out the requirements of the new Act

INSURANCE FOR THE MEDICAL PROFESSION

The Representative Meeting of the British Medical Association at Belfast in 1937 instructed the Council to devise some method of impressing upon the recently qualified and the junior practitioner the importance of adequate life assurance The Council referred the problem to the Organization Committee which got in touch with the Medical Insurance Agency and the result is the appearance in this week's *Supplement* of the first of a series of three articles contributed by the

Honorary Secretary of the Agency, Dr Henry Robinson, which deal not only with life assurance but also with pensions, sickness, motor-car, and, in fact all the insurances needed by the profession The scope of the articles is necessarily elementary, but the series may be commended to the attention not only of those for whom it is primarily designed but also of more senior practitioners Especially to be noted is the insistence rightly laid upon the importance of transacting all insurances of every kind through the Medical Insurance Agency, which itself came into existence thirty-one years ago by a happy conspiracy on the part of the late Editors of the *British Medical Journal* and of the *Lancet*, Sir Dawson Williams and Sir Squire Sprigge The benefits which the Agency has rendered to the profession are outstanding, but even now they are not so widely taken advantage of as they should be, a state of affairs which it is hoped this series of articles may speedily improve

EXPERIMENTAL INTERRUPTION OF PREGNANCY

The clinician at present has at his disposal only such oestrogenic preparations as are derived from natural sources—namely, oestradiol, the hormone actually secreted by the follicle, and its two degradation compounds, oestrone and oestriol The scope of activity of these substances is fairly well defined The atrophic uterus of amenorrhoea may be restored to normal dimensions and oestrin withdrawal bleeding induced Spasmodic dysmenorrhoea, uterine inertia, and atrophic vaginitis may all be successfully treated, but injection of the material is usually required Oral effectiveness is limited to the relief of menopausal symptoms The principal measures introduced to prolong the effect of the injected hormone are esterification of the hormone with benzoic acid and the subcutaneous implantation of tablets of the pure crystalline material[1] The latter has been found to produce an oestrogenic effect which may last for six weeks to three months[2] Progesterone and testosterone have for some time been available in synthetic form *Oestradiol and its derivatives, on the* other hand, have not been synthesized During the past year or so, however synthetic compounds have been prepared which show oestrogenic properties to a varying extent These compounds, it should be emphasized, bear little relation chemically to the naturally occurring sex hormones, which are *cyclo*-pentenophenanthrene derivatives One such synthetic compound with potent oestrogenic properties, diethyl-stilboestrol, has been prepared by Dodds and his colleagues and is a derivative of the relatively simple aromatic substance stilbene It is highly active by mouth and can induce a number of oestrogenic effects The fact that it is chemically unrelated to oestrin, however, makes it possible that its effects may not exactly correspond either quantitatively or qualitatively to those of the naturally occurring hormone In the current issue of the *Journal* (p 557) Parkes, Dodds and Noble report on the potent anti-progesterone effect of the oral administration of this synthetic compound, which is capable of preventing nidation of the fertilized ovum and of causing interruption of established pregnancy in experimental animals The application of this work to the human female may open up the most important possibilities, and it seems likely that hormonal prevention and termination of pregnancy are within sight, though a considerable amount of careful clinical investigation, such as is being undertaken at the present moment, is needed before any definite statement can be made on this matter The other substance investigated by Parkes, Dodds, and Noble is ethinyl oestradiol The addition of the ethinyl group to the sex hormones has been found to increase their oral effectiveness very considerably Ethinyl oestradiol, for instance, is seventeen times more effective by mouth than oestradiol Ethinyl progesterone is also active by this route, though progesterone itself has to be injected to produce any result at all Oral administration of the ethinyl oestrogen appears to antagonize progesterone even more effectively than oral administration of diethyl stilboestrol The future application of these two compounds will be watched with much interest

IMMUNIZATION AGAINST SCARLET FEVER

Active immunization against scarlet fever is not very popular, largely because many injections—usually five—are needed, because reactions which may interfere with work or school often occur, and because protection cannot be as fully assured as in the case of immunization against diphtheria Collins,[1] studying 8,000 families in eighteen States in the USA, characterized as "surprisingly large" the low immunization rate of 4 per cent of children aged 10 to 11 In Philadelphia, in a population of almost two millions only 5,500 children are recorded as having been immunized in four years Place[2] notes that in Boston from 1913 to 1924 eighty-seven nurses among a staff of 1,009—that is, 8 6 per cent—developed scarlet fever This figure agrees well with those collected some years ago for English hospitals and by the Drs Dick in the USA[3] From 1925 to 1936, when active immunization had been adopted 1 446 nurses served in the wards of the Boston Hospital and only 1 3 per cent contracted scarlet fever After elimination of those who did not undergo the full course of five injections three nurses alone remained who had been immunized" and yet developed the disease subsequently It is of interest that in the first twelve-year period 64 per cent suffered from streptococcal infections such as tonsillitis, septic throat erysipelas, and peritonsillar while in the second twelve-year "immunization" period no evidence of increase was found which suggested that scarlet fever was occurring in unrecognized form—and there was a reduction to 4 66 per cent Much effort has been spent in attempts to make immunization more popular Kern[4] and co workers aimed at the avoidance

of reactions by giving small doses intracutaneously they state that no disability was experienced after the injection but describe swellings from one to three inches in diameter and occasionally larger Of 140 children receiving from three to ten doses 90 per cent became Dick negative yet curiously enough only 40 per cent of forty children available for re test six months later remained negative Two children who developed 'miniature scarlet fever' with rash and pyrexia after injection did not rapidly become negative Formalinization of toxin promised to be helpful though the results obtained by Toyoda and his collaborators suggested that one cannot turn toxin into 'toxoid' without lowering its immunizing power and Dr and Mrs Dick[6] were of opinion that whatever immunizing power 'toxoid' possessed was derived entirely from remnants of unaltered toxin Anderson recalls that Veldee reported that 80 per cent of children became Dick negative after three injections of his toxoid Anderson observed some 8 000 children injected with three doses of 'toxoid' *Discussing reactions he notes a "really* popular acceptance' owing to the rarity of reactions Incidentally he says that the immunization produced no more severe reactions than followed the use of diphtheria toxoid the reaction rate for which by the way is generally quoted as being about 10 per cent However only 52 per cent of the 4 783 Dick positive children became negative the variations in different groups being from 21 per cent to over 60 per cent Medical men will feel that a 50 per cent conversion is not high enough to justify the work and cost necessary to persuade the public to adopt eagerly or even willingly the use of toxoid but will continue to hope for some new discovery that may yield an improved immunizing agent It may be that Farago[8] has begun this promising journey with purified toxin adsorbed on aluminium gel given in three doses and yielding a high conversion rate to the Dick-negative condition About half the children showed no reaction but in ½ per cent scarlatinal rashes developed

PHARMACOLOGICAL ACTIONS OF ANALEPTICS

Both coramine and cardiazol particularly the former have attained clinical popularity in this country and have to a large extent replaced strychnine as analeptics Those familiar with pharmacological literature will know that the evidence regarding the action of these drugs is very contradictory and confusing A review of this evidence compiled by Professor Hildebrandt of Giessen is therefore of exceptional interest The names coramine and cardiazol suggest a direct action on the heart but with both drugs the weight of reliable evidence for such an effect is doubtful if not definitely negative Both are stimulants of the central nervous system This is clearly demonstrated by the convulsive action of toxic doses while therapeutic doses stimulate the respiratory and vasomotor centres This stimulant action has been measured in a semi quantitative manner by determining the dose needed to antagonize narcotics and particularly barbiturates The evidence as summarized by Professor Hildebrandt shows that cardiazol is a more powerful antagonist to narcotics than is coramine The summaries of the literature suggest that Swiss authors have tended to support coramine while cardiazol has found favour in Germany To several American workers however cardiazol is apparently superior to coramine and picrotoxin to both The clinical popularity of analeptics seems therefore to bear little relation to the results of pharmacological analysis of their actions

CATARRHAL JAUNDICE

Dr C E Lakin's opening paper in the discussion at Plymouth on toxic and infective jaundice reported in our issue of August 27[1] gives cause for much thought and renews interest in that important and elusive condition—catarrhal jaundice Even the name is under a cloud Though some authorities still speak of catarrhal jaundice either sporadic or epidemic others would do away with this name entirely and substitute for it that of subacute infective hepatitis or hepatic necrosis Dr Lakin considers the possibility of separating two forms of catarrhal jaundice as has been suggested by Hurst but finds it difficult to distinguish between a type due to blocking of the common bile duct secondary to a gastro duodenitis and a type due to a true hepatitis Many observations suggest that the majority of cases of so called catarrhal jaundice are in fact of the nature of a mild subacute hepatic necrosis In a very few patients the clinical and pathological picture of an acute yellow atrophy appears to supervene directly upon what at first begins as a simple catarrhal jaundice In catarrhal jaundice—or epidemic hepatitis —there appears to be an incubation period of about twenty one days and fever at the onset suggests an infective cause In support of this view come some careful and interesting studies from Copenhagen by Drs Anderson and Tulinius These workers have investigated hepatitis in pigs and other animals as well as in man By feeding to healthy pigs the liver from pigs suffering from porcine hepatitis they have been able to cause gross changes in the livers of the animals tested together with jaundice such transmission was possible from pig to pig and occurred consistently in nine experiments The next step in these researches was the withdrawal of duodenal juice from patients suffering from clinical epidemic jaundice Of seventeen pigs to which this juice (from thirteen different patients) was fed ten showed changes corresponding exactly to those of porcine hepatitis in one the result was doubtful and in six it was negative Retransmission of this human hepatitis to a second pig has hitherto been successful in only one case The occurrence of liver changes in

these experiments seemed to depend upon the liver or duodenal juice being taken from the jaundiced pig or patient early in the disease Careful bacteriological examinations appear to have excluded any known species of bacteria as a cause Weil's disease was excluded serologically, and in nine control experiments with healthy pig's liver and normal human duodenal juice no comparable hepatic changes were found Similar transmission appears to be possible in the rat, and this work is perhaps the first which has shown direct transmission of "hepatitis" from one animal to another Anderson suggests that epidemic hepatitis in man is probably an infective condition acquired through the alimentary tract, possibly from an animal jaundice, as in the jaundiced pigs used in his experiments This work is undoubtedly of great interest, and gives hope of further investigation and study of a condition in man which, though often regarded as trivial, may nevertheless in some cases be attended by serious sequelae and complications

"INFLAMMATORY CARCINOMA" OF THE BREAST

"Inflammatory carcinoma" is one of the many terms applied to carcinoma of the breast with inflammatory signs in the overlying skin, the well-known "peau d'orange" is one of its manifestations Taylor and Meltzer[1] give a comprehensive account based on thirty-eight personally observed cases and a review of the literature In their experience inflammatory carcinoma is not rare, constituting about 4 per cent of all cancers of the breast It has much the same age distribution as other cancers of the breast but is rare over the age of 70 An association with pregnancy and lactation, responsible for the term "lactation cancer," is far from constant At least two clinical varieties of the disease are distinguishable In one variety a cancer of the breast and inflammatory signs in the skin become evident at the same time, in another, inflammatory signs appear abruptly in a breast which has long contained a scirrhous carcinoma, or in the other breast, or sometimes after mastectomy for scirrhous carcinoma The inflammatory signs consist of redness, heat, oedema, orange-peel appearance of the skin, diffuse and ill-defined swelling, and sometimes pain and tenderness, but all are not observed together in every case These signs, and some histological features which have been described as "inflammatory," are almost certainly attributable to lymphatic blockage There is general agreement that the essential process is a continuous permeation of subepidermal lymphatics by cancer cells There is no true inflammation, and, in the absence of complications, there are no signs of toxaemia The term "inflammatory carcinoma," therefore, is not entirely satisfactory The disease commonly develops in obese women with fatty pendulous breasts Pregnancy and lactation predispose to it, but there is no evidence that the action of hormones can be impugned Lymphatics are abundant and fibrous tissue is relatively sparse in the lactating breast, and similar conditions obtain in less degree in the large fatty breast, it is probably these which predispose to inflammatory carcinoma Early and extensive lymphatic dissemination occurs within the breast and beyond it, and the sclerosing lymphangitis which accompanies ordinary cancer of the breast is notably lacking The histological type of the cancer is not constant It seems that the distinctive behaviour can be impressed on all kinds of mammary cancer If it be true that some women's tissues, especially the lymphatics, are so constituted that cancers which are not intrinsically exceptional behave in a peculiarly dangerous way, it is equally true that the obstacles in the way of successful treatment are formidable and complicated beyond the ordinary Hitherto the results have been almost always bad Radical excision has cured isolated cases Irradiation produces excellent immediate effects and valuable palliation, but the later course is invariably bad, and multiple irradiations must be given cautiously on account of their liability to produce severe, even fatal, reactions The potentialities of combined irradiation and surgery have not been fully explored, and radical excision after a preliminary irradiation is perhaps the most hopeful method, but with present resources the chances of curing this type of cancer of the breast are distressingly small

[1] *Amer J Cancer* 1938 33 33

THE WELTMANN REACTION

In 1930 Weltmann introduced a serum coagulation reaction which in his view indicated whether a pathological process was exudative or fibrotic, he did not claim that the reaction was specific for any particular disease It is performed by adding 0·1 c.cm. of unhaemolysed serum to each of ten tubes containing 5 c.cm. of a calcium chloride solution of decreasing strength—from 0·1 per cent to 0·01 per cent The tubes are shaken and placed in a boiling-water bath for fifteen minutes The contents of the tubes are then inspected and may be found clear, turbid, or showing flocculation The number of tubes in which coagulation occurs is known as the "coagulation band" of the serum tested In normal serum the first six tubes show flocculation, and the normal coagulation band is therefore 6 If the coagulation band is less than 6 the reaction is said to show a shift to the left, and if 7 or greater, a shift to the right S A Levinson and R I Klein[1] conclude that, in general, acute inflammatory and exudative conditions give a shortened coagulation band or a shift to the left whereas in chronic diseases characterized by fibrotic changes, in the healing stage of acute infections and in parenchymal liver damage, the band tends to lengthen or shift to the right It does not always run parallel with the sedimentation rate In tuberculosis the authors found the Weltmann test "a guide in the course of and in the prognosis of the disease," but they admit that "when exudative and fibrotic changes occur in the lung at the same time as happens frequently in tuberculosis, the Weltmann reaction may not be of great assistance" A correlation was found between the blood *p*H and the reaction.

SURGICAL PROCEDURES IN GENERAL PRACTICE

This is one of a series of articles contributed by invitation

DISLOCATIONS AND FRACTURES OF THUMB AND FINGERS

BY

DAVID TREVOR, M.S., F.R.C.S.

[*Concluded from August 27 p. 462*]

Fractures of the Phalanges

All three phalanges of the fingers and either phalanx of the thumb are liable to be broken, the terminal and proximal being more commonly affected than the middle phalanx. Indirect violence generally accounts for fractures of the proximal phalanx, while direct violence is the common method whereby the terminal phalanx is fractured. Further, as the terminal phalanx is fairly close to the dorsal surface of the finger, the fracture is often an open or compound variety.

The proximal and/or the middle phalangeal fracture is sometimes angulated anteriorly. In the case of the proximal phalanx the deformity is due to the action of the lumbricals and interossei muscles, while fractures of the middle phalanx are angulated by the pull of long flexor tendons.

In the treatment of phalangeal fractures it is important to realize the anatomical fact that the posterior osseous wall of the flexor tendon sheath of the fingers is formed

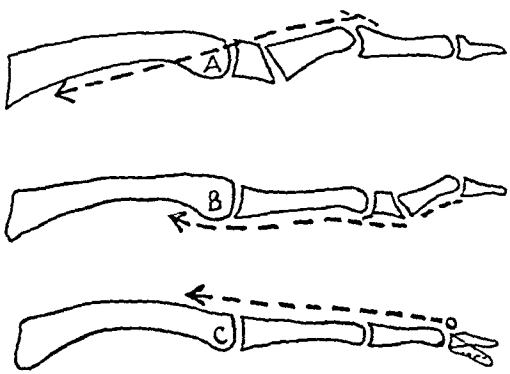

FIG. 1.—A, Fracture of proximal phalanx. Forward angulation caused by pull of the interossei muscles together with the lumbricals. B, Fracture of middle phalanx. Forward angulation caused by the pull of the long flexor tendons. C, Avulsion of a piece of bone from the dorsal aspect of the base of the terminal phalanx; this will cause a type of mallet finger.

by the anterior surface of the proximal and middle phalanges; thus it will be obvious that any forward angulation will diminish the space of the tunnel and cause serious interference with the working of the flexor tendons. This anterior angulation if present *must* be fully corrected.

Any fracture of the proximal or middle phalanx and dislocation or fracture-dislocation of the interphalangeal joint should be treated with the affected finger immobilized in flexion. Study of the anatomy of the knuckle-joint supplies the reason. On either side of the metacarpo-phalangeal joint there is a strong lateral ligament attached nearer to the narrower dorsal aspect of the head of the metacarpal bone than to its wider palmar aspect. With the finger in a straight position these ligaments are relaxed, allowing it to have much lateral mobility and rotation; but when the finger is flexed the lateral mobility and rotation practically cease on account of the lateral ligament becoming stretched by flexion of the metacarpo-phalangeal joint. Again, when a finger is immobilized with the metacarpo-phalangeal joint in a straight position the lateral ligament becomes contracted in a relaxed position; this gives rise to stiffness of the knuckle-joint in an extended position, and flexion is regained very slowly, often full flexion is not restored, with the result that some partial permanent disability remains.

Treatment

In the treatment of a fracture of either the proximal or middle phalanx with displacement local or general anæsthesia is used as the occasion demands. Reduction is effected by long axis traction of the affected finger, and this must be maintained throughout until the fracture is securely fixed; an assistant applies countertraction to the upper part of the forearm. This will correct an *overlap* of the fragments, while local pressure laterally and antero-posteriorly at the site of fracture with the finger partially flexed will correct any *displacement*. An unpadded plaster of Paris slab is then applied to the dorsal aspect of the forearm from the region of the elbow to just distal to the knuckles; the slab is fixed to the limb with a circular plaster of Paris bandage so that the wrist joint is securely immobilized but no plaster fills the palm of the hand. A padded metal splint about three-quarters of an inch wide suitably bent to the front of the distal three-quarters of the forearm, the wrist and the affected finger is then incorporated in the plaster. The finger is finally fixed to the bent splint by either adhesive strapping or plaster of Paris so that the middle phalanx is nearly parallel to the metacarpal bone, the tip of the finger should be uncovered so that the circulation through the finger can be observed (Fig. 2). There

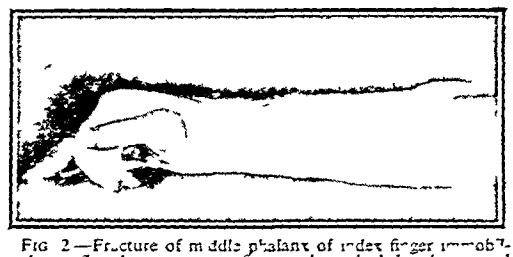

FIG. 2.—Fracture of middle phalanx of index finger immobilized in a flexed position in a finger splint which has been fixed to the forearm by plaster of Paris.

is no need for continuous traction exerted through the pulp of the finger, the danger occasionally seen resulting from the use of this continuous traction method is over-extension with separation of the fractured surfaces.

In terminal fracture the phalanx is immobilized on a straight thinly padded metal splint slightly wider than the finger and extending on the palmar surface from just beyond the tip up to but not including the metacarpo-phalangeal joint. The splint is attached to the finger by means of adhesive strapping. Occasionally a small

"chip" fracture of the dorsal aspect of the base of the terminal phalanx occurs, giving rise to a type of mallet-finger Here the finger should be immobilized with the distal interphalangeal joint slightly hyperextended (Fig 3)

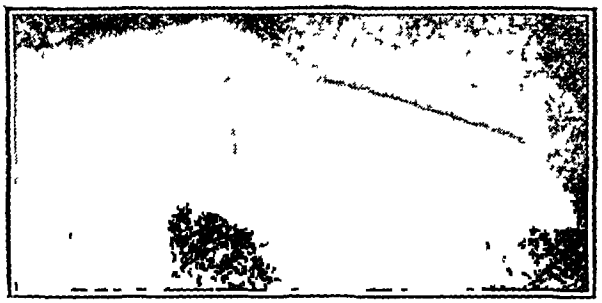

FIG 3—Avulsion of a piece of bone from the dorsal aspect of the terminal phalanx treated on a straight splint with the terminal interphalangeal joint hyperextended

Chip fractures of either condyle of the head of the proximal or middle phalanx should be treated on a straight splint in the same fashion as an ordinary fracture of the terminal phalanx

The period of immobilization for these phalangeal fractures varies from four to six weeks During this period the unaffected fingers are freely used to their full extent it is important to impress upon the patient that the more the unsplinted fingers are used the quicker the function of the hand and of the splinted finger—or fingers, as the case may be—will be regained

Dislocation of the Metacarpo-phalangeal Joint

Any of the metacarpo phalangeal joints may dislocate that of the thumb is the commonest The injury occurs from indirect violence, and the usual resultant deformity is backward displacement of the base of the proximal phalanx, while relatively the head of the metacarpal bone goes forward The dislocation can be reduced by the manipulative manœuvre of long-axis traction, against resistance, of the thumb, which is then strongly flexed at the knuckle while the traction is maintained Fixation of the thumb should then be performed by applying plaster-of Paris for two to three weeks, including the wrist-joint, and up to, but not including, the interphalangeal joint of the thumb Adhesive strapping may be used instead of plaster, but it is not so effective

Occasionally reduction cannot be effected this is said to be due to the head of the metacarpal bone being firmly gripped by the two heads of the flexor pollicis brevis an equally likely explanation is interposition of the thickened anterior part of the capsule between the metacarpal head and the phalanx If reduction by the closed method fails, then there must be resort to an open operation

The area of operation is prepared with ether and 2 per cent solution of iodine for at least twenty-four hours A small incision is made on the palmar aspect of the joint and the capsule incised and strongly retracted, the dislocation is then reduced easily Post-operative fixation of the thumb is carried out, as described, for three to four weeks—about a week longer than by the closed method

Dislocation of the Interphalangeal Joint

The interphalangeal joints are often dislocated a dorsal dislocation usually results, but occasionally a lateral dislocation occurs Reduction of the dislocation is easy, especially the lateral, for frequently, in this type, the patient himself places the finger back in position before seeking advice Dorsal dislocation is reduced, under anaesthesia if necessary—often it is not—by long axis traction followed by strong flexion of the joint, subsequent immobilization is carried out by several layers of adhesive strapping round the finger in a flexed position for about two to three weeks The lateral dislocation is reduced by long-axis traction and immobilized by adhesive strapping in a straight position

Occasionally an interphalangeal joint is the site of a fracture-dislocation in this case the dislocation is reduced and the treatment then follows on the lines of a phalangeal fracture The prognosis in this type of injury is not good, and a certain amount of residual stiffness of the affected joint is usual

Open or Compound Fractures

A word or two may be said about these fractures All patients with compound fractures—even compound fractures of the fingers—should be admitted into an institution they should not be treated as out patients Appropriate doses of anti-tetanic and anti-gas gangrene serum should be given The skin edge of the wound should be carefully excised, the wound rid of any foreign bodies and cleaned with *mild* antiseptics—for example, hydrogen peroxide, flavine, 1 in 1,000, eusol—all haemorrhage arrested, and the wound lightly approximated with interrupted silkworm-gut stitches If the tendons have been divided, suture with fine catgut No 0 should be done, as secondary suture is disappointing When both flexor tendons of a finger have been divided only the profundus tendon should be sutured so as to leave enough room inside the sheath The affected part should be immobilized on a splint in the manner described for a closed fracture, with the exception that observation of the wound can be observed without disturbing the splint The wound should be kept as dry as possible the best dressing for this purpose is iodoform powder or iodoform gauze

If a piece of bone is protruding through the skin in an open fracture it may be removed so as to allow the wound to be closed, but no extensive 'bone operation' should be performed—conservatism is the key note This applies especially to open fractures of the terminal phalanx, where bone is often exposed in a crushed fracture in the region of the nail secondary amputation can be performed successfully at a later date if necessary

---

At the end of 1936 there were in Canada 43,080 persons registered in the fifty seven institutions for the care and treatment of persons suffering from mental diseases of whom 39 833 were resident patients and 3,247 on parole The net increase in resident population during the year was 1,582 The total number of patients under care was 53,326—an increase of 2,592 patients over the number under care in 19 Of the 39 833 patients in residence, 31,268 were classified as insane, 7,711 mental defectives, 603 epileptics and 251 all with types The ratio of insane resident patients per 100,000 of the mean general population at the end of December 19 6 was 282 2, and for the total resident patients 359 5 First admissions numbered 9,002 or 74 4 per cent of the total admissions 2 121, or 17 5 per cent of the total Of the admissions 5,443, or 71 7 per cent, were Canadian born or 13 4 per cent were British born and 1,128, or cent, were foreign born The staffs of all mental numbered 7,538 and the total expenditure during the year $14,222,138

MALNUTRITION AMONG SCHOOL CHILDREN

The Children's Minimum Council whose purpose it is to ensure that no child shall by reason of the poverty of its parents be deprived of at least the minimum of food and other requirements necessary for full health has lately published a couple of pamphlets which make rather disturbing reading. They are calculated to pink official complacency on the subject of school feeding. If anybody is inclined to believe that with free meals and milk rations generally available at elementary schools malnutrition among school children has been reduced as far as is practically possible he should at least acquaint himself with the new perspective in which this council puts the matter. One of the pamphlets is entitled *Malnutrition among School Children* and the other *School Feeding in England and Wales*: both are reprinted from the Nutrition Report of the British Association for Labour Legislation and are the work of Miss Marjorie E. Green who is the secretary of the Council. They are published from the Council's office (72 Horseferry Road, S.W.1).

The Extent of Subnormal Nutrition

Of the children examined at routine medical inspections in 1936 the Chief Medical Officer of the Board of Education reported that 10·5 per cent. showed slightly sub-normal nutrition and 0·7 per cent. bad nutrition. But do the children in these categories include all whose health or physique is suffering from lack of proper food? Miss Green speaks of the deceptive air of mathematical exactitude which hangs about decimal places. The detection of the early signs of subnormal nutrition in clinical examination is acknowledged to be extraordinarily difficult. As Sir Robert McCarrison has pointed out, malnutrition is not itself a state of ill health so much as the cause of many states of ill health. In its early stages it may not give rise to any of the clinical symptoms enumerated in the Board of Education's Administrative Memorandum (No. 124) and yet it may be the cause of later disease and disability. One of the worst effects of prolonged malnutrition is that it decreases the resistance to infection and destroys the recuperative power of the body, but this is not a registrable symptom.

The writer of these pamphlets points out the significance of the fact that wherever a more thorough examination of school-children has been possible than the routine inspection (which averages only about six minutes for each child) the results show a higher percentage of defect. She instances the investigation into the health of 125 pre-school children from poorer homes in Newcastle. When they were tested by height, weight and general appearance, twenty-five were found to be unhealthy or physically unfit, but when blood and *x*-ray examinations were undertaken the number was brought up to forty-five. In some places—Wigan for example—special nutrition surveys which have been started on the Board of Education's recommendation have resulted in a substantial increase in the number of children judged to be in need of free feeding at school. The difficulty with these nutrition surveys however is that many children suffering from malnutrition may be missed in the first selection of children for the further examination. This selection is made in the classrooms and is based largely on facial expression, the least reliable of all physical signs of undernutrition.

Absence of a Normal Standard

Another difficulty in accepting the official estimates of subnormal nutrition is the absence of an objective standard of general well-being and the different interpretations put upon the word normal. To most medical officers the word probably means some sort of average, but the way in which personal factors may influence the scale is shown in one area where the number of children classified as below normal nutrition was more than twice the number of the previous year. Economic conditions in the meantime had improved, but the reason for the different assessment was that a new medical officer had been appointed from a less distressed district. How is it that Wiltshire shows 155 times as many children in the bad category as the adjoining Berkshire? Why have 48·3 per cent. of the children in Smethwick excellent nutrition and only 1·7 per cent. of the children in Reading?

Figures from various sources are brought forward by Miss Green to suggest that the number of children who suffer from dietary deficiencies is much larger than the 11·2 per cent. of subnormals in the official assessment. She also argues very convincingly on her statistics that, unless they are having school meals, children of unemployed families are very probably undernourished as an adequate diet cannot be purchased on the domestic budget no matter how carefully planned. She believes that perhaps 15 per cent. of school children are not only deprived of a sufficient quantity of protective foodstuffs but are also going short of calories or bulk food and that probably another 20 per cent., while they have a diet ample in amount, are not getting the first-class proteins, vitamins and salts necessary for growth, good health and resistance to disease. By simple dietary means the health of the school child could be raised to above its present level but to bring this about a start will have to be made with the mother and the pre-school child.

School Feeding

In the other pamphlet on the feeding of school children Miss Green traces the development of school feeding from the haphazard efforts of the nineteenth century to the Education (Provision of Meals) Act 1906 which gave local authorities powers to organize school feeding—powers which have remained practically unaltered to this day. Out of the 316 education authorities in England and Wales 172 make no arrangements for meals and sixty-nine do not provide free milk. The number of children who receive free meals or free milk or both averages 8·18 per cent. all over the country. In London it is 6·46 per cent. and the average in the county boroughs is 9·47 per cent. It is a miserably inadequate provision by whatever standard it is judged. A large-scale inquiry has shown that over 25 per cent. of children live in families in which the weekly income is 10s. or less per head. Sir John Orr found that in a sample of such families the diet was deficient for full health in every constituent examined and especially deficient in first-class protein and the protective foodstuffs.

Even among the authorities which do give free meals or milk the proportion of children fed does not always bear relation to the probable economic need. In the areas of thirty-five authorities with exceptionally severe unemployment the proportion of children obtaining free solid meals in 1935–6 was 2·7 per cent. the same as for the country as a whole but much lower than for other urban areas. Miss Green remarks that when one sees the barriers which have been set between the child and the provision of school meals the wonder is that so many children have them not that so few do.

The cheap milk scheme so far as it goes has been successful but it does not go far enough. Less than one-half the children are obtaining the milk; one-third of a pint a day is a miserable allowance and in the great majority of schools it is available only on schooldays which cover less than two-thirds of the year. Miss Green's proposals—which presumably have the endorsement of her council—include as a first step the provision of free milk for all children both on schooldays and holidays. Up to a pint a day should be given to children who can take it. She estimates that the annual school consumption of milk in Great Britain would be

140 million gallons (compared with 25 million gallons at present), and that if the industry could supply the milk at one shilling a gallon the cost to the Exchequer would be about £6,500,000 per annum, as compared with a State contribution at present limited to half a million She considers that there is a strong case also for the provision of free dinners—making the midday meal a part of the ordinary school routine and abolishing the need for any income or nutritional test The gross cost of such provision, estimated at £36,000,000 a year, might be regarded by some as beyond the realm of practical politics at present, but on the other side must be put the saving in the cost of medical services and the gain from increased economic efficiency She also insists that the services of trained dietitians working under the medical officer should be used as far as possible in drawing up the menus and organizing the service

Nova et Vetera

THE MEDICAL HISTORY OF MOZART

The recent publication by Reichner of Vienna, and its forthcoming translation by the Oxford University Press, of a facsimile edition of Mozart's own catalogue of his works recalls the sad fact that the composer died in penury and was buried hastily in a pauper's grave, having dissipated both his money and his health Wolfgang Amadeus Mozart (1756–91) forms a fascinating medical and psychological study, all the more intriguing perhaps because so many features of his story are obscure and may never be elucidated A precocious child, at the age of 4 he began to compose melodies which his father, a victim of gout, wrote from his dictation Two years later he made his first professional tour through Europe He had at least five attacks of infectious diseases, of which the first, in 1762, was probably scarlet fever In 1765, while in Holland, he suffered from what is described as *an inflammatory fever' followed by a relapse—probably* typhoid At the age of 11 he contracted small-pox during an epidemic in Vienna he was seriously ill and lay blind for nine days His quick recovery from these diseases and his apparent enjoyment of travelling, so fatiguing in those days, indicates a strong constitution Though physically healthy, Mozart was extremely nervous and highly strung He had a dread of the sound of a trumpet, becoming alarmed even to see this instrument handled At its first blast he turned deathly pale and fell to the ground in a faint Subject to colds, he was at times greatly irritated by neuralgic toothaches

Small and frail in body, Mozart possessed a comparatively large head and an enormous nose His face was pale and exceedingly mobile, changing its expression every moment, though frequently he wore a vague, distracted look An intense playful genius, he was fond of life and of the pleasures of living He loved dancing, billiards, and the society of fair women Though his character on the whole was fickle, and though towards the end of his life between fits of terrible depression he indulged in wild pursuits of sensual happiness, reports of his conjugal infidelity are exaggerated He is described as having drunk to the point of exhilaration but not beyond Overworked and underpaid, he kept late hours composing and gradually ruined his health

Pathological Speculations

In his illnesses he was attended by Dr Sigmund Barisani, a connoisseur in music, and by Gerhard van Swieten who is said to have been a great friend of the poor, but a poor friend to the great Mozart In 1791 the composer wrote his famous Requiem Mass in the conviction that he was dying having been poisoned by his enemies and rivals He was but 30 years old, and already his days were numbered He complained of headache, and his hands and feet began to swell At times he was unable to move, and he vomited a great deal Several times he swooned, losing consciousness for a few minutes, but whether these attacks were simply in the nature of syncopes or were uraemic fits is debatable Though the late Dr James Collier included Mozart in his list of the famous who have been provedly or reputedly epileptics, for this the evidence which would satisfy the scientific mind is meagre in the extreme His last illness has been variously termed "malignant typhus," "rheumatic fever," and "consumption," and in the official records it appears as a "cerebral fever" The post mortem examination showed nothing remarkable beyond inflammation of the brain No mention is made of the kidneys, which may have been overlooked or only cursorily examined It is possible, therefore, that Mozart might have been a victim of uraemia, his kidneys having been damaged by the attack of scarlet fever in childhood

His pauper's grave was left without a memorial, and the legend is circulated that his corpse had been violated so that a certain physiognomist might add this interesting skull to his collection This rumour recalls a similar fate which befell the mortal remains of Josef Haydn Two days after Haydn's burial Johann Peter, superintendent of the imperial prisons at Vienna, amateur phrenologist, stole the composer's head in order to study the "musical prominences" at the temples, and on his death bequeathed it to the Museum of the Anatomical Institute, revealing its identity Later it passed into the hands of the city's Society of the Friends of Music, and has recently been given to Prince Paul Esterhazy, in whose family estate at Eisenstadt Haydn's headless body has lain buried for 118 years Next spring a mausoleum will be completed in the parish church in which the remains of the composer are to be united 129 years after his death

MEDICINE IN ICELAND 100 YEARS AGO

At a meeting of the Academie de Medecine on August 4 1838, reported in the *Gazette Medicale de Paris* of August 11, Dr Wortenson, a distinguished practitioner of Iceland, gave the following information concerning his country The most frequent cause of death was catarrhal fever and acute and chronic bronchitis Phthisis, on the other hand was very rare The next commonest disease after catarrhal fever was chronic hepatitis, which often ended in suppuration Recovery however, was fairly frequent The most remarkable circumstance in the medical topography of Iceland was the excessive and sudden variability of the temperature which accounted for the frequency of catarrh in all diseases Rheumatism was extremely common, and often showed an epidemic prevalence with catarrhal fever and was in no way improved by bleeding In spite of the habitual humidity of the atmosphere and chronic enlargement of the liver, intermittent fevers were unknown in Iceland and, strange to say foreigners suffering from them were cured without the aid of drugs A very frequent and severe disease in Iceland but confined to one part of the island was tetanus neonatorum which usually appeared on the sixth day after birth and was not often fatal Puerperal fever was rarely seen Hydatid cysts sometimes of considerable size, were fairly frequent, and were situated in the neighbourhood of the liver or other part of the abdominal cavity Venereal diseases were quite unknown Leprosy was fairly common Plague had twice visited Iceland, but on both occasions was confined to one part of the island

One hundred and fifty years ago David Pitcairn (1749–1809) physician to St Bartholomew's Hospital first drew attention to the relationship of rheumatism and heart disease As he never published anything himself it fell to Matthew Baillie to record this original observation in 1797

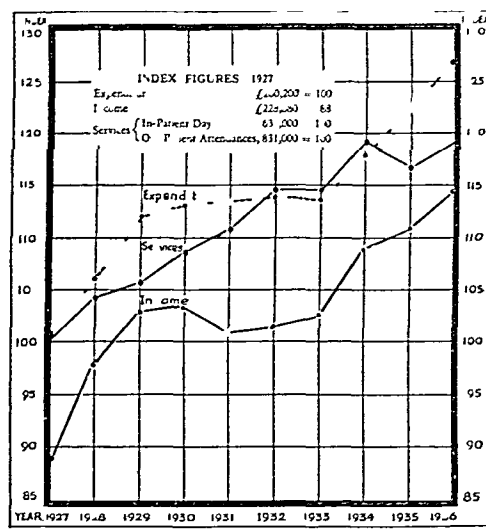
ENGLAND AND WALES

Royal National Hospital for Rheumatic Diseases

A ball will be held on Tuesday October 18 in aid of the rebuilding fund of the Royal National Hospital for Rheumatic Diseases Bath when the Duchess of Kent will attend This hospital was founded by Beau Nash about two centuries ago and the original buildings are now dilapidated and unsuitable for modern requirements A new site has been obtained in the lower part of the city, and a sum of £200 000 is required for building and equipping the new institution It is stated that only 3 per cent of the patients come to it from the city of Bath whereas one fifth of the total are received from South Wales and one sixth from the London area The ball will be held in the historic Assembly Rooms, Bath which have been closed and are now to be reopened The last occasion on which a member of the Reigning House was present at a ball in Bath was in 1796 when the then Prince of Wales afterwards King George IV, attended a ball in the Upper Rooms (the Assembly Rooms), and 1 200 people were present a number which it is hoped to approximate on the coming occasion in view of the fact that the hospital is truly national in respect of the wide area from which its patients are drawn The price of the tickets is £3 3s it bought before October 1 or six for £15 15s They may be obtained from the Registrar's Office at the Royal National Hospital for Rheumatic Diseases Bath An eighteenth century interlude will be staged during the evening as an attempt to recapture the glamour of old Bath when the Rooms were originally opened

Liverpool Psychiatric Clinic



The report (1937–8) of the Liverpool Psychiatric Clinic states that the period under review has been progressive and eventful The transference of the institution to new premises more spacious, pleasant and well equipped at No 1 Abercromby Square has facilitated a considerable expansion in the number of cases treated Attendances reached the record total of 2 813 including 300 new patients The report records an important addition to the medical staff in the person of Dr Elizabeth Berndt of Berlin a distinguished German psychiatrist and an expert in the methods of psychotherapy practised by Professor Jung of Zurich During October 1937 a course of lecture discussions was delivered at the clinic dealing with psychological medicine from the standpoint of the general practitioner Weekly clinical demonstrations were also arranged It is hoped further to extend the teaching services of the clinic in the near future Among the conclusions drawn in the report it is pointed out that the high proportion of cases of adolescent instability indicates that this is a social problem for which special provision as regards diagnosis and treatment requires to be made that a large number of the cases for which social organizations are seeking help are those of behaviour disorders in girls, and that parental loss and illegitimate birth appear to play an important part in adolescent instability

London Hospitals Street Collections

By means of flag days organized in the streets by individual hospitals citizens of London have in the past been in the habit of contributing large sums chiefly in pennies for the upkeep of their hospitals These have now been combined, and by means of the scheme that has evolved under the London Hospitals Street Collections Central Committee both in 1937 and in 1938, so far as the collections have been completed more money has been obtained for the hospitals The general hospitals organized their combined Flag Day in May and arrangements for the special hospitals section on October 11 next are now being made Already Lord Luke chairman of the central committee has received many valuable offers of help Posters are being displayed by most of the local public authorities situated in the Metropolitan Police District which comprises the area to be covered and many large advertisers are giving similar assistance Further publicity has again been promised through cinema theatres Many West End hotels business houses and other centres have granted facilities for selling depots and collections on their premises This year fifty-seven special hospitals are combining their flag days on October 11 as compared with thirty three last year nearly one hundred general hospitals combined in the May collections Suggestions and offers of service will be welcomed by Lord Luke, at 36 Kingsway London W C 2 the headquarters of the London Hospitals Street Collections

The Merseyside Hospitals

A complete survey of the activities of the Merseyside Hospitals Council is contained in the annual report for 1937 (Merseyside in this context means Liverpool, Birkenhead Bootle and Wallasey) Some idea of the extent of the work may be obtained from the fact that the council handled last year an income of £194 000 A vital part of its operations indeed the very basis of them is the penny in the pound fund and the increase in the contributions under this heading was £12 656 Not the least of the activities is that connected with what is known as reciprocal agreements hospital contributory schemes in 122 other cities and towns have entered into written agreements with the Merseyside Hospitals Council to ensure

Graph depicting the increase in hospital services income and expenditure of the Merseyside Associated Voluntary Hospitals 1927–36

that the contributors on Merseyside and in the reciprocating cities and towns may have free hospital service if they need it when away from their home surroundings Excellent results too have been achieved by the 700 voluntary receiving depots established in the premises of shopkeepers whereby 45 000 people unable to contribute to the penny in the pound fund through places of employment have been enabled to buy weekly stamps near their homes and so secure the right to free maintenance on admission to hospital But every increase in the fund adds to the responsibilities of the council and there

is little improvement in the proportion of the cost of maintenance which it can contribute to the associated hospitals in return for the increasing volume of service they in turn give to contributors and their dependants So long as the employed population contribute less than the cost of the service they receive from voluntary hospitals the balance must, if possible, be found by legacies and private subscriptions The problem of hospital finance is becoming more and more acute, notwithstanding the contribution from the council s funds, amounting in 1937 to £104,656, an increase of £8,592 over 1936 In addition to this the council allocated £8,446 to the hospital visiting medical staffs in recognition of their services to contributors The report suggests that if the voluntary hospitals system on Merseyside is to continue there must be a substantial increase in the ordinary revenue, or an upward trend in the receipt of legacies, or a curtailment of the work undertaken by the associated voluntary hospitals

Supervisors of L C C Midwives

Hitherto the L C C has employed four medical officers in connexion with the supervision of midwives and allied work One of these officers has recently retired, and another is due to retire shortly The volume and character of the work have been considerably affected by the introduction of the council's midwifery scheme The supervision of the domiciliary midwives appointed by the council is necessarily more complete and systematic than in the case of the independent midwives, and more detailed than formerly in the case of midwives employed by voluntary organizations It is not possible at present to indicate the supervisory staff which will ultimately be required, but it is proposed that for the present two positions of non-medical supervisor of midwives be created in substitution for the two positions of assistant medical officer referred to above Under the revised arrangements the two remaining assistant medical officers will each become responsible for the general supervision of the midwives in one-half of the county area The non-medical supervisors are to receive a salary of £375-£25-£475, but if they have special experience of the specific duties concerned the first two appointments will be at the commencing salary of £400

Medical Society of London

The first half of the session 1938–9 of the Medical Society of London will open on Monday, October 10, with the annual general meeting at 8 p m, followed by Dr C E Lakin s presidential address at 8 30 p m On Monday, October 24, at 8 30 p m, a discussion on sulphanilamide, its use and its misuse, will be introduced by Sir William Willcox and Mr Eardley Holland A discussion on hormone therapy in gynaecological conditions will be opened by Mr Douglas H MacLeod, Dr P M F Bishop, and Mr W R Winterton on Monday, November 14 at 8 30 p m A clinical meeting will be held on Monday, November 28, at 8 p m On Monday, December 12 at 8 30 p m Mr E Pearce Gould and Dr T L Hardy will introduce a discussion on preliminary investigation in cases of malignant disease of the breast and stomach The Lettsomian Lectures, on the surgery of the gall-bladder and bile ducts will be delivered by Professor G Grey Turner on February 20 and March 1 and 6, 1939 Professor John A Ryle will deliver the annual oration on "Clinical Sense and Clinical Science" on Monday, May 8

A new illustrated pamphlet on Torquay as a health resort and residential centre is issued by the Baths and Publicity Committee of the Corporation with the approval of the Torquay Division of the British Medical Association Copies may be had free of charge from the general manager, Marine Spa Baths Torquay

Correspondence

Convalescent Serum in Infantile Paralysis

SIR —The dogmatic statement made by Drs Donald Paterson and Macdonald Critchley in their letter to the *Times* of August 8 seems imperfectly justified They state "The disease [infantile paralysis] is not one that yields to any known treatment which needs to be applied within the first few days of onset" As an orthopaedic surgeon I see so many of the tragic results of this disease that I regret this out-of-hand condemnation of early treatment, including treatment by serum, which alone seems capable—once the disease has provoked the "spinal sign"—of aiding natural resistance *I have dealt with* the advantages of early absolute immobilization elsewhere (*Proc roy Soc Med*, 1922, **15**, 59) I feel that the value of convalescent human serum, which has under certain conditions (Macnamara, J, and Morgan, F G, *Lancet*, 1932, **1**, 469, 527) given results suggesting great potency, has not been lessened by records of subsequent series of cases treated under different conditions and with different techniques, although the later series were larger and more evidential *qua* controls My own experience with convalescent serum used on the lines suggested by Dr Macnamara has been very happy, though relatively small and without controls For these reasons I asked a distinguished bacteriologist if he would review the literature He has been good enough to do so, and he writes in a covering letter "There is little doubt that complete finality in the matter has not been achieved The reading has shifted my view somewhat in the direction of reserved scepticism, and I think it justifiable from the clinical point of view to continue the use of serum I think I should feel glad if it were available for any person in whom I was interested" His report is as follows

1 In the light of the published facts any individual is justified in holding the personal opinion that convalescent serum is ineffective, because those tests that have aimed at and approximately achieved experimental conditions, with controls truly comparable to the treated cases, have failed to prove its efficacy a positive proof was to be expected if serum really 'works' No other reports have much evidential value since they all make comparisons of essentially dissimilar groups of cases and are coloured by enthusiasm for a new remedy

2 Since none of these tests actually achieved perfect 'experimental conditions, owing to the enormous difficulties and the multitude of variable factors involved, it also remains open to any individual to refuse to accept them as final This, in fact, was the attitude of almost all of those who carried out the tests

3 Examples of these uncertainties are the uncontrollable variation in the potency of serum samples, differences in the size of the dose and in the time and repetition of administration, and variably correct diagnosis of the pre paralytic stage Thus success might be dependent on these factors being exceptionally favourable and failure inevitable if they are less favourable This, though only a surmise, is a justifiable one

4 The fact that each of the several determined attempts to prove scientifically the efficacy of the serum failed to do so has necessarily induced an unbelieving attitude in most detached observers including myself to whom the balance of *probability now seems against* the serum But nothing short of a new large scale and very perfect experimental test would justify a dogmatic statement that the serum has no value in the disease

In my view variations such as those enumerated in paragraph 3 may well prove to be of critical importance the following points should also be mentioned

(*a*) The examination of muscular power should be carried out very carefully and thoroughly by someone experienced in this work if one is to be sure that the case was truly at a pre paralytic stage

(*b*) The serum to be used must be fresh and must have been obtained from fairly recent (say less than four years) convalescents from indubitable acute anterior poliomyelitis due to the same type of poliomyelitis virus—that is it must be potent in antibodies to the existing infection

(*c*) The serum is probably better without antiseptic preservation because large intravenous doses of this low titre serum must be given and to avoid meningeal irritation from the intrathecal dose

(*d*) There must be no delay between the diagnosis and the administration of serum The needle used in the diagnostic lumbar puncture should not be withdrawn until if the bedside cell count confirms the clinical diagnosis a volume of serum a little greater than that of the cerebrospinal fluid withdrawn has been injected

(*e*) A massive dose of this low titre human convalescent serum must be given by intravenous administration if the antibody value is to be comparable to the dose of tetanus antitoxin recommended by Cole (*Proc roy Soc Med* 1937 **31** 59)

Daily contact with victims of the greatest of all physical disasters that can happen to a healthy child has made me venture momentarily out of my proper sphere but I do appeal for a further use of potent serum without post puncture delay and in massive doses—I am, etc

Oxford September 1 G R GIRDLESTONE

"A Mere Examining Body"

SIR—In the *Journal* of September 3 (p 483) Sir Walter Langdon Brown in the course of a would be destructive criticism of examinations in general writes We had already travelled far from the point of view which underlay the original attitude of London University indeed it seems incredible to day that a mere examining body should ever have been regarded as a university The enormous building now rapidly rising in Bloomsbury shows how far London University itself has left such an attitude behind His thesis would seem to be that because the senate house and other portions of the new headquarters of the University are approaching completion demonstration is afforded that the attitude of the University towards its traditional examination system has radically altered Was there ever a more absurd *non sequitur*?

I can assure Sir Walter categorically that the University's attitude in this respect has in no wise changed since its foundation a hundred years ago with the express purpose of bringing higher education to large sections of the community then debarred from admission to the older universities by sex creed or race That it has fulfilled this high purpose to admiration throughout a century of activity is clear from the volume of appreciation from all parts of the world which it received in the centenary celebration in 1936 It is an ironical comment on Sir Walter's contemptuous reference to the University—before its reconstitution in 1900—as a mere examining body that it is precisely in medicine that that mere examining body achieved its greatest success Its medical degrees (and all London graduates of more than forty years standing are graduates of the examining body which for the past twelve years has given both the Royal Colleges their presidents) rapidly won such an outstanding prestige both at home and in our Dominions overseas, that the older universities, which a hundred years ago had allowed their medical degrees to become merely farcical as tests of professional competence * were obliged to change their attitude to examinations in conformity with the methods and example of the new London University The only change that the reconstitution in 1900 effected was that certain London schools were made part of the new dual University which however in no sense relinquished the function previously exercised of granting degrees on examination to students whom it had not taught This function continues to be discharged uninterruptedly by the external side of the present dual University under the general direction of the External Council In the current year 12 800 matriculated students have been registered as pursuing courses of study for external degrees of the University—a total considerably larger than the combined student body of Oxford and Cambridge estimated in the University Grants Committee's latest return as 10 813 (Oxford 4 920 Cambridge 5 893) If Sir Walter objects to this principle how does he justify the medical qualifications given by the Royal Colleges in London—which remain mere examining bodies—or indeed the practice of the older universities in granting qualifications in medicine to students whom they have not trained in the most important part of the curriculum—namely the clinical subjects—for which the older universities uniformly send their students to the schools of London University? Sir Walter himself was taught his medicine in a London University school he was examined at Cambridge—I am etc,

E GRAHAM LITTLE M D
Ramsgate September 4 Chairman of the External Council London University

* See Halevy *A History of the English People in 1815* Pelican Books vol 3 pp 178 *et seq* Neither University educated doctors If future doctors spent a short period at Oxford or Cambridge it was either under the compulsion of the rules of their profession [only graduates of the ancient universities were admitted to the Fellowship of the Royal College of Physicians of London] or because it was the correct thing to do from the social standpoint

At Oxford and Cambridge a medical faculty was for all practical purposes non-existent the lectures mere monologues of oratory the examinations a farce The two Royal Colleges in London were exclusive and reactionary corporations in close alliance with Oxford and Cambridge not for the encouragement but on the contrary for the obstruction of scientific progress

SIR—In the course of his article on the medical curriculum, Sir Walter Langdon Brown writes We had already travelled far from the point of view which underlay the original attitude of London University indeed it seems incredible to day that a mere examining body should ever have been regarded as a university Oddly enough when the incredible University of London was chartered the University of Cambridge was also a mere 'examining body The Colleges had already revived serious education but the university officers as such had little or nothing to do with teaching they effected their reforms by improving the system of examination When the great scholar Porson was professor of Greek at the end of the eighteenth century his sole duty was that of examiner (see Clarke's *Life of Porson* 1937 p 40) Indeed so far as concerns a large majority of its medical students down to our own day Cambridge University has confined itself to testing their clinical proficiency It is good fun to heave bricks at early Victorians but more intelligent to try to understand their incredible actions An article on London University published seventy years ago by one of her most distinguished graduates, Walter

Bagehot, is less known than it should be (see his *Collected Works* vol vii, pp 286 *et seq*)

'Every generation is unjust to the preceding generation,' wrote Bagehot It respects its distant ancestors but it thinks its fathers were quite wrong Just so with London University We who were educated at it grumble at much of it I at least have often done so, and have often heard others But yet I know well how much the founders of the University have done how difficult in their case was every sort of success how easy every sort of failure Thirty years ago it was a great step to establish an independent and examining University That improvement was a purely English idea, but like so many English ideas, it existed only in solution, it was there but it was hidden

He goes on to explain why this was a great step, and why it was impossible to do more

In 1938 we can do things which were impossible in 1836 and difficult in 1868, but that is no reason for sneering at what was done in 1836 Horses are not incredible means of transport because we have aeroplanes, people did travel, and travel far, on horses before we had aeroplanes, and there are still parts of the world where one must travel on horseback or not at all Nobody with educational experience needs to be reminded of the defects of 'mere examinations, but the educational system of a great Empire presents simultaneously different levels of development At one level an impartial system of "mere examinations is a valuable instrument of progress That level exists in many places still, and education still owes much to the incredible system of 1836—I am, etc

Loughton, Sept 5 MAJOR GREENWOOD

Bennett's Fracture

SIR—Two communications published in the *Journal* of August 27 were of personal interest to me The one on fractures of the thumb and fingers by Mr David Trevor (p 461) was useful and instructive for others in addition to those for whom it was intended It was particularly so to myself for I sustained a Bennett's fracture of the thumb in 1931, which disabled me for twelve months The other communication was from Mr J C Nicholson on fracture of the neck of the femur with an account of his personal experiences during treatment (p 464)

At the time of my comparatively trivial accident I thought as Mr Nicholson thinks, that the personal experience of a surgeon as a patient is helpful in the treatment of others and I published "the case Mr Nicholson believes as I did that it is of value if treatment is approached from the patient's rather than from the surgeon's point of view He describes vividly his reactions to sandbags to weight extension plaster-of-Paris, and nailing He makes interesting comments on the various stages of a prolonged and trying ordeal We read recently from the pen of a surgeon, the tragic sequence of events after he had undergone treatment with radium for carcinoma I hope we will have further opportunities to study the comments of patients who belong to the ranks of the medical profession By such a study our judgment is reinforced and our methods of treatment become more elastic and adjusted to suit the individual case To emphasize the importance of matters which are often regarded as side issues during the treatment of our patients I give a short account of my own experiences after sustaining a fracture-dislocation of the thumb Following the accident I realized that permanent incapacity as a surgeon might result The literature teemed with references to permanent disability even when reduction of the fracture was complete

The displacement was reduced under local anaesthesia, and subsequently was readjusted under a general anaesthetic The treatment was undertaken by an expert, who obtained perfect reduction and for whom I have the greatest regard The thumb was held in orthodox fashion—abduction and extension—by plaster-of-Paris in which a wire gallows was incorporated About a fortnight later, probably through some fault of my own the plaster lost its grip and the fragments slipped The plaster was removed The thumb felt now as it did before reduction as if a pair of scissors could never be employed, as if the tying of ligatures would prove impossible, and as if securing a vessel with forceps was out of the question Attempts to oppose the thumb to the other digits were futile The tip of the thumb could just approach the side of the index finger and no more I reflected on the many times I had taught students that a hand without a thumb was little better than a hook We forget, but the patient cannot do so that disablement of one thumb reduces the utility of the other hand by about 50 per cent Collar studs bootlaces, and braces were among the many trivial items which become unmanageable No further attempts were made at reduction Hope eternal rested upon occupational treatment The hand was immersed in a basin of water at a high temperature in which lay various surgical instruments Feeble efforts were made many times a day to open and close forceps to tie ligatures, and to divide them with scissors In the intervals, with the support of a tight elastic dressing the thumb was coaxed to perform other duties After seven weeks with the support in situ reinforced by two rubber gloves a minor operation was attempted with the aid of a colleague It was a child like performance Pain and awkwardness persisted for six months, but after twelve months all disability had disappeared

I can well understand Mr Nicholson's strong objection to a big hip plaster, and I was impressed with the emphasis of his condemnation In a minor way I suffered from similar discomforts

At one time, about thirty years ago, I saw plaster applied to all and sundry, and it was used largely for the ambulatory treatment of fractures In recent years there was a revival owing to the obvious merits of the methods described by Bohler Nevertheless experience has encouraged me to employ more frequently the splints and appliances recommended by the late Sir Robert Jones The contraindications to the use of plaster became more apparent At the time of my injury I knew of no efficient splint for Bennett's fracture I designed a simple apparatus, which has proved useful in practice Briefly, it is an aluminium gutter splint with a large aperture at the distal end It is applied laterally to the forearm with the thumb protruding through the aperture A wire gallows is attached which maintains the thumb in extension and abduction The method of reduction and application of the splint has been described (*Med Pr* July, 1933, p 90, *J Bone Jt Surg*, **19**, April 2, 1937) The treatment advocated by Mr Trevor has powerful support, but as a patient I would have pleaded with him against the stirrup transfixing the pad of the thumb as a means of extension These stirrups are made to perfection, but I have always disliked skeletal traction, extension from the finger-nails, or transfixion of the soft parts, as regards the thumb and fingers Transfixion of the thumb may give an eerie feeling to a surgeon when he is the patient Simple adhesive strapping and tapes, or one of the many finger extension traps, suffice as a rule—I am, etc,

London, N W, August 28 W I DE C WHEELER

Treatment of Ganglion

SIR—I read with great interest and profit Mr E Peake Gould's excellent article on the treatment of tenosynovitis and ganglion in the *Journal* of August 20 (p 415) The

are a good number of cases of ganglion which do not respond to the thumb pressure method and the patients object to the scar of a dissection I have found that the old fashioned seton is most useful Depending on the size of the ganglion one two or three silkworm gut sutures are passed through the ganglion at intervals of about a quarter of an inch Each suture is knotted to form a loop of about 1 inch in diameter and is drawn through about half its circumference daily A good deal of the jelly comes away on passing the sutures and leaks into the dry dressing afterwards The sutures set up a reaction in the tissues of the ganglion and the space is obliterated Whether this reaction is a septic or aseptic one I do not know, but I have never seen pus formation Failures are few The silkworm gut is usually removed about the seventh day, and the only scar is a white puncture mark at the site of the stitch holes I have never seen a simple ganglion in the front of the wrist, so the above remarks do not apply to that site —I am etc

Longtown Cumberland August 20 R RUTHERFORD

Reduction of Backward Displacement in Colles's Fracture

SIR —I was much impressed with Mr R A Fitzsimons s article dealing with Colles s fracture (*Journal* August 13 p 357) He rightly stresses that the majority of unsuccessful attempts at reduction are due to the application of insufficient force rather than to insufficient skill, but he then goes on to say There is no danger of over reduction of backward or outward displacements Strengthened with this statement I reduced in this hospital under a local anaesthetic a severe Colles s fracture with much backward and outward displacement, and after a plaster had been applied a radiograph was taken which showed the fracture had been over reduced, and had in fact, been converted into a Smith s fracture Hence I would point out there is a danger of over reduction —I am, etc

Sulphonamide Chemotherapy in Gonorrhoea

SIR —I was greatly interested to read the observations of Dr G L M McElligott and Mr A J Cokkinis in the *Journal* of August 20 (p 424) on the comparative results of treatment of gonorrhoea with sulphanilamide, uleron and M & B 693 I have used all these drugs in a fairly large number of patients suffering from acute gonorrhoea mostly in male cases My experience has shown that sulphanilamide is much the most toxic of the three drugs that uleron is relatively non toxic and that M & B 693 is only slightly toxic With all three drugs I have never seen a case of toxic neuritis but then, like Dr Hanschell s, most of my patients have been seafarers, and possibly they may have developed neuritis after their return to sea

In my experience sulphanilamide produces toxic reactions of varying degrees of severity in a high percentage of cases so much so that many patients have to stop taking the drug or drastically reduce the dosage The usual dosage which has been adopted is that advocated by Dees and Colston—5 grammes daily for two days, 3 5 grammes daily for the next three days, and 2 5 grammes up to the thirteenth day

Uleron was used in another series of cases using the stoss dosage of six tablets daily for four days repeated after an interval of six days The results were for the most part disappointing, relapse being quite common In many cases the discharge cleared rapidly but the urine contained many pus threads from infected Littre glands Toxic reactions were almost non existent and when present were very slight

M & B 693 was used in a further series of cases the dosage being six tablets daily for five days If a good response was not obtained in this time further treatment with the drug appeared to be of no avail Toxic reactions were more frequently seen than with uleron but much less frequently than with sulphanilamide The commonest was severe headache which persisted for at least twenty four hours after stopping the drug The results obtained were definitely superior to those obtained with either of the other two drugs

With all these drugs results vary considerably and it is difficult to explain why two cases of acute early gonorrhoea should respond so differently to the same treatment One can never be sure that any particular case will respond at all It would appear that littritis is much more frequently seen as a complication in patients treated with these drugs alone than in those cases who are given irrigations in addition Perhaps after all the ideal method may prove to be irrigation for the first couple of weeks followed by one or other of these drugs The diversity of the published results would appear to suggest that much more research has still to be done —I am, etc

Liverpool August 22 ERNEST E PREBBLE

SIR —We are both grateful for and gratified by Dr H M Hanschell s kind appreciation of our paper in the *Lancet* of August 13 (*Journal* August 27 p 474) The already inordinate length of this article was the only reason why we did not add an account of our uleron cases but we hope soon to be in a position to publish a comparative analysis of our cases treated by sulphanilamide uleron and T 693 However we feel we must rise to the fly (or is it red herring?) so aptly cast by our friend Dr Hanschell to the extent of giving a few figures of our first hundred consecutive cases treated with uleron

Of the hundred cases eighty showed initial improvement amounting to apparent cure while twenty failed to respond at all to the drug Coming to final figures, and excluding eighteen who defaulted or were transferred during tests of cure or the follow up period 44 per cent were discharged as cured while 56 per cent proved to be final failures While not attempting a detailed analysis in a letter our total experience indicates that the response of gonococcal infections to uleron is much more capricious than that to sulphanilamide The stage of the disease the daily dosage the length of continuous administration the number of stosses or the intervals between them, appear to play little part in determining the final result Indeed some of our most spectacular cures have occurred under unfavourable circumstances (first week of disease) and with minimal dosage while there were many disappointing failures after adequate dosage given in multiple stosses, in the subacute and chronic stages of the disease

With regard to our five cases of peripheral neuritis one occurred four days three in the third week and one in the fourth week after cessation of uleron treatment —We are etc

Complications of Chemotherapy

SIR —The annotation on chemotherapy in gonorrhoea in the *Journal* of August 6 (p 294) stressing the inherent

risks in the uncontrolled use of modern drugs of the sulphanilamide type is most timely To all those who have studied recent articles on their clinical application it will be apparent that the incidence of generally recognized complications is invariably higher in ambulatory patients This suggests that it might be desirable—although under actual working conditions it is probably impossible—to restrict the use of these drugs to patients confined to bed As a first step it might be more practical to suggest clinical research into the best methods of preventing or neutralizing these toxic effects A further point which has been apparent to me during recent work on chemotherapy concerns the cerebral depression which, in a few days or weeks not infrequently follows the therapeutic use of sulphanilamide in patients normally possessing, and requiring, a high degree of mental acuity That this phenomenon is just the after-effect of a severe illness is hardly likely since cases have occurred after relatively mild conditions, such as streptococcal sore throat, for which sulphanilamide has been used, and the depression is most pronounced following ambulatory treatment So far I have not seen any published account of this rather disquieting complication, but I hope in time to collect adequate statistical evidence to demonstrate the point more conclusively than is possible in a letter—I am, etc,

Norwich, August 27 W R THROWER M D, M R C P

Orthopaedics in Rheumatoid Arthritis

SIR—In Mr Norman Capener's paper under this title in the *Journal* of August 20 (p 391) reference is made to the correction of flexion deformity of the knee

Mechanical or splinting methods can be best applied to contractures of only mild severity In cases of severe degree the chief risk is of pressure sores Manipulation, if used at all is best used as a tentative adventure in skilled hands and only in the mild cases That manipulation is not without danger is attested by instances of fracture I have known of a fatality presumably from fat embolism occurring after a gentle attempt to extend a flexed rheumatoid knee Recurrence of the contracture is always to be feared if complete extension is not achieved In my own experience I have found the operation of posterior capsuloplasty as described by P D Wilson (*J Bone Jt Surg* 1929 **11**, 40) of great service in certain selected cases of resistant and severe flexion contracture It should be done only after the disease process has become quiescent and when the general physical condition is good Supracondylar osteotomy of the femur is also a recognized method for the correction of fixed contracture of the knee It allows the condyles of the femur to be rotated forward, thus bringing the knee into complete extension It does not increase the rate of movement but places it at the point of greatest functional value The method of Osgood (*Amer J orthop Surg* 1913 **11** 336) is to be recommended If there is much atrophy of bone osteotomy is inadvisable

Arthroplasty excision of the elbow can be a very satisfactory operation A Kocher incision is made The lateral ligaments are preserved as far as possible An ample amount of intervening bone is removed To preserve lateral stability the lower end of the humerus is cut in the form of an inverted U or V leaving the lateral epicondyles and enough bone beneath to give them strength Horsley's wax may be rubbed into the raw surfaces or a double layer of fascia lata employed In the after care there is no need to hurry in obtaining motion My practice is to keep the joint quiet for seven to ten weeks in a posterior moulded plaster splint This gives time for all reaction to settle down The movements quickly return it may be by the initial assistance obtainable from putting the joint very gently through its movements under an anæsthetic The disease process should be quiescent before the operation is attempted

Rheumatoid arthritis generally occurs in the slender congenital visceroptotic type of individual One must suppose that this type, for a number of reasons, is less able to withstand the many stresses of life than the normal or the sthenic type of individual Whether it be cause or effect, one notices that almost invariably such cases have very poor posture and tone In treatment I regard it as important that the "deranged mechanics of the physiology should be corrected During their institutional care, in suitable centres, a gradual process of reconstructive rest should be instituted, aiming, above all, at restoring a spreading out of the subcostal angle and proper diaphragmatic action

Thrice daily for an hour a pillow is placed beneath the thoracic spine and the patient lies thus with the hands clasped behind the head The mattress should be firm Instruction is given in the correct methods of breathing and also in simple lying-down exercises so that the patient may obtain a sense of active voluntary control of the muscles of the lower back abdomen, and trunk Gradually the whole appearance of the body improves, and the patient begins to lay on fat in the upper abdomen with improvement of visceral and muscular tone A posterior moulded plaster shell is made for the trunk to support the loins and to maintain the improved statics When the patient gets up she is instructed in the control exercises necessary to preserve an habitually improved posture being assisted at first by a light posterior spinal brace and corset

The orthopaedist should do much more than prevent or correct the deformities of joints in rheumatoid arthritis His knowledge of the correlation of the structure and function of the body is needed to-day in framing a national policy of physical education, so that susceptible subjects, and indeed everybody, may have their lives wisely guided in this and in other respects, in particular, as to how to use their bodies, not in a constant state of physiological deformation, but at the highest potential of right use It is the orthopaedist who should understand and encourage the technical measures required in the physical reconstruction of the chronic patient, by restoring the faulty posture and poor tone so frequently existing This is a complete art in itself, consisting of measures of reconstructive rest, re-education, and support until right use has been re established It is not to be left to the physiotherapist The chronic patient remains a perpetual challenge and reproach to us, and I would submit that he will remain so until there is an appreciation of the value of employing the medical orthopaedist combined with the physician in the treatment of these cases These matters are well understood in certain parts of America, as in Dr Loring Swaim's clinic at the Robert Bent Brigham Hospital Boston One rarely hears the matter discussed in our country, and yet the results under such conditions can be most satisfactory Our own orthopaedic surgeons should give a lead in regard to physical education and the broad reconstructive measures required in the chronic medical class of case Is this not preventive and curative orthopaedics in the best sense?—I am, etc,

Edinburgh, August 26 W A COCHRANE

Rheumatoid Arthritis and Jaundice

SIR—The following case may intrigue those who are interested in the treatment of rheumatoid arthritis with vaccines

A male patient of mine has suffered from rheumatoid arthritis of gradually increasing severity for some four years (he is now 62), and has been under every possible treatment—including spa therapy, physiotherapy various vaccines etc not to mention a host of infallible advertised remedies—except gold In February of this year Dr W M Crotton saw him with me and had an autogenous polyvalent vaccine made for him The patient was extremely

sensitive to his vaccine and I had great difficulty in getting him going but by Tuesday April 5 I had reached a dose of 4 millions The result of this dose I had better give in the patient's own words

Nothing happened on Wednesday but I woke up on Thursday with a severe headache and aching pains all over and with great lassitude—as if I were in for an attack of influenza By evening the muscles of my chest felt contracted and I had a feeling of suffocation as if I were tightly bound with ropes or in a vice and I could only speak in shortish gasps

Friday—No change and no alteration

Saturday—Very little better

Sunday—Felt pretty well done in and horribly sick but did not vomit I could not eat but wanted to keep drinking I noticed my skin looking yellow

Monday—I was a deep yellow colour all over including my eyes The feeling of constriction gradually went off but for several days I felt too ill to eat and did not feel my usual self for a good fortnight The jaundice disappeared entirely

I had another injection on May 3 and in another two days had a repetition of the reaction I have described and another attack of jaundice but in a milder degree and with more rapid recovery Since these two attacks of jaundice I have been very agreeably surprised at the very steady and definite progress I have made towards recovery there has been a decrease in pain and an increase in flexibility I am quite satisfied that I was improving under this treatment before the attacks of jaundice but not to anything like the same extent as I have since

I have continued with his vaccine very slowly and carefully and have reached a dosage of 7 millions without any reactions beyond slight focal effects He is still making steady and practically uninterrupted progress which after forty years is to say the least of it, encouraging —I am etc,

Chippenham August 29 GEO LAURENCE

SIR—We have read with great interest the article by Dr Philip S Hench on the effect of spontaneous jaundice on rheumatoid arthritis in the *Journal* of August 20 (p 394) Dr Hench discusses various ways in which experimental jaundice may be produced but he does not mention the toxic jaundice which is often seen in gold treatment In our experience of nearly 1 500 cases treated with gold salts jaundice has occurred in 119 We are not here concerned with the mechanism of the jaundice If however the claims of Dr Hench are valid our own series should provide evidence in their favour and one would expect that those patients who develop jaundice would show greater improvement than those who do not Our experience has been the reverse and is summarized in the following paragraphs quoted from our papers in the *Lancet* of October 2 1937 (p 784) and October 9, 1937 (p 838)

There is however a significant difference in the results in cases that have had toxic jaundice as compared with cases having had no jaundice The differences are statistically significant the most important part of the discrepancy is shown to be in the no improvement or worse class In this connexion it is of interest that five cases developing jaundice after one to four gold injections showed no clinical improvement These cases are not included in the above table as they had not completed one full course Our figures show therefore, that the results of cases having toxic jaundice are worse than in those having no jaundice and our experience does not support the claims of Hench (1935) that jaundice is a valuable therapeutic measure in rheumatoid arthritis

These figures were concerned with seventy-four cases of jaundice arising in 671 cases of rheumatoid arthritis treated with gold salts In all cases the jaundice was of considerable severity and varied in duration from three to twelve weeks In view of the size of this series of cases it is rather unfortunate that no reference was made to it in either Dr Hench's paper or your annotation—We are etc,

STANLEY J HARTFALL
HUGH G GARLAND
Leeds August 27 WM GOLDIE

Treatment of Malaria

SIR—Your annotation in the *Journal* of July 30 (p 227) on the treatment of malaria comments that in primary infections a mean daily dose of 15 grains of quinine may bring about the disappearance of trophozoites of benign tertian or quartan malaria on an average on the third day although relapses occur in a percentage of individuals which may be as high as 50

There is no doubt that many relapses are due entirely to the fact that 5 or 10 grains of quinine are prescribed thrice daily after meals no regard being paid to the time of onset of the rigor and to its duration It has been shown however that during the rigor the trophozoites are to a large extent free in the blood and unprotected by the capsules of the erythrocytes For a period of three to ten hours the parasites are vulnerable to quinine therapy and are destroyed readily if the dosage is adequate After they have entered the red blood cells —that is during the period between rigors—they are very little affected by small doses of quinine—to wit 5 to 10 grains daily

A method of administering quinine that is very effective is to give 15 grains orally three hours before the onset of the chill followed by two further doses of 15 grains at intervals of two hours after the first In consequence the quinine content of the blood rises just before the trophozoites disrupt from the red blood cells and is maintained at a high level for eight to ten hours No quinine is given on the days between rigors since small daily doses retard the development of schizonts and may convert a primary infection to a chronic relapsing form Continuous quinine therapy may also encourage the parasites to inhabit the spleen, while very little splenic enlargement is found with the above shock method No mention was made in the annotation of the use of neosalvarsan in chronic forms of benign tertian and quartan malaria so it appears that no reference was made to it in the League of Nations Bulletins This is somewhat surprising—I am, etc,

Port Royal Jamaica August 15 KENNETH ROYES

Tuberculosis Dispensaries or Chest Clinics?

SIR—In the report in your issue of August 6 (p 312) on the Section of Tuberculosis at the Annual Meeting of the British Medical Association I noted with interest that Dr G S Todd deprecated the use of the term T B dispensary and suggested that to call such a dispensary a chest clinic would encourage more people to attend I have for some years urged that the present title is most unfortunate militating against the fullest use of these institutions and should be replaced by chest clinic

In a paper read to the Tuberculosis Association at Cambridge some years ago I dealt in detail with this subject and then stated that the prevention of tuberculosis depended upon four factors (1) The so-called tuberculosis dispensary controlled by the local authorities public health organization and fully equipped for clinical pathological and radiological investigation (2) The part played by the general practitioner (3) The education of the layman in the principles of hygiene (4) The education of the medical student and therefore

the general practitioner, in tuberculosis in particular and diseases of the chest in general

The tuberculosis dispensary can and should be of the greatest service, but I am convinced that in the interests of patients, practitioners, and the public health service alike there is great need for its reorganization and readjustment Experience shows that at most properly equipped dispensaries at least 50 per cent of new cases sent for diagnosis at each session, after routine clinical and radiological examination of the chest and bacteriological examination of the sputum, prove to be either free from disease or suffering from some other form of pulmonary or extrapulmonary mischief The large variety of non-tuberculous pulmonary and extrapulmonary diseases seen at these centres, and the fear which the word tuberculosis still excites in the minds of many laymen, lead one to ask, Is the title 'tuberculosis dispensary" as a centre for early diagnosis and prevention an ideal one to induce practitioners and patients alike to make the fullest use of it? Many general practitioners have told me that the average new patient dreads nothing more than the idea that he must attend a 'tuberculosis dispensary and the injunction to go to it may be strongly resented Some patients after tactful explanation will reconcile themselves to the idea, others, possibly less intelligent, fear the worst, they suspect that the doctor considers them 'social lepers' (as one patient put it to me) and from the moment of entering the dispensary, should they consent to go there, they are commonly a mass of nerves, enduring anxious nights until the diagnosis is made for good or for bad How can such an atmosphere favour preventive work or encourage complete co operation by the general practitioner—the pillar of any successful tuberculosis scheme? If the centre were renamed 'municipal chest clinic,' as in the county borough of East Ham, these difficulties would not arise The clinics, if linked up with medical schools could serve also as valuable teaching centres both for students and for practitioners—I am, etc,

London, W 1 August 22 PHILIP ELLMAN

Prevention of Blindness

SIR—At a recent meeting of representatives of local authorities in the North of England whose special interest is the administration of the Blind Persons Act, 1938, and Section 176 of the Public Health Act, 1936 I drew attention to two factors in the administration of these Acts which call for special consideration (1) local authorities in England and Wales are spending over £2,000,000 a year on the welfare of the blind, (2) they are relying almost entirely on the devotion of such leisure time as may be found possible by ophthalmic surgeons already engaged in teaching and in private ophthalmological practice, for the reduction of this expenditure The present policy, which apparently views with equanimity the payment of this heavy annual charge in perpetuity is a bad one Also a policy which accepts responsibility for this annual charge and relies for its liquidation upon such meagre voluntary efforts as are possible by ophthalmic surgeons, whose time is almost fully occupied in the prevention and cure of blindness by such orthodox methods as are known to us to day is a bad one

My recommendations to the local authorities representatives were (1) That the present public health administration should be utilized to its fullest extent especially in regard to statistics infectious diseases which lead to blindness congenital blindness etc (2) That an effective organization for clinical and laboratory research be initiated

With regard to (1) little need be said, as its possibilities are well known Recommendation (2), being comparatively new so far as local authority administration is concerned, needs elaboration Local authorities should be asked to contribute not more than 1 per cent of their annual expenditure on blind welfare to a central research fund for the prosecution of research (clinical and laboratory) into such conditions as lead to blindness Such a scheme has been started in a small way by voluntary effort in Edinburgh In my opinion, Sir, this effort, while admirable so far as it goes, is totally inadequate, having in view the importance of the problem and the annual cost of blind welfare to the taxpayer

It is suggested that similar research centres, adequately financed by local authorities collectively, should be established, say, one in the North of England, one in the Midlands, and two in London The establishment of such centres would imply the closest co-operation with existing ophthalmological teaching arrangements Each centre should have on its staff two whole time research ophthalmic surgeons, appointed for, say, five years at a salary which would attract highly qualified men, who would be specially selected for their suitability for research work The centres and funds available should be controlled by a central research board, on which, it is hoped, there would be representation of the British Council of Ophthalmologists, the Joint Committee on Blind Welfare of the Association of County Councils and Municipal Corporations, the National Institute for the Blind, and the Ministry of Health (Prevention of Blindness Committee)—I am, etc,

Leeds August 23 C G KAY SHARP M D

Undescended Testicle

SIR—It is surely bad logic to argue, as Mr Denis Browne does in his letter in the *Journal* of August 27 (p 473), that because gonadotropic extracts may induce descent of a testis, which subsequently remains in its new—and natural—position, some undesirable result of a mysterious gonadotropic influence, which has for many years lain dormant, may manifest itself in the remote future The action of the gonadotropic hormone is "transient" in so far as if the injections are not repeated two or three times weekly for some months the desired effect—namely, descent of the testis into the scrotum—will not be obtained The fact that this result is, we hope "permanent" provides no justification for supposing that the agent which induced it continues to exert an influence which may become obvious many years later The trailers of the red herring to which I referred in my letter in the *Journal* of August 13 (p 374) manage to suggest that some sinister disaster may in the remote future overtake the unfortunate patient who in his youth has received gonadotropic therapy This "gipsy's warning" intrigues me, and I wish that one of these sceptics would tell me just exactly what it is that may happen to the wretched patient

Mr Browne believes that doubts as to "the complete harmlessness of pregnyl" are "fairly widely held" (Incidentally, it would be better to refer to this substance as gonadotropic hormone, since "pregnyl" is merely a trade name for a preparation of this material distributed by a certain commercial firm) I would be grateful if he would introduce me to his authorities, as most of the endocrinologists I know would agree with me, I think in saying that such preparations used in therapeutic doses and over a reasonable period of time give rise to no adverse effects Here let me repeat what I pointed out in my previous letter—that in my experience descent of the testis occurs in 50 per cent of the successful cases within three months

of starting endocrine treatment In such circumstances I have encountered no adverse effects and I consider that Mr Browne has been unfortunate in observing genital hypertrophy often after such treatment

Apparently Mr Browne is afraid of using insulin and thyroid extract Surely he underrates his own clinical common sense for he admits that it is only the rash use of these substances which may be attended by harmful effects It does not need an endocrinologist nor Mr Browne to realize that the rash use of morphine or chloroform may lead to fatal results and yet both he and I have used them with perfect equanimity for hypnotic and anaesthetic purposes His conception of the growth hormone—or to read him correctly as he continually asks his critics to do growth hormones (I did not know that more than one had yet been demonstrated)—is rather like Lewis Carroll's conception of the effects of Alice's cake labelled Eat Me I only wish it were possible to increase skeletal growth appreciably even in dwarfs—that is persons suffering from growth hormone deficiency—let alone in a developing child who is presumably being supplied with a sufficiency of this hormone and from whose body any excess given in the form of injections would therefore be rejected unutilized

Mr Denis Browne regretted that someone who knows more about hormones than he does had not answered my letter to disagree with my conception of the effect of gonadotropic preparations It apparently has not occurred to him that someone who knows more about hormones than he does might possibly agree with me and not with him—I am etc

A Strict Vegetarian Diet

SIR—In answer to W H S (*Journal* August 27 p 480), the parents live on a vegetarian diet—for example turnips for the evening meal—but the father eats bread-and butter and drinks tea and wine He does some work in the City but lives very largely a sylvan life A daughter goes to a boarding school and eats there an ordinary diet but starts the holidays with a fast and then goes on to the strict vegetarian diet The school complains that she loses some pounds in weight each holiday The family are all thin but the father says all wild animals have no fat on them The boy lives a sylvan life walking to school in a neighbouring small town I think the open air makes the meagre diet possible and that he must get more calories in his diet than are reported to me but I have not been able to find out how

The Press referring to my article wrote about the perfect boy but all I wished to show was that he was holding his own on an astonishingly limited diet I tell his father that I think the boy's growth will be stunted The Press showed an extraordinary desire to secure the boy's address which I refused to divulge Reporters visited me in Norfolk my chauffeur's home my son who was staying in Suffolk my daughter in London and the secretary of the St John Clinic Finally one reporter by some means—such as asking the postman where a man lived in a bungalow in a wood in the district round my home—secured photographs of the mother and children Fortunately his paper followed this up by illustrations of jolly children living on an ordinary diet in a London creche —I am, etc,

St John Clinic London S W 1 August 28 LEONARD HILL

SIR—Sir Leonard Hill's figure (*Journal* August 20 p 417) of 28 grammes a day for the protein intake of a vegetarian boy aged 9 years is about half the average daily protein intake amongst vegetarians as a whole The figure which I obtained some years ago in a week's experiment on 118 vegetarians given a varied diet with a wide choice of foods was 81 grammes per man per diem This is equivalent to an intake of 57 grammes a day for a boy aged 9 using a scale of man values supplied by Professor Cathcart who kindly read through and criticized the summarized results On the other hand the deviation in protein intake among different vegetarians is such that some probably do not consume much more in proportion to their size than Sir Leonard Hill's subject

Turning to the source of protein in vegetarian diets in my experiment the average daily intake per man was distributed as follows dairy protein 33 grammes cereal protein 27 grammes nut protein 8 grammes vegetable and fruit protein 13 grammes The intake of dairy protein was considerably higher than that of Sir Leonard Hill's subject The vitamin C intake although not accurately determined was certainly several times the normal intake since the diet contained large amounts of fresh fruit (especially oranges and apples) and salads (especially lettuce and tomatoes)

In view of Sir Leonard Hill's remarks on the excellent physique attained by his subject on a low protein diet it may be of interest to refer to experiments carried out by Wishart in Professor Cathcart's laboratory on a vegetarian cyclist who was tested on diets of widely varying protein content (*J Physiol* 1934 82 189) Wishart's results showed that the athletic performance of his vegetarian subject did not seriously diminish until the protein intake fell below 40 grammes a day In a boy of 9 years this would be equivalent to 28 grammes a day Thus it would appear that the protein intake of Sir Leonard Hill's subject was the minimal for satisfactory physical development and a somewhat higher protein intake would probably be preferable for the average subject—I am etc

London W C 1 August 29 FRANK WOKES Ph C, B Sc

Stomach II Operation for Prostatic Enlargement

SIR—Mr Kenneth Walker's assumption (August 20 p 423) that although clinically my two patients were much improved the prostate remains enlarged seems to be correct Now fifteen and ten months after operation respectively both prostates feel larger than normal on examination per rectum In the first patient (with residual urine 1¾ oz) the gland feels very big in the other the enlargement seems slight I have no written record of how they felt before operation but my impression is that to the examining finger there is little appreciable change If I have another case this is a detail to which I shall pay special attention—I am etc

Prolonged Occipito-posterior Presentation

SIR—There has in recent years been a good deal of discussion in the *Journal* regarding the management of cases of occipito posterior presentations Most authorities advise rotating the head and shoulders forwards one practitioner stated that his practice was to put on the forceps push the head back a little and then rotate it with the forceps One of the Dublin books considers the delay is chiefly due to weak pains and advises a sleeping draught so that the patient gets a few hours rest and when she wakens up refreshed she is able by strong pains to expel the child

Galabin in his book strongly recommends the vectis to be applied over the occiput and to pull it down thus

flexing the head and making delivery easy The vectis is a sort of artificial hand I have on one occasion in my early days, in a very troublesome case, put the woman on her elbows and knees across the bed, and slipped my fingers up the rectum and pulled down the occiput, with delivery following soon thereafter It appears that women who adopt the squatting position in labour are not much troubled with occipito-posterior presentations Theoretically if the head can be well flexed there should be no more difficulty in delivering it whether it be occipito-posterior or occipito anterior, just as an egg when placed upright will slip easily into an egg cup but not if placed transversely The forceps are very apt to slip off the head when the occiput is to the back, as the blades point forward The os does not dilate readily in cases of occipito-posterior presentations and the 'waters' are apt to break too soon

The following case may help young practitioners

A multipara took ill at 2 p m and at 12 midnight sent for the nurse The nurse sent for me at 6 a m with a note saying the patient was exhausted the os rigid and only partially dilated The patient had been suffering severely for sixteen hours I found the os partially dilated the lips thickened and rigid The smooth back of the child could not be felt but an irregular outline and evidently the hands were felt through the wall of the abdomen The lozenge-shaped fontanelle was easily felt forwards I at once gave the patient a hypodermic injection of morphine gr ¼ In half an hour the os had thinned out and had dilated a good deal I then directed the nurse to administer chloroform in small doses to ease the pains and dilate the os This was successfully accomplished in the next half-hour I then applied the forceps burying them deeply to prevent them slipping off the head and pulled at first rather backwards I had no difficulty in bringing the head down to the perineum when I removed the forceps and with the fingers of my left hand pushed at short intervals the head forwards so as to favour its flexion round the pubis The shoulders were then turned round into the antero posterior diameter and cautiously extracted These measures saved the perineum so that no stitching was required

This case teaches the great advantage of using morphine and chloroform in such prolonged labours The woman was delivered within one and a half hours after my arrival

In all cases when chloroform is administered in labour there is a great tendency for the uterus not to contract properly but to be relaxed, allowing blood clots to accumulate in it and giving rise to more haemorrhage than is natural To prevent this a hypodermic injection of pituitrin should be given at once after the extraction of the placenta —I am, etc,

Dornoch August 25 JOHN T MACLACHLAN M D

*** An article on occipito-posterior presentation by Professor Chassar Moir appears at page 555 of this issue and a leading article at page 577

"Psychosomatic Illness"

SIR —In the *Journal* of August 27 (p 475) Dr P Lionel Goitein states that he examined over one hundred unemployed men (presumably not on the sick-list) and found that 'less than a quarter showed actual neurotic illness In a previous inquiry to which Dr Goitein evidently refers, I examined 1 000 insured persons who had been on the sick list mostly for a period of months and I noted that the incapacity in a third of these could best be attributed to psychoneurotic illness Because of the difference in these rates of incidence (his being one-quarter while mine was one third) Dr Goitein immediately concludes—or as he phrases it he has reason to believe"—that my allocation of patients was of doubtful psychological validity However, he omits to point out that the two samples examined (his patients being able bodied, while mine were unfit) are not comparable, and that it also would be "reasonable to believe' that the incidence of "neurosis proper" in persons who are able bodied would probably be appreciably lower than that in persons in receipt of certificates of incapacity for work This is not to say that I may not have made mistakes but I am not aware that I did err, at least in the rather obvious directions hinted at by Dr Goitein Further, the demonstration of the rising incidence of psychosomatic illness given in my paper of July 2 (p 11) is in no way invalidated even if, for the sake of argument, my previous contributions are omitted from consideration, its findings are supported by the evidence of many other independent workers, the soundness of whose methods has not so far been challenged by Dr Goitein

The concept formulated by the term "psychosomatic illness promises to be one of considerable practical importance to general and preventive medicine For this reason all pertinent criticism must be welcomed and met I have therefore tried to meet fairly what is objective and relevant in Dr Goitein's letter, and have confined my comments solely to this one aspect of his psychographic behaviour —I am, etc,

Glasgow August 29 JAMES L HALLIDAY

Medical Evidence at Inquests

SIR —Dr J L Barford's experience (*Journal* August 27 p 475) is not quite so exceptional as he imagines A short time ago I was called urgently to the home of an insured patient, upon whom for many weeks previously I had been in constant attendance, on account of severe mental depression following an operation for gastric ulcer I arrived to find him lying dead on the kitchen floor, he had hanged himself by means of a cord thrown over the door The cord had been cut by his son and the body released and laid on the ground only a few minutes before my arrival I attended the post-mortem examination and gave material information regarding the case to the medical man from a distance who had been asked to make the examination and who gave evidence at the inquest I, who had known and treated the patient in life and who saw him immediately after death, was not called An incidental result of the absence of medical evidence regarding his final illness was a paragraph in a local paper headed "Suicide's Imaginary Illness,' which distressed his relations —I am, etc

Purley Surrey, August 28 A LANKESTER

SIR —I am also very ignorant of the habits of coroners but I have reason to feel that the treatment Dr J L Barford has received is not unusual

In my instance I was summoned to a case of death from gunshot wounds The incident occurred on a very wet night in mid winter, and my examination of the body had to be conducted in a dark and dirty shed by the light of a small electric torch After making a thorough examination I was asked to make a statement to the police officer in charge of the case This I did and expressed my willingness to help further if this was needed The following day the police officer called again and I gathered that he was acting as coroner's officer He requested me to make a further statement as to the probability of the wounds being self-inflicted for the information of the coroner I gave him the information required A day later I was informed by the police that I should not be required to attend the inquest

Some time later I wrote to the coroner and also to the superintendent of police for the district with a request for a fee for the assistance and opinion I had given The coroner replied to the effect that he could not allow a fee as I had not been called to give evidence while the police replied to my request by a telephone conversation when they made it quite clear that they could accept no responsibility

I was later informed that no medical evidence was given at the proceedings before the coroner but only that of the police officer who was present at the time of my examination of the body

This incident appears to me to be a little more than unusual and raises the question as to whether a medical man who is not a police surgeon should give his services in such cases, and if he does is he expected to do so without recompense or even thanks? It also raises a further point as to the actual value of medical evidence at inquests since in this case the evidence of the police constable was considered to be sufficient—I am etc

Monk Sherborne August 27 J J DAVIS

Vitamin C in Milk

SIR—Apropos your important annotation on this topic in the *Journal* of August 27 (p 458) as an alternative to freeing milk from dissolved oxygen as suggested by the American workers, would it be easier to distribute the milk in coloured bottles? Could some authority suggest a suitable colour for the glass?—I am etc

Llandilo August 27 J H LLOYD

Sequelae of War Gas Poisoning

SIR—With reference to the correspondence in the *Journal* concerning sequelae of war gas poisoning Mr H Ramsbotham (quoted in the *Journal* of July 2 p 39) is correct in that the mortality statistics for ex service men quoted by me as regards Great Britain the United States and South Africa are his own figures and do not refer exclusively to cases of chemical injury My statement that the mortality rate for respiratory diseases in ex-service men in New Zealand is 30 per cent above normal is based on an official communication from the Pensions Department of New Zealand This states that the proportion of ex soldiers who have died from various diseases of the respiratory tract is very high although the proportion in receipt of a pension as at March 31 1931 was only 15 per cent yet the total deaths from chest diseases in the last ten years up to March 31 1931 represents a percentage of 42 4 over that period The mortality for respiratory disease for New Zealand as a whole during that period is given as 32 per cent

As regards Sir Henry Morris Jones's statement concerning the high incidence of chronic respiratory disease following exposure to war gases he may be interested to know that a statistical investigation of ex service men who appeared before the War Pensions Appeal Board of New Zealand at Auckland in 1937-8 has been undertaken Owing to the fact that gas was not used at Anzac or in Palestine it is possible to compare this group, as regards the incidence of chronic lung degeneration and disease with men who saw service in the gas areas in France Of 240 men in the gas exposed group 135 showed clinical and radiological evidence of cardiac rotation associated with pulmonary degenerative changes as compared with only ten men in a group of seventy who could not have been so exposed—56 per cent as compared with 14 per cent (Pulmonary tuberculosis and occupational factors were excluded)

While such an increase is very striking (400 per cent) it is fortunately no indication of the incidence of chronic lung diseases in ex service men as a whole since many of the men had appealed solely on the ground of chest disabilities There is good reason to believe that sequelae following chemical injury only occur in cases of lesser exposure when certain constitutional factors are present

A full account of the statistical investigation referred to could be obtained from the Medical Research Council of Great Britain—I am, etc

London Emergency Bed Service

SIR—In connexion with the London Emergency Bed Service there is one point I would like to make known When the service was first opened the telephone number was not put in the directory for fear of its being used for bogus calls In consequence a number of doctors who have read the appreciative letters in the issues of the *Journal* of August 20 and 27 have been unable to obtain the number which is Metropolitan 8781 The number will appear in future issues of the directory The Service has now been going for just over two months, and I hope that by the end of this week we shall have received our one thousandth call—I am etc

R E PEERS
Secretary Voluntary Hospitals
London E C 2 August 29 Emergency Bed Service

The Science Museum has recently acquired on loan from Professor E O Lawrence of California an example of the cyclotron an apparatus invented by Professor Lawrence and his associates which accelerates individual atoms to very high speeds without the use of very high voltages It is used for bombarding the nuclei of other atoms with high speed atomic projectiles from the study of the disintegrations and transmutations which take place under these conditions a great deal is being discovered about the structure of atomic nuclei (An annotation on the cyclotron appeared in the *Journal* of July 2 p 25) The late Lord Rutherford was the first to show in 1919 that the nuclei of atoms could be broken up by bombarding them with the alpha particles emitted from radium and its products In 1932 Cockcroft and Walton in Cambridge succeeded in breaking up atomic nuclei without the aid of radio active materials by bombarding them with hydrogen nuclei or protons accelerated to a high speed in a vacuum tube to which about 500 000 volts was applied their original apparatus may be seen in the Science Museum Lawrence's cyclotron is able to achieve similar results without the use of these very high voltages which lead to great practical inconveniences The instrument which he has lent to the Science Museum was constructed in 1931 and with an applied voltage no greater than 4 000 volts it was capable of accelerating protons to a speed which would require 1 200 000 volts directly applied With its aid Lawrence and his co workers were able to confirm and extend Cockcroft and Walton's results Professor Lawrence has also presented to the museum a series of photographs showing the development of the cyclotron The 1931 model has now been superseded by a larger instrument which can accelerate atomic particles to a speed which would require 16 million volts directly applied and with this instrument results of great importance are being obtained in California Cyclotrons are also being put into operation in Great Britain and their performance will be watched with the keenest interest

Obituary

SIR DAVID WILKIE M.D., M.Ch., F.R.C.S.Ed. and Eng.

Professor of Surgery, University of Edinburgh

The news of the sudden death on August 28 of Sir David Wilkie at the age of 56 must have come as a shock to the medical profession and especially to the many who heard him speak at the Annual Meeting of the British Medical Association at Plymouth in July of this year. The profession has sustained the loss of a great surgeon, one whose work was ever characterized not only by skill and courage but also by great kindness of heart. Thereby he endeared himself to all who came under his influence and probably no surgeon in recent years has had more members of the medical profession and their relatives under his professional care.

David Percival Dalbreck Wilkie was born in Kirriemuir, in Angus, the Thrums of J. M. Barrie, Wilkie's intimate personal friend. From his home in the north-east of Scotland he proceeded to the Edinburgh Academy, a school of which he often spoke and for which he had a fond affection. From the school he went to the University, where he graduated M.B., Ch.B. in 1904, he took his M.D. in 1907 and the Ch.M. in 1909, receiving a Gold Medal for his thesis. He became a Fellow of the Royal College of Surgeons of Edinburgh in 1907 and of the Royal College of Surgeons of England in 1918. He was made an Honorary Fellow of the American College of Surgeons in 1926. After qualifying he held the posts of house physician and of house surgeon in the Royal Infirmary, Edinburgh, and was also house surgeon at Chalmers Hospital and the Royal Hospital for Sick Children, Edinburgh. He was a member of many important scientific committees and boards—having served for example on the Medical Research Council and the Scientific Advisory Committee of the British Empire Cancer Campaign—and was an active and much-valued member of the British Medical Association. He was Vice-President of the Section of Surgery at the Annual Meeting at Cambridge in 1920 and of the Section of Proctology at the Newcastle Meeting in 1921, he was President of the Section of Surgery at the Edinburgh Meeting in 1927 and was a Vice-President of this Section at the Centenary Meeting in 1932. He received a knighthood in 1936. To the British Dominions, the U.S.A. and to various European countries he went as an invited orator and from them he received many honorary distinctions.

Early in his postgraduate career Wilkie began to reveal those characteristics which rapidly brought him to the forefront of his profession. He was a natural surgeon, endowed with qualities of thoughtful and careful judgment, brilliant manual dexterity, courageous decision, and fearless execution. These were the gifts with which he approached his life's work, and fortunately his early training went far to foster their successful fruition. He was house surgeon to Francis Mitchell Caird, later Regius Professor of Clinical Surgery in Edinburgh University. All who knew that great master of surgery and Lister's most devoted disciple will have some understanding of the lessons Wilkie learned from him. Herein probably, unconsciously, were planted the seeds of the love of research. When Wilkie worked as house surgeon to Sir Harold Stiles in the Children's Hospital and in Chalmers Hospital he came under the influence of a very great surgeon of the modern school, one trained in anatomy and imbued with the spirit of Kocher and William Mayo. His resident days in hospital over, and a period of study in Germany and Austria completed, Wilkie, keen to get out into the world and work among men, paid a hurried visit to Canada, scouring the land as a possible field in which he might practise his profession in the future. Fortunately for his native land he returned again to Edinburgh, rapidly advanced from post to post and instituted those researches in experimental surgery with which his name was associated throughout the surgical world. For his researches in abdominal surgery he was awarded the Liston Victoria Jubilee Prize in 1913.

Before the outbreak of war Wilkie and his two academical friends, Lorimer and Hugh Reid, joined the Royal Naval Volunteer Reserve. They were mobilized when war broke out. It was Wilkie's fate to be drafted to the Naval Barracks at Portsmouth and here one found him happy and contented with the minor post he occupied, with leisure on his hands he studied for his primary Ex-

Fellowship From Portsmouth he was appointed medical officer in charge of the hospital ship *Saint Margaret of Scotland* which proceeded to the Mediterranean and ultimately was located in Salonika On his return from there he was detailed for service in France as a surgeon with a casualty clearing station The war over and civil work again restored to its customary routine Wilkie returned to his work in Edinburgh as an assistant surgeon to the Royal Infirmary and to Leith Hospital and to research work in the Royal College of Physicians Laboratory Already he was a man marked out from his fellows and even before the war when the Provincial Surgeons a surgical club created by Moynihan and having within its ranks many of the foremost surgeons of the day looked for one to join their select number their choice lighted on a youngster from Edinburgh they selected Wilkie

After a short period of teaching surgery in conjunction with Sir John Fraser in the Extra Mural School he was appointed to the Chair of Surgery in Edinburgh University as Professor Alexis Thomson's successor The terms of this appointment were so modified as to put upon Wilkie a burden greater than almost any man could bear but he welcomed the post cheerfully as it gave him the opportunity of developing a school of surgical research which has since formed the model on which others have been framed He charmed his students with his eloquent tongue as a lecturer directed his surgical research department discharged his duties as a surgeon in ordinary to the Royal Infirmary and a teacher of clinical surgery and still found time to be a very busy surgeon in private practice Later the Medical Research Council and other important bodies sought his services and there were added weekly visits to London, when he had to travel overnight and return overnight to take up again the full daily routine, a strain upon his strength that many felt was unduly severe It was not surprising therefore that on more than one occasion a temporary breakdown in health took place to be quickly recovered from after a short rest in his country home at Gullane Wilkie was deeply interested in social questions and some years ago presented premises to Edinburgh University Settlement for use as an educational institute for working class people Known as Kirk o Field College, this institute was formally opened by Sir James Barrie

When it became known less than a month ago that he had again been ordered a complete rest by his physician Wilkie's friends were grieved but not unduly concerned Fuller investigation, however revealed a situation of great gravity At first it looked as if the heroic measures found necessary were to prove successful but this promise was not fulfilled and he passed over grateful for the happy life he had been granted and the many friends he had been given

A narrative however, of Wilkie's daily life and the steps that led up to the pinnacle he came to occupy would leave unsatisfied those who knew him as a man who realized that wonderful personal fascination that he possessed a great surgeon, a leader of research an eloquent orator and a true Christian gentleman has gone one comparatively young in years but with a rich record of good work done and leaving behind a name which will for long endure

Sir John Fraser Regius Professor of Clinical Surgery in the University of Edinburgh writes

Kirriemuir a country town in the northern portion of Angus is proud of the records of two distinguished men, J M Barrie and David Wilkie Some months syne Barrie passed from the sight of men and to day we mourn the death of David Wilkie, a surgeon of superb ability a man of wide sympathies and high achievements

I do not know to what extent Wilkie and Barrie were acquainted at an earlier stage of their lives but in later years and particularly after the latter's appointment as Chancellor of Edinburgh University a friendship developed between them which was mutual and sincere and which was to some extent centred round a common bond of interests and ideals Wilkie had many stories to tell of his visits to Barrie, and of the whimsical figure whom he found sitting in the inglenook by the fire and I imagine that part of their talk would be of Thrums and of the window through which the world and his wife were measured From Kirriemuir Wilkie went to school at the Edinburgh Academy It was a time of awakening interests and new friendships and it is a testimony to his sense of good fellowship that the links which were forged at that time have in great part persisted to the present day

I believe he was one to whom the choice of a profession presented little difficulty He was a man of high ideals and warm sympathies and where could he find a better field for the exercise of these qualities than in the profession of medicine? He pursued his way with the interest and enthusiasm of a devotee and he passed into the ranks of his profession well equipped for the future and with a keen appreciation of the opportunities and the privileges which lay before him Surgery made the strongest possible appeal to him and he entered the career to which he gave such devoted and distinguished service After a period of post-graduate study in Bonn Berne and Vienna he returned to Edinburgh where he became associated with Professor Caird as his private assistant and clinical tutor

It was at this time that he began the researches with which his name is so intimately associated He was particularly interested in acute abdominal conditions probably owing to his association with Caird and when one reviews the work which he did at this time one is filled with admiration of the wide field which he covered, for the originality which he displayed and for the accuracy with which his work was checked and controlled His name will always be associated with advances in our knowledge of acute appendicitis and it has an equal claim in connexion with such conditions as peritonitis, gastric and duodenal ulcer intestinal obstruction, and the surgery of the spleen and the biliary tract When therefore he was elected Professor of Systematic Surgery in 1924 it was a particularly fitting and appropriate appointment for it afforded him the opportunity to organize and develop both the systematic and the research aspects of the Chair That he was successful in the highest measure the years have shown and to-day the departments which his genius created are a fitting tribute to his ability and his judgment

Wilkie's genius as a teacher was outstanding He possessed the faculty of presenting his subject in language which could not fail to attract and in a manner which made one feel the living reality of the problem with which he was dealing The popularity of his classes was a testimony to the success of his methods It was in the operating theatre however that he was seen at his best There with a technique which was faultless with a dexterity that was equally complete he operated and demonstrated in a manner that called forth sincere admiration Those who witnessed his work will understand

something of the impression which I have attempted to convey

Amidst these various responsibilities it might seem that his opportunity for other interests would be limited, but such was his energy and his enthusiasm that his activities extended into various spheres It was characteristic of the man that whatever service he undertook was carried through to the utmost of his ability It was the same in his University interests he sat on Court and Senate and Faculty, each of these benefited from his wisdom, and in an amazing way he kept in closest touch with their multitudinous activities It was a work in which he took particular pleasure, and it was done with an enthusiasm that gave inspiration to his associates His administrative abilities had fuller scope when he became director of the surgical section of the municipal hospitals, a post which particularly appealed to him because it implied opportunity for new ventures and the development of a scheme of far-reaching possibilities

Among these many claims he yet found time to lend a helping hand when aid was needed He was Chairman of the Edinburgh University Settlement, and the Kirk o' Field College, the educational section of the scheme, owed its inception to his generosity and to his sympathy with those in distress His association with the student body was in some respects unique, for, while he was a teacher to whom they gave the fullest measure of admiration and regard, he was at the same time as one of them, sharing their troubles and their difficulties, and rejoicing with them in their triumphs He lived his life in the fullest and the best sense, and I believe he enjoyed every moment of it—the crowded hours of service, and the all too brief moments of leisure in his garden at Gullane or playing a round of golf at Muirfield On the casket which bore him to his resting-place lay the flowers of late summer—gladioli, red roses, and sweet peas, they were probably culled from his own garden, and to those of us who saw them lying there they were a symbol not of death but of victory, for in their beauty and the glory of their colours there was that which said, "Life's battle won, now cometh rest'

Sir W I de C Wheeler writes The news of the death of Sir David Wilkie has come as a shock to the surgical world I knew him intimately, and saw him often during the last twenty-five years Ill-health had dogged his footsteps for more than twelve months, but they never faltered What Wilkie has done for surgery and the Edinburgh school is universally recognized His work will endure Those in close touch with him will look back on days of inspiration in his presence, and an atmosphere of purity in the surroundings when he was at work His religion included ceaseless endeavour (alas! persisted in during illness) to obtain results in the advance of science, for the good of the school and for the benefit of all His efforts were crowned by recognition at home and abroad His memory will be perpetuated by those whom he taught and by the affection of his friends

[The photograph reproduced is by Elliott and Fry Ltd]

DR HENRY HOWARD WHITEHOUSE New York dermatologist and syphilologist died at his summer home in Connecticut on August 24 in his seventy-fifth year Associated with the New York Skin and Cancer Hospital for thirty eight years he was professor of dermatology at the New York Postgraduate Medical School from 1914 to 1925

ALEXANDER MACPHAIL, M D, F R F P S G

H M Inspector of Anatomy for England and Wales

Dr Alexander Macphail, the distinguished anatomist, died on August 28 at the age of 65 He was born in Glasgow, the youngest son of Dugald Macphail, in 1872, and entered Glasgow University in 1890 As a student he was editor of the *Glasgow University Magazine* He graduated M B C M, with high commendation, four years later, and was soon Senior Demonstrator of Anatomy, an appointment which he was to hold until his election as Dean of the Faculty of Medicine at St Mungo's College in 1900 In this same year Dr Macphail became a Fellow of the Royal Faculty of Physicians and Surgeons of Glasgow Only in 1907 did he leave Glasgow to take up a lectureship in anatomy at Charing Cross Hospital and King's College In 1910 he was secretary for England of the second International Congress of Anatomy, which was held at Brussels His appointment as lecturer in anatomy at St Bartholomew's Hospital took place in 1912, and terminated on his transfer to the Ministry of Health in 1821, during the great war he served as a captain in the R A M C

Dr Macphail was Emeritus Professor of Anatomy of St Mungo's College, and was at one time chairman of the Board of Studies in Human Anatomy and Morphology of the University of London He had been an examiner in anatomy for the Universities of Cambridge, London, Aberdeen, Glasgow, and St Andrews He acted as secretary for England and Scotland, and later as vice president, of the Anatomical Society of Great Britain and Ireland, and was a former president of the Glasgow University Medical Chirurgical Society He was secretary of the Section of Anatomy at the Annual Meeting of the British Medical Association in 1910, vice-president of the Section in 1912, and in 1922, as president of the Section at the meeting in Glasgow, he opened a discussion on the administration of the Anatomy Act (*Journal* 1922, **2**, 787) In the year following this meeting he proceeded to the M D of his old university He published several articles in the *Journal of Anatomy* and other special journals, but from 1921 onwards his interests were largely administrative In that year he was appointed H M Inspector of Anatomy for England and Wales and a medical officer of the Ministry of Health After the war the anatomy schools were faced with a difficult situation, the arrangements for obtaining subjects for dissection having partly broken down under the stress of changed conditions The Minister of Health therefore agreed to ask boards of guardians to co operate in the working of the Anatomy Acts It was Dr Macphail's task, on behalf of the Ministry to secure the assistance of the boards of guardians and, later of the public assistance committees No better appointment could have been made for this purpose Dr Macphail was held in the highest esteem by his professional colleagues, and his frank and attractive character soon won the regard of the officers of local authorities Arrangements were made to co ordinate the supply of subjects in accordance with the needs of the various medical schools

and their smooth working now over many years indicates that they were established on sound lines

Macphail's heart was in his work and he lost no opportunity of furthering anatomical studies Since 1934 he had held the appointment of Professor of Anatomy at the Royal Academy of Arts—an honour which he valued highly His health began to fail this year and he resigned his appointments in July His death so soon afterwards is a great loss to his colleagues and the many friends who appreciated his work and character

Professor F G Parsons writes

Alexander Macphail was lecturer in anatomy at St Bartholomew's at a time when I held a similar appointment at St Thomas's Unfortunately though we were always the best of friends I did not come nearly so closely in touch with him then as I did when we were associated in the secluded but necessary task of finding the material without which the medical schools could not teach anatomy and surgery It was then that I learnt to appreciate the infinite tact and forbearance with which he treated the people who formed the old boards of guardians He persuaded them to see how necessary it was in the interests of the poor that students should have the opportunity of taking to pieces the human body and so learning how it is constructed, before attempting to treat the living Often we talked of the importance of inducing well to do people to bequeath their bodies to science as an answer to the demagogues who accused us of cutting up the friendless poor while those who had money and friends could feel sure of a last sleep undisturbed Macphail felt that until an anatomist had himself been dissected we should have no real answer to these people, and we agreed that while there was no difficulty in securing the consent of medical men to leave their bodies to the schools for dissection—indeed it had been done many times—the real difficulty lay in gaining the consent of their relations who by giving it, would have to face the disapproval of others

I knew well enough that it was Macphail's wish that he should be dissected when he died but it was a surprise to me that the two relations who had nursed and cared for him so lovingly during his last illness should have agreed to carry out his wishes So far from caring little what became of his remains their action shows that they understood and took their part in this noble gesture Macphail's body is to go to Oxford a place chosen by himself I think because of his friendship for the late Professor Arthur Thomson

That his brother anatomists will think of some fitting means of showing their deep regret at losing him and their sympathy with his last act and with the loyalty of his relations I do not doubt

Mr A L Moreton writes

It was while Macphail was a student at Glasgow University that Lord Lister visited the scene of his former labours to address the students After the meeting the students unharnessed the horse of Lister's cab and drew it themselves to Sir Hector Cameron's house where he was staying Macphail used to relate that he took part in this affair and directed operations from the box seat of the cab Some years later he came to London to succeed his friend Lord (then Dr Christopher) Addison as lecturer on anatomy at Charing Cross Hospital when Addison went to St Bartholomew's When Charing Cross Hospital gave up teaching preliminary and intermediate subjects Macphail was offered the post of principal of the University of Hong Kong and had about three days in which to make his decision He decided not to go and was for a time lecturer on anatomy at King's College before succeeding Dr Addison again at St Bartholomew's As a teacher of anatomy to students both of medicine and of pictorial art Macphail was in the first rank a clear and simple expounder of his subject and an excellent blackboard artist rivalling his old friend Arthur Thomson of Oxford whom he succeeded as professor of anatomy at the Royal Academy Above all, Macphail had a real genius for friendship both with members of his own profession and with others His students and demonstrators all knew that in him they had a real friend to whom they could come with their difficulties and troubles well knowing that they would always receive sympathy and the best of advice Apart from his work, he was an ideal companion for a walk through the streets of the City through the countryside or among the hills and lochs from which came his forebears

THOMAS DAVIES HARRIES, F R C S M R C P

Honorary Surgeon Aberystwyth Infirmary and Cardiganshire General Hospital

We regret to announce the death on July 14 of Dr Thomas Davies Harries He qualified L S A in 1871 afterwards taking the F R C S in 1877 and the M R C P in 1892

A friend and colleague writes Dr Harries entered Guy's in 1867 and brought with him all the sporting characteristics of his native county of Pembroke He was an expert fisherman a good judge of horseflesh and an excellent rider to hounds Whilst at Guy's he became prominent as a boxer He had an exceedingly fine bedside manner and invariably won the confidence and affection of his patients His practice was a very extensive one and at one time included the largest consulting practice in Mid Wales Patients whom he treated at Aberystwyth frequently wanted him for consultation and that before the days of motor cars

Among his closest friends at Guy's was the late Sir Samuel Wilks who advised him to settle down at a seaside resort As a consequence Aberystwyth became the place of his choice and for sixty years and upwards until his death he resided there taking an active interest in all phases of public life and contributing his share to the management and government of the town by serving as town councillor alderman of the borough and mayor of the town on more than one occasion Not the least of his remarkable characteristics was his wonderful versatility His interests were not entirely confined to his practice, but included a close study of lead mining and engineering problems connected therewith

He married Miss Annette Benson of Royal Avenue London When they celebrated their diamond wedding on December 5 1937 they received a telegram of congratulation from the King and Queen

The following well known foreign medical men have recently died Dr SOREN HOLTH an eminent ophthalmologist of Oslo who was awarded in 1919 the Fridtjof Nansen prize for glaucoma, aged 74 Professor WILHELM BERGER lecturer on medical aspects of air travel, from an aeroplane accident, aged 43, Dr HERMANN STRAUB director of the medical clinic at Gottingen aged 55, Dr ERNEST CURCHOD of Lausanne president of the Swiss Society of Oto rhino laryngology Dr GEORGES MALOENS an eminent Brussels larvngologist Professor HANS CLAUS an eminent Berlin oto rhino-laryngologist aged 64 Dr LUIS CALVO MACKENNA of Chile one of the most notable paediatrists in South America and Professor GIUSEPPE FRANCHINI founder and director of the clinic for tropical diseases at Bologna

INFECTIOUS DISEASES AND VITAL STATISTICS

We print below a summary of Infectious Diseases and Vital Statistics in the British Isles during the week ended August 27, 1938

Figures of Principal Notifiable Diseases for the week and those for the corresponding week last year, for (a) England and Wales (London included) (b) London (administrative county) (c) Scotland (d) Eire (e) Northern Ireland Median values for the last 9 years for (a) and (b)

Figures of Births and Deaths, and of Deaths recorded under each infectious disease, are for (a) The 126 great towns (124 in 1937) in England and Wales (including London) (b) London (administrative county) (c) The 16 principal towns in Scotland (d) The 13 principal towns in Eire (e) The 10 principal towns (9 in 1937) in Northern Ireland

A dash — denotes no cases, a blank space denotes disease not notifiable or no return available

Disease	1938					1937 (Corresponding Week)					1929-37 (Median Value Corresponding Weeks)

* After October 1 1937 puerperal fever was made notifiable only in the administrative County of London

† Includes primary form in figure for England and Wales, London (administrative county) and Northern Ireland

EPIDEMIOLOGICAL NOTES*

Acute Poliomyelitis

The incidence of acute poliomyelitis in England and Wales continues to decline the numbers for the last three weeks for which figures are available being 81 77 and 71 (week under review) respectively while in London during the same period slight increases were noted the numbers being 3 7 and 9 respectively In Scotland the notifications fell from 14 to 10 and in Eire from 4 to 2 while in Northern Ireland 2 cases were notified (*nil* in the previous week) Notifications of two or more cases were received from Ashford 2 Blackburn 2 Braintree and Bocking (Urban) 5 Braintree (Rural) 2 Cuckfield (Urban) 2 Cuckfield (Rural) 3 Southend 2 Swansea 4 Worthing 2 The London cases were distributed thus Kensington 4 and 1 each in Lambeth Lewisham St Marylebone Shoreditch and Wandsworth In the week following 4 fresh cases were reported at Braintree bringing the total at the time of going to press in the outbreak to 91 The Essex outbreak continues to cause concern despite the action taken in postponing the reopening of the schools and in discouraging gatherings of persons of susceptible age at parties and cinemas It does not appear that immune serum convalescent or horse has been used on any scale in either prophylaxis or treatment

Reports have come to hand of a number of cases of poliomyelitis in Holland and in many centres reopening of chools has been postponed for one or two weeks The German authorities have forbidden the crossing of the frontier at some places to all children under the age of 14 years In Germany itself an outbreak at Frankfort on Main is reported in which 27 children have died from the disease this year The chief measures taken to check the epidemic have been prohibition of all meetings and assemblies of children and closure of schools until further notice

Typhoid Fever

Notifications of typhoid fever have risen in the last three weeks the numbers being 24 34 and 47 (week under review) respectively during the same period the figures for London were 1 4 and 8 respectively Notifications of two or more cases were received from Axminster 2 Birmingham 2 Colchester 2 Driffield 2 Farnworth 3 Okehampton 2 Thurrock 5 York 2 In London the cases were distributed thus Bermondsey 2 and 1 each in Battersea Camberwell Chelsea Islington Lambeth Southwark The Farnworth outbreak seems to be at an end no new cases having occurred in the last fortnight the total number has been 44 cases with 7 deaths The 2 cases notified at Axminster in the week under review were referred to in these columns last week

Reports have come to hand of an outbreak of typhoid fever among Europeans in Simla India in which more than 200 cases have occurred in the last month

Diphtheria and Scarlet Fever

Notifications of diphtheria in England and Wales during the week were practically stationary 963 (961) cases being recorded but in London there was an appreciable drop—112 compared with 144 Deaths in the 126 Great Towns of England and Wales fell from 25 to 21 but in London they rose from 3 to 6 of the 21 deaths in the 126 Great Towns 3 (3) occurred in Liverpool and 2 (0) in Cardiff There was a rise in the notifications of scarlet fever both in England and Wales and in London during the week the figures being 1,224 (1 067) and 90 (76) respectively the chief centres in England and Wales in which increases were recorded are Birkenhead 6 (3) Stockport 9 (6) Poole 5 (2) Darlington (Durham) 5 (2) West Ham 14 (8) Romford 10 (5) Bristol 17 (6) Liverpool 44 (28) Manchester 32 (27) Southport 6 (1) Edmonton 14 (3) Finchley 12 (2) Norwich 4 (1) Newcastle upon Tyne 7 (3) Ipswich 5 (1) Croydon 7 (2) Birmingham 28 (21)

Measles and Whooping-cough

During the week there were 4 deaths from measles in the 126 Great Towns—1 each in Blackburn Gateshead Sheffield and Birmingham—compared with 2 in the previous week The average daily admissions to the L C C fever hospitals were 3 (3) in the metropolitan boroughs in which measles is notifiable *notifications were lower in five remained the same in four* and rose in two—Battersea 3 (0) and Stepney 1 (0) In Scotland notifications fell from 42 to 38 during the week of the 38 cases 12 (4) occurred in Dunfermline 10 (2) in Zetland and 8 (2) in Glasgow There was 1 death (in Paisley) from measles in the 16 principal towns of Scotland during the week In the 126 Great Towns of England and Wales 9 (7) deaths from whooping cough were reported—2 (0) in Liverpool and 1 each in Bradford Leeds Manchester Middlesbrough Bath Plymouth Acton In Scotland 72 (62) cases of whooping-cough were notified 58 (47) of which were in Glasgow and 3 (5) deaths—2 (3) in Glasgow and 1 (0) in Paisley

Cholera

During the week ended August 27 586 cases of cholera and 165 deaths were reported in Shanghai and in Hong Kong 21 cases with 15 deaths Tientsin in North China has been added to the list of ports with cholera The Japanese Foreign Office is co operating with the Japanese Medical Association for China in the organization of travelling hospitals for the treatment of cases and in providing facilities for prophylactic inoculation of those at risk In British India 7,314 cases with *3 648 deaths were notified in the Central Provinces 612* cases with 218 deaths in Bombay (Presidency) 222 cases with 86 deaths in Madras (Presidency) 243 cases with 107 deaths in the North West Frontier Province 378 cases with 198 deaths in the United Provinces

* Except where otherwise mentioned figures in parentheses refer to the week preceding the one under review

Medical News

The Central Council for Health Education has decided to make a new appointment of a general secretary to act as chief officer of the Council at a salary of £750 rising to £900 per annum The terms of the appointment will be found in our advertisement columns It will be noticed that the appointment is open to both medical practitioners and laymen

In our advertisement columns this week the University of Birmingham invites applications for the Chair of Anatomy at a stipend of £1 000 per annum

The new Early Treatment Centre Berwick House attached to St Luke's Hospital Grove Hill Middlesbrough will be officially opened on Wednesday September 14 at 3 p m by Sir Hubert Bond D Sc M D F R C P Senior Commissioner Board of Control

At the annual congress of the National Veterinary Medical Association of Great Britain and Ireland held in Glasgow this week papers were read by Professor Edward Hindle on filterable viruses with special reference to immunity and by Drs Tom Hare and R M Fry on clinical observations on the beta haemolytic streptococcal infection of dogs

A neo Hippocratic congress will be held at Marseilles on September 29 under the presidency of Dr Cornil dean of the medical faculty when the following papers will be read The Hippocratic Doctrine and Induction in Medicine by Professor Laignel Lavastine Hippocrates and the School of Cnidos by Professor Guiart The Pre clinical Period of Diseases by Professors Marañon Guy Laroche Delore and Cornil and Dr Morlaas The Treatise on Fractures by Dr Poucel and The Professional Tradition in Hippocrates by MM Benoit and Foeta Further information can be obtained from Dr Martiny 10 Rue Alfred Roll Paris

The September issue of the *Practitioner* is devoted to disorders of sex contributors being Drs Havelock Ellis H Crichton Miller J A Hadfield Laura Hutton Desmond Curran and Mr Kenneth Walker

Mr J P Lockhart Mummery's Mayo Foundation lecture on the operative surgery of the colon delivered at Rochester Minnesota in October last is published in the *Proceedings of the Staff Meetings of the Mayo Clinic* for August 3

Letters, Notes, and Answers

All communications in regard to editorial business should be addressed to THE EDITOR, BRITISH MEDICAL JOURNAL B M A House Tavistock Square W C 1

ORIGINAL ARTICLES and LETTERS forwarded for publication are understood to be offered to the *British Medical Journal* alone, unless the contrary be stated Correspondents who wish notice to be taken of their communications should authenticate them with their names, not necessarily for publication

Authors desiring REPRINTS of their articles published in the *British Medical Journal* must communicate with the Secretary, B M A House Tavistock Square, W C 1 on receipt of proofs Authors overseas should indicate on MSS if reprints are required as proofs are not sent abroad

All communications with reference to ADVERTISEMENTS should be addressed to the Advertisement Manager Orders for copies of the *Journal* and communications with reference to subscriptions should be addressed to the Secretary, B M A House, Tavistock Square, W C 1

The TELEPHONE NUMBER of the British Medical Association and the *British Medical Journal* is EUSTON 2111

The TELEGRAPHIC ADDRESSES are

EDITOR OF THE *BRITISH MEDICAL JOURNAL* *Articulate Westcent London*

SECRETARY, *Medisecta Westcent London*

The address of the B M A Scottish Office is 7 Drumsheugh Gardens Edinburgh (telegrams *Associate Edinburgh* telephone 24361 Edinburgh) and of the Office of the Cumann Doctuiri na h Eireann (I M A and B M A) 18, Kildare Street, Dublin (telegrams *Bacillus Dublin* telephone 62550 Dublin)

QUERIES AND ANSWERS

Origin of the Laryngoscope

Dr R A D POPE (Chester) writes Your reference on August 6 under Nova et Vetera to Crampton Smyly and the laryngoscope prompts me to ask a question which has puzzled me lately Who invented the laryngoscope? Most medical and musical works, I believe credit it to Manuel Garcia about 1850 Yet Bryant (*Surgery* 1884) says The first laryngoscope was introduced in 1829 by B G Babington of Guy's Hospital under the term 'glottiscope Can anyone settle the point?

*** On March 18 1829 a rude 'glottiscope" was exhibited to the Hunterian Society of London by Benjamin Babington of Guy's Hospital and in 1837 the Edinburgh surgeon Robert Liston described his mode of exploring the larynx Babington's invention is recorded in the *London Medical Gazette* 1829 3 555 As Fielding Garrison notes in his *Introduction to the History of Medicine* these efforts passed without remark and the modern laryngoscope came to be invented by Manuel Garcia a Spanish singing teacher in London who sent an account of his instrument to the Royal Society in 1855 Three years later his method of examining the throat was made a permanent part of laryngology by J N Czermak of Prague and Ludwig Turck of Vienna

Chronic Uric Acid Dermatitis

'A B writes Will someone recommend the best treatment both externally and internally for a case of chronic uric acid dermatitis of the hands of some years duration Various treatments have been tried without success

Treatment of Superficial Glossitis

'O M N writes Could anyone advise me as to the treatment of a case of obstinate superficial glossitis? The patient is a woman aged 45 There is no anaemia a relapse of old standing bacilluria has been treated and digestive troubles dealt with her dentures have also been seen to and her general health seems good at present The condition healed completely while she was away on holiday but has returned after two days at home and is now as bad as ever

Income Tax

Service Gratuity

D D S P has completed five years as surgeon lieutenant R N and has received a gratuity of £1 000 on transfer to the Permanent List He has been informed officially that the sum is part of the officer's income for the year in which it is paid' and he inquires whether it should not be spread over the five years of service

*** Official pay is assessable under Schedule E and tax is chargeable 'in respect of all salaries, fees, wages perquisites or profits whatsoever for the year of assessment The language might perhaps be clearer on the point raised, but in recent years judicial dicta have shown an increasing tendency to approve of taxability as at the moment when the income becomes due If the amount in question becomes due as at the end of the five years—for example, so that no part of it could be claimed on prior resignation—it would we consider, be unwise to carry to appeal a contention that it accrued from year to year, and therefore should be spread But we agree that in the result some hardship may be inflicted when rates of tax are rising

Allowance for Wife's Earnings

"C H' understands that as his wife assists to a considerable degree in the management of his practice he can obtain some special allowance for any salary paid to her In the past he has "not paid her any sums specifically labelled as salary,' but has made substantial payments in bills and gifts of money, etc

*** Section 18 of the Finance A[illegible]t, 1920, provides that if a wife has any earned income the [illegible]usual married ' personal allowance, now £180, shall be [illegible]ncreased by four fifths of that earned income but not ex[illegible]eeding £45 If therefore a practitioner enters into a bind[illegible]ng arrangement with his wife to pay her, say £50 per an[illegible]num for assistance in his practice, he can deduct that a[illegible]mount as a professional expense but as four fifths of £5[illegible]0 = £40 is less than the maximum £45 special allowance [illegible]his wife will not be liable to payment of tax thereon The [illegible]revenue authorities usually require some evidence that the [illegible]£50 was paid as between employer and employee and not [illegible]8 as part of the domestic financial arrangements between h[illegible]usband and wife—that is that a sum was agreed as pa[illegible]—able for services to the practice, that some duties were in[illegible]—h fact performed and that the agreed payments were made[illegible]— and duly recorded in the books of the practice Retrospec[illegible]— tive effect to such arrange ments will not be given

LETTERS, NOT[illegible]ES, ETC.

Modern Art for th[illegible]e Hospital

Framed pictures are cheerful but[illegible]collect microbes Hence the yawning bareness of hospital[illegible]walls In New York City the W P A (Works Progress Adm[illegible]n tration) has lately com missioned some artists to paint m[illegible]urals—all examples of the modern school—for some of the C[illegible]ty hospitals The results are interesting both artistically an[illegible]d from the point of view of their possible psychological effe[illegible]ct upon the patients At the Queens General Hospital the r[illegible]e a striking mural in the panorama Medicine through the Ages[illegible]s one entitled Foibles of Medicine Historical accuracy is[illegible] the keynote of the Lister mural, in which the great surge[illegible]on is shown washing his hands in carbolic acid solution, w[illegible]ile a nurse devotedly sprays the operating theatre with t[illegible]he antiseptic In the Willard Parker Hospital's Men of Med[illegible]icine series the Louis Pasteur mural is somewhat domineerin[illegible]g but effective

Medical Postage Stan[illegible]ps

A new French 55+45 centimes charity [illegible]stamp cardinal red in colour and impressively simple in de[illegible]sign depicts a central monument with the inscription 'A la[illegible]gloire du service de sante," and in the top right-hand c[illegible]orner the serpent of Aesculapius entwining a staff

In honour of the 'Journees Medicales' [illegible]held at Beirut last May, Lebanon has issued a set of [illegible]our postage stamps depicting the medical school (2 piastre[illegible], light green 3½ orange 5 slate, and 10 light red)

Corrigendum

Dr JAMES A LISTER (Glasgow) writes I re[illegible]gret that an er[illegible]ror has crept into a letter of mine published in [illegible]the Supple[illegible]ment of August 27 (p 169) The phrase but [illegible]that of co[illegible]urse is the penalty of such a democratic Gover[illegible]nment own' should have read but that of course [illegible]is the penalty of such a democratic government as that [illegible]does to loaf o[illegible]n the Association

Surgical Treatment of Different Types of Fracture —N Anagnostakis
Contribution to Diagnosis of Renal Disease —A Herzog
Polarographic Investigation of Serum of Cancerous Patients —R K Felkel
Dental Treatment as Part of Convalescence Benefit —K Hausmann and L Petrik
Treatment of Affections of Liver and Biliary Passages by Curcumen —W Zengerling
Latest Publications on Diseases of Children —F Goebel

Polarographic Diagnosis of Cancer —Felkel claims that the serological diagnosis of cancer by means of the polarograph was possible in seventy six out of eighty histologically proved cases of cancer and in thirty nine out of forty eight

cases of recurrence of cancer The test was negative in thirty seven out of forty two normal cases or cases suffering from gynaecological affections Patients suffering from a febrile disease show a positive reaction during the febrile stage

*Treatment of Pneumococcal Meningitis —M Finland J W Brown and A E Rauh
Operative Mortality of Cholecystitis —P L Boyd
Failure of Nicotinic Acid in Treatment of Anaemia —O C Hansen Pruss

Pneumococcal Meningitis —The essentials of the method of treatment described in this article are (1) administration of large doses of sulphanilamide and maintenance of this dosage (2) intravenous injection of specific anti pneumococcal serum (3) intraspinal injection of the patient's own fresh serum after the establishment of a balance of antibody in the blood or of small doses of specific antiserum together with fresh human serum and (4) frequent drainage by lumbar puncture Ten cases were treated with sulphanilamide alone or in various combinations with specific serum and complement Six of the patients recovered the most rapid recoveries being in four cases treated as outlined above

Policlinico

Clinical Experiences in Treatment of Trachoma —E Cicchitto
Clinical Features of Chronic Catarrhal Conditions of Digestive Organs II —I Alessandrini
New Apparatus for Transfusion of Whole Blood —A Bauer

Trachoma —Cicchitto reviews the incidence of trachoma in North Africa and states that it is found in some 30 to 65 per cent of natives of Libya and in a corresponding proportion of certain other races He reports encouraging results especially in hypertrophic forms of trachoma of the palpebral conjunctiva following the instillation of 10 per cent quinine bisulphate solution

Presse Medicale

Paris vol 46 June 22 1938

*Arterial Hypertension due to Renal Ischaemia —Pasteur Vallery Radot S Blondin R Israel and Ch Cachin
*Pyretotherapy of Pure Lipoid Nephrosis —R Clément
*Mental Forms of Acute Syphilitic Meningitis Medico-legal Significance —A Donnadieu
Cold Abscess of Thyroid Gland —A Uraz

Arterial Hypertension and Renal Ischaemia —As a result of their experiments on eight dogs in which the renal arteries were compressed after removal of the nerve supply to the kidneys the authors maintain that arterial hypertension can result from interference with the blood supply to the kidneys

Pyretotherapy of Nephrosis —Clement describes a case of pure lipoid nephrosis in a lad of 15 which was successfully treated by pyretotherapy after all the more usual methods had failed He discusses the mode of action of pyrexia (natural or artificially induced) in nephrosis

Syphilitic Meningitis —The author describes a case in which a native of Morocco attempted to murder another for no apparent reason and was proved to have done so while in a confusional state following an acute syphilitic meningitis Donnadieu stresses the necessity for early examination of the cerebrospinal fluid in such cases

Paris vol 46 June 25 1938

Symposium on Hungarian Medicine

From Hungary

*On Old Age —Alexandre Koranyi
Morphology of Hyphomycosis Pedis —Tibor de Verebely
*Thyroid Gland and Pernicious Anaemia —G Mansfeld
*Therapeutic Properties of Vitamins —Albert Szent Gyorgyi
Recent Experimental Investigations on Obesity —Aladar de Beznak
Problem of Lichen Moniliformis —Louis Nekam

From France

Whooping-cough Lung and its Radiographic Picture —Robert Debré Maurice Lamy Marcel Mignon and J J Welti
Histological Lesions of Gonococcal Arthritis —H Mondor and Mlle Gauthier Villars

Calcified Hydatid Cysts —Pierre Goinard
Radiological Appearances of Orderly Trabecular Dissociation in Paget's Disease —H Tillier R Raynaud and G Marill
Radiographic Dissociation of Intrathoracic Shadows in Anterior Position —B Enquin and J A Aguirre

Old Age —Koranyi, in a detailed discussion on old age publishes a chart showing graphs of the normal relative curves for intellectual life sexual life, muscular strength and metabolism from birth till the age of 90 According to him the greatest development of the intellect is not reached until the age of 60

Thyroid and Anaemia —Mansfeld gives an account of his investigation of the relations between the thyroid and pernicious anaemia produced in rabbits by injections of saponin and collargol He found that the thyroid is not necessary for the formation of the anti pernicious anaemia principle in the liver since preparations made from the livers of thyroidectomized animals were as potent as those from normal animals On the other hand, the presence of the thyroid appears to be necessary for the utilization of the anti pernicious anaemia principle since it was found that this principle was quite ineffective in thyroidectomized animals Preparations of the stomach were fully active, which would seem to show that the anti-pernicious principles in the liver and the stomach cannot be the same since the former needs to be activated by the thyroid while the latter does not It activation was found to be due not to thyroxine but to another hormone which had not hitherto been isolated which Mansfeld calls the myelotropic hormone of the thyroid

Vitamins —Szent Gyorgyi thinks there is an ever wide field for the therapeutic use of the vitamins quite apart from diseases due to definite avitaminosis He is of the opinion that the true criterion of the amount of any vitamin

needed by the body is not the quantity which will cure or prevent a definite deficiency disease such as scurvy but the amount required to keep the animal in perfect health which is probably the amount required to saturate its tissues and to raise its resistance to such an extent that no addition of vitamin will have any further effect If vitamins are given in these really adequate doses the author foresees a brilliant future for them in the treatment of various diseases and in particular for vitamin C in the therapy of febrile diseases

Case of Benign Lymphogranulomatosis (Sarcoid Boeck Schaumann) of Lymph Glands Tonsils and Salivary Glands without Any Demonstrable Affection of *Skin Mucous Membranes or Osseous System (Eng)* —T K With and P Hellweg Larsen
Complication with Pulmonary Tuberculosis (Primary?) (Eng) —T K With and P Hellweg Larsen
Serviceability of Power of Distinction in Examinations for Vitamin Deficiency (Eng) —E Groth Petersen

Histaminase and Histamine — Torantil is a dried extract of the mucous membrane of the small intestine and it counteracts the contraction of the guinea pig uterus caused by histamine Torantil only inactivates histamine after the incubation of mixtures for twenty four hours the optimum *pH* being 7 to 8 The histaminase contained in torantil appears to have a favourable effect in cases of allergic skin eruptions

Investigations on Leucocytic Blood Picture Determined by Arneth Schilling Method in approximately 100 Patients with Bone or Joint Diseases chiefly Tuberculous (Eng)—E Greger
*Investigations on Skin Temperature of Patients with Diseases of Joints (Eng)—E Greger
Three Cases of Fracture of Sternum (Eng)—S Hallgrimsson

Subluxation of Hip—Sixty one patients were submitted to plastic operations on the acetabulum The indications are discussed and the late results—one to nine years after operation—are analysed Only in a small number of patients did the operation result in a complete cure, but thirty three hips showed a good result and fourteen hips were improved Painlessness and greater stability of the joint may be expected to follow these plastic procedures

Skin Temperature in Joint Diseases—The author has investigated the temperature of the skin overlying normal joints and joints affected by various diseases Symmetrical readings are taken Tuberculosis of joints produces a fairly pronounced elevation of the skin temperature which becomes apparent as a difference between the temperatures of symmetrical places Such differences were found to be less in arthritis of other than tuberculous origin It is suggested that the method may be of some value in the diagnosis and differential diagnosis of joint affections

Morphology of Stomach and Gastric Secretion in Malays and Chinese and Different Incidence of Gastric Ulcer and Cancer in these Races—C Bonne Ph H Hartz J V Klerks J H Posthuma W Radsma and S Tjokronegoro

Cancer of the Alimentary Canal in Animals—In 142 000 mice of Miss Slye's stock all dying of natural causes and mostly of cancer age there were only fifteen primary malignant tumours of the stomach and none in the oesophagus There were primary intestinal tumours in nineteen mice in eleven of which the tumour originated in a prolapsed rectum The authors discuss the comparative rarity of cancer of the alimentary canal in animals and provide a valuable list of ninety references

Gastric Ulcer and Cancer in Java—The incidence of gastric ulcer and gastric cancer is extremely low in the natives of Java but in the Chinese living there it is much the same as in Western countries The authors investigated the anatomy, histology and function of the stomach in the two races Gastric function was not more active in Chinese than in Javanese Chronic atrophic gastritis and goblet cell metaplasia were more frequent in the Chinese while gastritis in general and erosions were about equally frequent The rarity of ulcer in the Javanese was attributed to the absence of a factor which in Europeans and Chinese causes ulcer formation on the basis of erosion The aetiological significance of differences in diet and habits cannot yet be assessed

Medical and Surgical Treatment of Syphilis of Larynx—J Rebattu and P Mouret-Kuhn

Auricular Encephalitis—Acute cerebral oedema without pus formation is a rare complication of middle ear suppuration The authors look upon this condition as a pathological entity and do not agree with those observers who consider that oedema of the brain is simply an early stage of abscess formation The lesions appear to be caused by an acute thrombosis of cerebral vessels either of a small artery or more often thrombosis of the transverse sinus which has spread into some of the cerebral or cerebellar veins An acute oedema of a limited area of brain tissue is the result and this may go on to necrosis The term encephalitis is not correct because there is no infection of brain substance—only a vascular lesion A further factor to be considered is an embolus or a cerebral vessel with a vasomotor effect at a distance from the embolus

Archives of Dermatology and Syphilology

Chicago vol 37 May 1938

Cutaneous Manifestations of *Trichophyton purpureum* (Barg)—G M Lewis and M E Hopper
Treatment of a Pemphigoid Eruption with Sulphanilamide Case Report—E S Lain and J H Lamb

Early Epidermal Neoplasia—R L Sutton presents an illuminating paper on small epidermal neoplasms and suggests that these should be classified according to the rate of growth of the altered cells and their coherence Neoplasms with strong coherence and slow growth do not metastasize and include senile keratoses leucoplakic neoplasms with no coherence and a rapid rate of growth form carcinomata and metastasize easily The author suggests a division into six types of neoplasm based on the rate of growth of the altered cells and the tendency of the cells to cohere He considers the description precancerous illogical and supports the somatic mutation theory of the origin of cancer

Archives of Ophthalmology

Cancer of Eyelids—Of 464 cases 230 were examined histologically 60 per cent were basal cell and 14 per cent were mixed basal cell and squamous-cell carcinomata The basal cell type occurred in the sixth and the mixed cell in the fifth decade of life 29·5 per cent of the former and 31·2 per cent of the latter were associated with chronic irritation Treatment consisted in exenteration of the orbit excision diathermy and cauterization or operation and irradiation

The mortality in the basal cell lesions was 11 per cent, and 68 per cent in the mixed growths 46 1 per cent of the patients with basal cell epitheliomata and 75 per cent of those with mixed epitheliomata lived fifteen years or more after treatment Only 20 per cent of the patients sought adequate treatment in the first year of the disease

Stability of Vitamin A —When heated at 100 C in oxygen vitamin A takes up oxygen Its ultra-violet absorption iodine value and acetyl value fall and some aldehyde is formed Its biological activity is reduced The results suggest that the hydroxyl group of vitamin A is oxidized to aldehyde and the unsaturated linkages to peroxides which are immediately destroyed by disruption or by reaction with other unsaturated linkages to form polymerides The presence of oxidized vitamin A in some concentrates may be responsible for their low biological values

Experimental Pellagra in Pigs —The substance necessary to prevent the ill effects of feeding young pigs on a maize diet is contained in the fuller's earth absorbate from an autoclaved yeast extract in the baryta eluate of this and in the alcoholic extract of dried yeast nicotinic acid and wheaten straw were also effective but riboflavin (lactoflavin) had no effect Since nicotinamide occurred in considerable quantities in the eluate from the absorbate used it seems probable that nicotinic acid or its amide is the substance lacking in the diet used and present also in wheaten straw Rats thrived on the maize diet on which pigs sickened and died their requirement of nicotinic acid must therefore be small

Gonads and Urinary Creatinine —Injection of a lipoid extract of testes into normal adult rabbits and recent castrates increased the urinary creatinine but reduced that of long standing castrates to pre castration level Injection of saline suspensions of testes reduced the urinary creatinine in normal and ill castrated rabbits Anterior pituitary extracts increased the urinary creatinine only in normal and recently castrated rabbits The effects of injections of testosterone androsterone and adult male urine were also studied The results suggest the presence of two different active principles in the testes and that the response to testicular extracts depends on the state of the anterior pituitary following castration

British Journal of Dermatology and Syphilis

London vol 50 June 1938

*Cutaneous and Subcutaneous Calcinosis —F R B Atkinson and F P Weber
Case of Seborrhoeic Sycosis with Recovery after Tonsillectomy —N Burgess
Case of Ehlers Danlos Syndrome —J F Smith
Treatment of Warts —J Avit Scott

Calcinosis —Atkinson and Weber give a very full review of calcinosis circumscripta and calcinosis universalis In the former the lesions may be painless or painful, and are so small as to be only demonstrable radiologically, and usually symmetrically distributed on the fingers, thumbs, and extensor aspect of the elbows In the latter universal type the flexor side of the limbs is implicated, the fingers escape The presence of lesions in the tips of the fingers differentiates calcinosis circumscripta from gout The blood chemistry aetiology and results of treatment are conflicting but the writers support the view that there is first a sclerosis associated with a local vascular disturbance, followed by a degeneration of the connective tissues giving rise to a special physiochemical affinity for the salts of calcium

*New Developments in Pharmacological Treatment of Primary Glaucoma —M J Schoenberg
Binocular Fixation for Scotometry at One Metre —J Foster
Notes on Optical Instruments and Devices —J Foster

Treatment of Glaucoma —A full description of the latest physiological views on the actions taking place at the junction between the nerve terminal and the effector cell in the case of the parasympathetic and sympathetic systems of the eye is followed by a detailed account of the effect of the various drugs used to modify such actions In some cases of primary glaucoma there is failure of the parasympathetic in others a preponderance of sympathetic activity and in a third type a mixture of these two factors It may be possible in the future to differentiate these types clinically and to employ with greater discretion the appropriate medicament So far as is known at present, drugs that have a beneficial effect in primary glaucoma act either upon the esterase or upon the effector cell

Protein and Non-protein Nitrogen—Swaminathan has estimated the relative amounts of protein and non-protein nitrogenous constituents occurring in certain cereals pulses nuts oilseeds condiments vegetables and in milk by the Stutzer method The average amounts of non-protein nitrogen expressed as percentages of the total nitrogen occurring in the different groups of foodstuffs were as follows cereals 5 per cent pulses 9 per cent nuts and oilseeds 5 per cent condiments 6 per cent, vegetables 14 per cent and milk 9 per cent Swaminathan also draws attention to the fact that if the protein content of a food is determined by multiplying the nitrogen content by 6·25 the digestibility coefficient of proteins may be under-estimated owing to the presence of varying amounts of non-protein nitrogen

Conduct of a Paediatric Prophylaxis Clinic—M Huschka and O S Oden
Candy-coated Tongue Depressor—F Hall

Vitamin A—The great importance of an adequate amount of vitamin A in the diet of infants and children is emphasized Cows milk contains only a small amount of this vitamin and there is also a seasonal variation It is pointed out that the administration of an excess of this vitamin does not produce an increased protection from infections the growing organs of early life need a varied diet which contains a good supply of all vitamins for health

Paradoxical Incontinence in Spina Bifida—The possible presence of spina bifida should be borne in mind in cases of incontinence of urine as it disturbs sensation and leads to loss of vesical expulsive power This condition may often be remedied by training the child to increase the expulsive power of the bladder and thus to compensate for the loss of sensation Cases are described which illustrate the training and the results of treatment

Journal de Radiologie et d'Électrologie

Paris vol 22 July 1938

Effect of X Rays on Eye and Ear—A U Desjardins
New Device for Demonstration of Optic Canal—A P Lachapelle

Case of Large Low Abdominal Hernia with Gastro-intestinal Contents—I Wolthelet
Tenth Congress of French Association of Gynaecologists and Obstetricians (September-October 1937)—M Dehenne and Mme Faure-Beaulieu

Optic Canal—This is a description of a very simple and ingenious device which allows the x ray examination of both optic canals under identical conditions The examination is carried out with the patient sitting and the whole procedure should not take more than a minute

Localization of Foreign Bodies—Army radiologists should be particularly interested in the simple quick and accurate method of localization of foreign bodies here described

Journal d'Urologie Medicale et Chirurgicale

Paris vol 45 May 1938

Transurethral Resection—J Cibert
Chemotherapy of Gonorrhoea by 1162 F—P Barbellion and A Garicaldi
Treatment of Chronic Gonorrhoea by Gaseous Dilatation—H Mercier
Case of Gynandroidism—C Lepoutre
Retrograde Catheterization in Tight Tubular Structures of Posterior Urethra—N Hortolomei

Transurethral Resection—Transurethral resection is especially suited for those patients who because of their age or general condition seem otherwise doomed to a catheter life or a permanent cystostomy In ninety two cases of resection it was performed for prostatic adenoma (thirty nine cases) dissectasia of the bladder neck (thirty six) prostatic cancer (eleven) bad result after prostatectomy (four) and once each for hypertrophy of Merciers bar and for the sequelae of a prostatic abscess Seventy nine patients had one resection twelve had two and one three the maximum amount of tissue resected being 25 grammes Six of the ninety two patients died three of them being cases of cancer of the prostate Post operative complications included haemorrhage (this was abundant in twelve patients being immediate in three and secondary in nine from the seventh to the sixtieth day) epididymitis (six cases one of which suppurated) urethral stricture (two cases) and incontinence nearly always transient (eight cases) these last were usually in cases in which the loop was carried too near the verumontanum due either to inattention or to poor visibility

Chemotherapy of Gonorrhoea—1162 F is para amino phenylsulphamide The maximum dose is 3 grammes a day for not more than five to eight days Toxic effects, if they occur call for a reduction in the dose or an abandonment of the drug Such effects may be general (headache asthenia, indigestion nausea, jaundice) cutaneous (morbilliform, scarlatiniform purpuric, or urticarial rashes), or nervous (sub-comatose condition, polyneuritis hallucinations, optic neuritis) Further, the blood may show sulphaemoglobinaemia methaemoglobinaemia, agranulocytosis or anaemia while the kidneys may be affected as shown by the presence of casts in the urine elevation of Ambard's constant, and diminished elimination of phenolsulphonephthalein

Health We Must Nurture—E H Wilkins
The Child Kept Apart from Parent—Ethel Cox
Notes on Some Memorandums of Evidence submitted by Society of Medical Officers of Health to Inter-departmental Committee on Nursing Services

Assessment of Nutrition—The author severely criticizes the usual haphazard methods of classifying school children as well or 'ill' nourished The absence of any biological standard and the "general impression" method lead to discordant results, and there is no clear distinction between positive health and the mere absence of defect The author advocates a much higher standard of assessment than that at present generally practised

Child Apart from Parents—This paper deals with the problems presented by the child (1) under institutional care (2) boarded out (3) brought up by foster parents, and (4) daily-minded' while the mother goes to work The difficulties of finding suitable environment and care for the child separated from its parents temporarily or permanently, are discussed at some length No definite solution is given, but foster parentage is favoured

THE UNIVERSAL TONIC UNIVERSALLY EFFECTIVE UNIVERSALLY ENJOYED

THE success of Minadex is largely traceable to the fact that it achieves its reconstructive effects without raising the bogey of nasty medicine in the mind of the child or weakened adult Experience in large hospitals for children has shown that the pleasant lemon flavour of Syrup Minadex is thoroughly enjoyed But more important still is the sound *constructive* basis on which Minadex is built Devoid of temporary stimulants, Minadex builds *positive* health It *is* stimulating, of course—often dramatically so But the effect is gained by rebuilding the blood and neuro-muscular systems with vitamins and minerals, and not by temporary reactions which create an illusion of returned vigour

For these reasons Minadex is as effective for treating, say, post-operative debility in an elderly patient, as it is for rebuilding a child convalescing from measles In fact one of its most valuable uses is in the treatment of adults who complain of being run-down or off-colour

Each fluid ounce of Minadex contains

1 Ferri et Ammon Cit , 13' grs , Mang Glycerophosph , 1 25 gr , Cupr Sulph 1 25 gr *To produce normal haemopoiesis*

2 Calc. Glycerophosph., 2 grs Pot. Glycerophosph , 1,5 gr , Sod Glycerophosph , 1 10 gr , Vitamin D 3 000 international units *To correct derangements of calcium metabolism To restore neuro-muscular tone To normalise the body functions*

3 Vitamin A, 18,000 international units *To renew the natural powers of resistance to disease by fortifying the epithelial linings of the body*

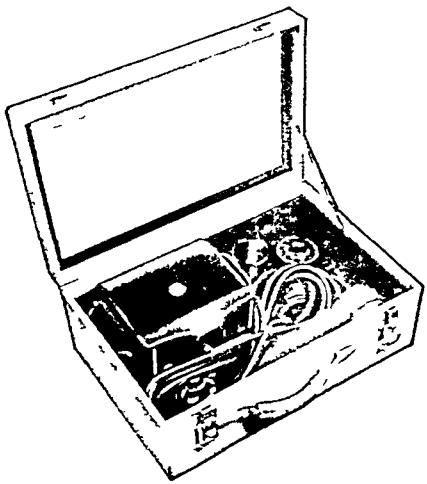
THE NEWEST IDEA IN HEARING AIDS

"The most beneficial and the essence of convenience"

"As a sufferer from deafness for many years, and one who has tried practically every instrument evolved," writes T G N, Littlehampton, "I find that the V P Maxade is definitely the most beneficial and really is the essence of convenience"

Unobtrusive and reliable, the new V P Maxade consists of three compact units *each as easy to conceal in the clothing or handbag as a cigarette case* It comprises a 3 valve amplifier, and sensitive crystal microphone, for either bone or air conduction hearing, miniature or disc type earpieces, and combines the important advantage of "invisibility" with the efficiency only possible in an electrical valve instrument Maxade is entered upon the Approved List of the National Institute for the Deaf and consistently used and prescribed by the principal hospitals and clinics A Model will gladly be sent for free clinical test Details of the V P Model, and other reasonably priced Maxade Models from Mr W Scott Worthington, F R S A PETO SCOTT Co, Ltd, 77, City Rd, E C 1 (*Acoustical Engineers since 1919*)



On view at the Empire Exhibition, Glasgow —Hall of Industry (North Section), Stand No T 106

Experienced Radiologists Will Marvel . . .

at the surprising amount of useful x-ray energy packed in so small a unit as the inexpensive new VICTOR Model F-3

While it is the newest thing in x-ray, the F-3 is new only in refinements that make for greater power, for greater convenience in use The experience gained in making hundreds of the original Model F showed us where even that world-famous design might be improved

So here is the F-3 with 3 2 times more radiographic power for even shorter exposures Kilovoltage is now variable for optional techniques And for those who wish to use the unit alternately as portable and mobile x-ray equipment, a revolutionary new tube stand has been provided Despite all this, the interestingly low price remains unchanged

For practical, efficient and convenient portable and mobile x-ray service, the new, more powerful F-3 is worthy of your fullest consideration Your written request will bring you full particulars, or a demonstration, without obligation

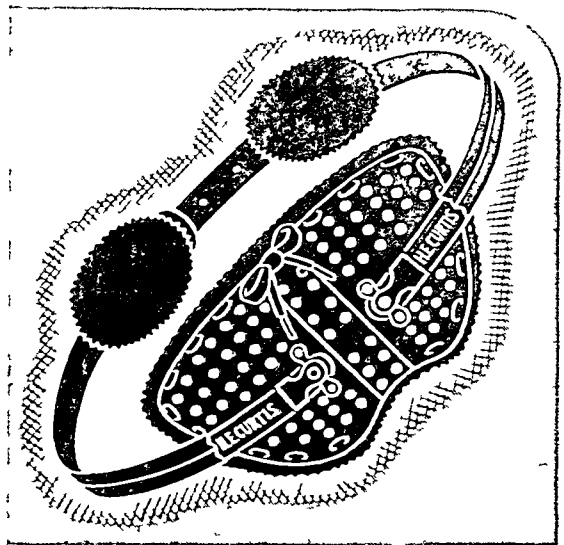
Question . . . . .

What gives the most effective abdominal support?

Answer DIRECT anterior posterior pressure

Question *Why so?*

Answer It gives even positive pressure where the body most needs it



Question *Where is this form of support found at its best?*

Answer In the Curtis Abdominal Support No 1

Question *What are its outstanding features?*

Answer No undue constriction of the lower abdomen Extremely light Maximum support is combined with complete freedom of the hips Medically approved in the treatment of all forms of abdominal ptosis—visceroptosis, enteroptosis and gastroptosis—and for the support of scar tissue during consolidation

Modern Iron Therapy

Iron Jelloids are an elegant and reliable means of administering the protocarbonate of iron The preparation has none of the disadvantages of Pil Blaud The iron content remains fresh and unoxidized indefinitely and injury to teeth is avoided

The Jelloids are highly effective in the treatment of achlorhydric anaemia and indeed in all the simple anaemias in which massive iron therapy is indicated

Iron Jelloids

You are cordially invited to apply for samples for clinical test

"THE OMNIPED ELASTIC FOOT CUSHION

is an efficient remedy and a commendable aid to those who suffer from any sort of foot troubles"

States a recent Report from the Berlin Orthopaedic University Clinic

The Omniped Foot Cushion is a resilient cushion which relieves and supports overstrained muscles without producing the pain which is so frequently inseparable from arch supports and foot correctives With every step Omniped Foot Cushion automatically massages the muscles giving them new strength and gradually easing back the whole structure of the foot to its normal position

Letters from Doctors and relieved patients alike are testifying to the success of this valuable new treatment for fallen arches metatarsal pains and the various consequent foot troubles

Full information and sample pair will be gladly sent on application

INCORPORATING THE ROSS INSTITUTE

POSTS OVERSEAS FOR MEDICAL MEN

A register is kept in the School of medical men who are prepared to be considered for posts overseas and the School is frequently asked to advise plantation and mining companies when such posts fall vacant

The salaries offered are attractive, conditions of service are governed by standardised forms of contract, and many of the posts offer to medical men a most interesting field in which to practise their profession

It is desirable that candidates for posts overseas should hold a diploma in tropical medicine and hygiene The course provided by the London School for the Conjoint Board's Diploma lasts six months and the tuition fee is £40 The course may be taken from October to March or from January to June There are generally more vacancies in the course commencing in January

The Director of the Ross Institute is always glad to interview medical men who would like information regarding the possibilities of a career overseas if they will be good enough to make an appointment to call on him Enquiries may be addressed to

25		1500	40	1830

Note—(1) The rupee is at present stabilized at a rate equivalent to 1s 6d

(2) An officer promoted to the rank of Lieut Colonel before completion of 20 years service will receive pay at the rate of Rs. 1200 per mensem (basic) plus £40 per month overseas pay

Extras—In addition to the above rates various allowances are admissible for a large number of special appointments on both the military and the civil side which may be held by members of the Indian Medical Service Special high rates of pay are also attached to the numerous administrative appointments open to officers in both branches of the Service

ANTEDATES IN COMMISSION

Candidates possessing certain higher medical qualifications or holding the Diploma in Public Health may be granted an antedate in their commissions Past service in certain hospital appointments may also render candidates eligible for an antedate Persons holding or about to hold resident posts at recognized hospitals may be seconded in those posts for a period The maximum period of antedate secondment or antedate and secondment combined admissible under this paragraph is limited to 18 months

OUTFIT ALLOWANCE

Officers on appointment will receive an allowance of £75 towards the cost of outfit.

PRIVATE PRACTICE.

With the exception of Administrative Officers military or civil, and officers holding certain special appointments officers are not debarred from taking private practice so long as it does not interfere with their proper duties.

LEAVE

Leave can be taken at reasonable intervals and adequate rates of leave pay are provided Extra leave (known as study leave) which may not exceed twelve months in all during an officer's service may be granted to officers desirous of pursuing special courses of study of a postgraduate nature During such leave study allowance at present fixed at the rate of 12s a day in the United Kingdom £1 a day on the Continent of Europe and £1 10s a day in the United States of America and Canada is granted to an officer in addition to ordinary rates of leave pay

PENSIONS

The rates of pensions are as follows —	Per annum
After 17 years service for pension	£372 0s.
18 "	£400 0s
19 "	£428 0s
20 "	£465 0s
21 " "	£502 0s
22 " "	£539 10s.
23 " "	£576 10s
" 24 "	£614 0s
25 " " "	£651 0s
26 " " "	£697 10s
" 27 "	£744 0s

There are additional pensions ranging from £65 to £350 per annum for officers who have held administrative appointments

PASSAGES

An officer on appointment is provided with free passage to India The families of officers who are married prior to the date of the officers embarkation on first appointment will also be provided with free passage to India subject to the payment of messing charges Officers and their families are also eligible for passage concessions under which they are granted a certain number of return passages home at Government expense during their service

INSTRUCTION PRIOR TO EMBARKATION

Officers are required to undergo courses of instruction at the Royal Army Medical College and at Aldershot lasting approximately three months prior to their embarkation for India on first appointment Information as to the rates of pay admissible during this period and subsequently up to arrival in India is contained in the memorandum referred to below

A memorandum giving full details regarding these appointments and forms of application may be obtained from the UNDER SECRETARY OF STATE FOR INDIA MILITARY DEPARTMENT INDIA OFFICE, LONDON S.W.1 The Selection Committee will meet at the India Office on 11th October 1938 next and the selected candidates unless seconded for hospital appointment, will be required to join a course of instruction commencing on 1st November prior to sailing for India in February 1939 Applications should reach the India Office as soon as possible

INDIA OFFICE, SEPTEMBER 1938.

PUBLIC HEALTH DEPARTMENT

KINGSTON COUNTY HOSPITAL
(185 beds; mainly acute)

APPOINTMENT OF RESIDENT SURGEON

Applications are invited for the appointment of Resident Surgeon at the Kingston County Hospital, Wheatfield Way, Kingston-upon-Thames.

Candidates must be duly registered medical practitioners and must possess a Higher Surgical Qualification.

The Officer appointed will be required to devote his whole time to the duties of the Council and any fees he may receive from time to time must be paid into the County Fund.

Commencing salary £600 per annum, rising by annual increments of £50 to a maximum of £700 per annum. The scale is full residential emolument and allowances for all purposes at the rate of £100 per annum will be paid in the event of the appointed person being required to act as Deputy Medical Superintendent.

Applications may be obtained from and must be returned direct to their own communication to the Superintendent of the Hospital in the case of persons at present employed in the service of the Council, and in other cases to the Clerk of the County Council, County Hall, Kingston-upon-Thames, not later than Thursday, September 15th, 1938.

County Hall, DUDLEY AUKLAND,
Kingston-upon-Thames. Clerk of the Council.
August 5th, 1938.

SURREY COUNTY COUNCIL

TUBERCULOSIS OFFICER

Applications are invited for the post of Tuberculosis Officer, which is a whole-time post under the Local Government and Other Officers' Superannuation Act, 1922, and the appointment will be subject to a satisfactory medical examination. Salary £700 per annum rising by annual increments of £50 to £1,000 per annum, together with travelling expenses in accordance with the Council's scale.

Candidates must be registered medical practitioners and have had not less than two years' appointment in a general hospital, of at least six months' duration, and have had practical experience in the diagnosis and treatment of tuberculosis in sanatoria or otherwise.

The Officer appointed will be required to devote his whole time to his official duties to work under the administrative control of the County Medical Officer of Health and to reside at such address as may be required. The duties will include the charge of tuberculosis dispensaries, the general arrangements for the treatment of tuberculous patients otherwise than in sanatoria, and such other duties as the Council may direct.

The appointment is terminable by three months' notice on either side.

Applications stating age, qualifications and experience to date, with copies of not more than three recent testimonials, must be sent to the County Medical Officer of Health, County Hall, Kingston-upon-Thames, from whom further particulars may be obtained. Special form of application are not applicable. Envelopes must be endorsed "Tuberculosis Officer."

Canvassing directly or indirectly will be a disqualification.

The last date for receipt of applications is first post on Monday, September 19th, 1938.

County Hall, Clerk of the County Council.
Wakefield.
September, 1938.

SURREY COUNTY COUNCIL

ASSISTANT MEDICAL OFFICER

Applications are invited for the appointment of an Assistant Medical Officer (male). Applicants must possess a qualification in Public Health. The main duties will be in connexion with the School Medical Service and Child Welfare Services, but the Officer appointed will be required to undertake such other Public Health duties as may be allocated to him. He will be on the staff of the County Medical Officer of Health, and will reside in the County, and duties will be undertaken in the Administrative County.

Salary £600 per annum, rising by annual increments of £25 to £700 per annum. Travelling expenses in accordance with the Council's scale will be allowed.

The appointment will be subject to the approval of the Ministry of Health, Board of Education, and to the satisfactory result of a medical examination as to the provisions of the Local Government and Other Officers' Superannuation Act, 1922, and the Statutory Regulations of the Council, which provide, *inter alia*, that appointment may be determined at any time by one month's notice on either side.

Applications, together with copies of testimonials and experience, should be sent to the undersigned not later than Monday, September 19th, 1938, and should be addressed to the County Medical Officer of Health, County Hall, Kingston-upon-Thames, from whom copies of the appointment may be obtained and to whom all queries relating to the appointment should be addressed.

Last date for receipt of applications, Wednesday, September 21st, 1938.

Canvassing directly or indirectly will be a disqualification.

DUDLEY AUKLAND,
County Hall, Clerk of the County Council.
Kingston-upon-Thames.
September 6th, 1938.

LANCASHIRE COUNTY COUNCIL

PARK HOSPITAL, DAVYHULME
(near Manchester)

APPOINTMENT OF JUNIOR RESIDENT MEDICAL OFFICER

Applications are invited from duly registered male Medical Practitioners for the appointment of Junior Resident Medical Officer at the above Hospital. Candidates must be unmarried.

Salary £200 per annum, rising by annual increments to £250, with full emoluments.

The appointment is for a period of six months, but applicants will be eligible for reappointment for further periods if recommended by the Medical Superintendent.

The Hospital comprises 600 beds for acute cases, is fully equipped in every respect, and is recognised as a complete training school for nurses.

The appointment will be terminable by one month's notice on either side.

Forms of application may be obtained from the County Medical Officer of Health, Hospital and Medical Department, County Offices, Preston, to whom all applications must be forwarded, together with copies of not more than two recent testimonials, which must be forwarded so as to be received not later than Friday, September 9th, 1938.

GEORGE ETHERTON,
Clerk of the County Council.
County Offices, Preston.
September 1st, 1938.

GLOUCESTERSHIRE

South Gloucestershire United Districts (Medical Officer of Health) Order, 1938

Applications are invited from male Medical Practitioners for a Medical Officer who will act as MEDICAL OFFICER OF HEALTH for the area comprising the Dursley Rural District and the Thornbury Rural District in the County of Gloucester and Assistant Medical Officer under the County Council of Gloucester for the purpose of such inspection only.

The person applying must be qualified in accordance with Article 4 of the Sanitary Officers (outside London) Regulations, 1935.

The salary for the combined appointments will be £700 per annum, rising by four annual increments to £900 per annum, with an allowance for travelling and office, and the expenses thereof of £150 per annum.

The officer appointed will be required to reside in the area between Thornbury and Dursley, to devote his whole time to the duties of the above mentioned appointment, and he will be restricted from engaging in private practice.

The successful candidate will be subject to a medical examination, and the appointments are subject to the provisions of the Local Government and Other Officers' Superannuation Act, 1922.

Chairman and Managing Director, Dr J. FIELD HALL.

The maximum commission payable on the sale of any Practice or Partnership in Great Britain placed exclusively in the hands of this Agency is £50 (fifty pounds) which sum covers goodwill drugs surgery fittings fixtures and furniture instruments and book debts, but not house property. Schedule of Terms will be forwarded on application.

Accountancy and legal services furnished by the Agency where desired at moderate inclusive charges. No charge is made to Principals for the introduction of Locum Tenens or Assistants.

1 MANCHESTER.—Very old-established middle and working-class PRACTICE averaging for last 3 years £1,380 p.a. Panel of 8,40. Appointments about £150 p.a. Fees from 3/6. House with 3 bedrooms, etc., garden, garage, electric light. Price freehold £800. Premium for quick sale 1½ years purchase part by instalments.

2. LONDON, EAST.—Old-established mixed-class PRACTICE averaging about £2,700 p.a. including part of about 1,300 and increasing. Separate surgery premises. Premium 2 years purchase.

3 LONDON, N.W.—GROWING RESIDENTIAL DISTRICT.—PARTNERSHIP.—Guaranteed share in rapidly expanding Practice producing to commence about £500 p.a., with increase later. Suitable detached house on rental at £52 p.a. Ingoing partner must be experienced and energetic.

4 KENT.—RAPIDLY EXPANDING DISTRICT.—Well-established middle and working-class PRACTICE producing about £1,700 p.a. including panel of nearly 1,400. Good house with 2 reception, 5 bedrooms, etc., large garden. Inclusive rent £130 p.a. Premium 2 years purchase.

5 MIDDLESEX.—DEVELOPING AREA.—Well established mixed-class PRACTICE averaging over £1,000 p.a. including panel of 800 and appointments worth about £100 p.a. Corner house with 2 reception, 4 bedrooms, garage, garden. Rent £100 p.a. Premium £2,000 or near offer for quick sale.

6 KENT COAST.—PARTNERSHIP.—ONE THIRD or ONE HALF SHARE in middle-class Practice averaging £3,650 p.a. Panel of about 2,000. Excellent modern house available by purchase or rental. Premium 2 years, or share. Ingoing partner must be experienced and well qualified.

7 NORKS.—Country PRACTICE.—Old-established income about £1,030 p.a. with scope for increase. About £350 of present income is derived from panel of some 700 patients. Good freehold house with ample accommodation, garden and garage. Price for practice and house £3,600 of which about £1,900 may be left on mortgage.

8 GLOS.—NEAR WYE VALLEY.—Very sound PRACTICE producing about £1,100 p.a. including panel of 1,150 patients and appointments worth about £20 p.a. Low expenses. Detached house with large garden, 5 bedrooms, etc. Freehold. Premium 1½ years purchase.

9 FAVOURITE SOUTH COAST RESORT.—Private and better class PRACTICE averaging over £1,000 p.a. Minimum fee 5/-. No dispensing. Scope for panel if desired. Modernized house with ample accommodation. Premium £1,000.

10 UNOPPOSED COUNTRY within easy distance North of London.—Income about £1,600 of which about £1,000 is from panel appointments and club. Convenient family residence with 6-7 bedrooms, etc. Freehold for sale or let on lease. Premium 2 years purchase.

11 ESSEX.—PARTNERSHIP after ASSISTANTSHIP of 3 months in chiefly better class practice offering considerable scope. Good house available on rental. Share worth £800/£900 p.a. at 2 years purchase.

12 WEST LONDON RESIDENTIAL DISTRICT.—Old-established chiefly upper and middle class PRACTICE averaging approximately £1,500 p.a. Selected panel of 1,14 patients but scope for increase if wished. Fees 5/- to 21/-. Non-dispensing. Scope for increase as large blocks of modern flats in course of erection. Excellent house with ample accommodation. Premium £3,000.

13 LINCS.—MARKET TOWN.—Old-established PRACTICE in prosperous district producing nearly £2,500 p.a. Panel of nearly 1,387. Substantial house (2 reception, 7 bedrooms etc., good garden). Rent £75 p.a. Premium 1½ years purchase or near offer for quick sale.

14 MIDLANDS.—GOOD RESIDENTIAL COUNTRY DISTRICT.—Compact PRACTICE at present producing about £750 p.a. but capable of considerable expansion. Choice of 2 houses. Moderate premium for either.

15 TOWN WITHIN 40 MILES [illegible] (with increase later) in old-established PRACTICE producing about £3,125 p.a. (last year approximately £3,500). Panel of about 1,200. Suitable house with 3 reception, 4 bedrooms, etc. Garden. Garage. Rent £80 p.a. Premium 2 years purchase. Ingoing partners should be over 30 used to better-class practice and able to do midwifery.

16 OUTLYING NORTHERN SUBURB.—Recently established PRACTICE on new estate producing about £300 p.a. including panel of 130. House with 2 reception, 3 bedrooms, etc. Garden. Price £670. Reasonable premium accepted.

17 SUSSEX.—PARTNERSHIP.—A half share in old-established good-class Practice producing over £3,200 p.a. Panel of about 1,500 and various appointments producing about £600 p.a. Good house with ample accommodation, large garden etc. Freehold for sale. Good schools and social facilities. Premium 2 years purchase. Ingoing partner should be experienced and have

18 [illegible].—Well-established PRACTICE producing [illegible] including panel of over 1,000. Excellent free [illegible] etc. Easily worked. On rental or can be bought. Premium 1½ years purchase or near offer.

19 NORTH WEST LONDON.—PARTNERSHIP.—One fifth share (with increase later) in well-established Practice producing about £5,200 p.a. including panel of about 600. Suitable maisonette with 2 reception, 2 bedrooms, etc. Inclusive rental £90 p.a. Premium 2 years purchase.

20 DURHAM COUNTY.—Old-established industrial PRACTICE producing £2,000 p.a., of which only about £450 is derived from private work. Panel of over 2,100 units. Practice has been held by the vendor for about 20 years. Premium £4,000 to include book debts, drugs, surgery furniture etc. (part by arrangement) or £3,600 cash down.

21 COAST TOWN WITHIN 80 MILES OF LONDON.—Well-established PRACTICE producing about £1,600 p.a. of which about £1,100 p.a. is derived from panel of approximately 1,300 patients. P.N.S. etc. Good freehold house available. Thoroughly modernized and redecorated, central heating. Ample accommodation, garden, garage. Price £1,800. Premium 2 years purchase. Scope for anyone who can do surgery.

22 CITY LOCUM.—Old-established PRACTICE producing about £1,250 p.a. gross, or approximately £700 p.a. net. Fees 10/6 and 21/-. Good deal of electrotherapy done. Premium £1,400 with furniture, equipment, etc., at valuation. Hours: Mondays to Fridays only, 10 to 5.

23 WEST END.—Opportunity for physician desirous of entering West End PRACTICE. M.R.C.P. minimum qualification essential. Full details on personal application.

24 EAST LONDON.—Well-established PRACTICE producing about £1,550 p.a. of which about £7,0 p.a. is derived from panel of about 1,350 patients P.M.S. and Public Assistance work. Large proportion of cash. Premium 2 years purchase.

25 SURREY.—WITHIN 15 MILES OF LONDON.—PARTNERSHIP.—ONE HALF SHARE in a very good mixed-class Practice situated in growing residential district. Gross cash receipts approximately £3,000 p.a. with substantial panel. Very nice house with all modern conveniences and beautiful garden (2 reception, 4 bedrooms etc.) Can be rented or purchased. Premium 2 years purchase. Ingoing partner must be experienced in surgery.

26 LONDON, S.W.—Old-established mixed-class PRACTICE producing for last 12 months £7,0 including panel of 1,80. Flat can be rented at £78 p.a. Premium £1,250.

27 LONDON, EAST.—Middle and working-class PRACTICE producing over £500 p.a. with good scope. Panel of about 750. Fees from 2/-. Ten roomed corner house. Price for lease £550. Premium £400 to include drugs, surgery fittings etc., and some furniture.

28 DEVON COAST.—POPULAR HOLIDAY RESORT.—Old-established non-dispensing PRACTICE averaging for the past 3 years £1,640 p.a. including panel of 1,400. Suitable house with ample accommodation. Freehold £1,700 or would rent. Premium £2,000.

29 [illegible] middle-class non-panel PRACTICE. Scope. Detached house overlooking [illegible]. Sport of all kinds. Good schools. Premium 2 years purchase. Ill health reason for sale.

30 WEST MIDLANDS.—PARTNERSHIP with succession in 2 or 3 years. Mixed-class Practice in attractive country town in very pleasant surroundings. Average receipts for last 3 years £1,828 p.a. Panel of about 850. On succession ideal house available 3 reception, large lounge hall, billiard room, 5 bedrooms, etc., excellent. Practice accommodation, nice garden, garage. Premium for half share £1,650.

31 BEDS.—PARTNERSHIP.—ONE THIRD SHARE in well-established mixed-class Practice producing £1,675 p.a. Panel of 760. Suitable house easily obtainable. Premium £1,000. Definite scope.

32 WELSH COAST.—Well-established good mixed PRACTICE producing over £2,000 p.a. including panel of 1,400. Suitable house with ample accommodation, good garden and garage. Rent £50 p.a. Premium £3,000 for quick sale.

33 SURREY.—RAPIDLY EXPANDING DISTRICT.—PRACTICE at present produces about £700 p.a. but could be much increased. Panel of 350 (discouraged). No midwifery. Excellent house with all modern conveniences. Premium for Practice and house £3,000.

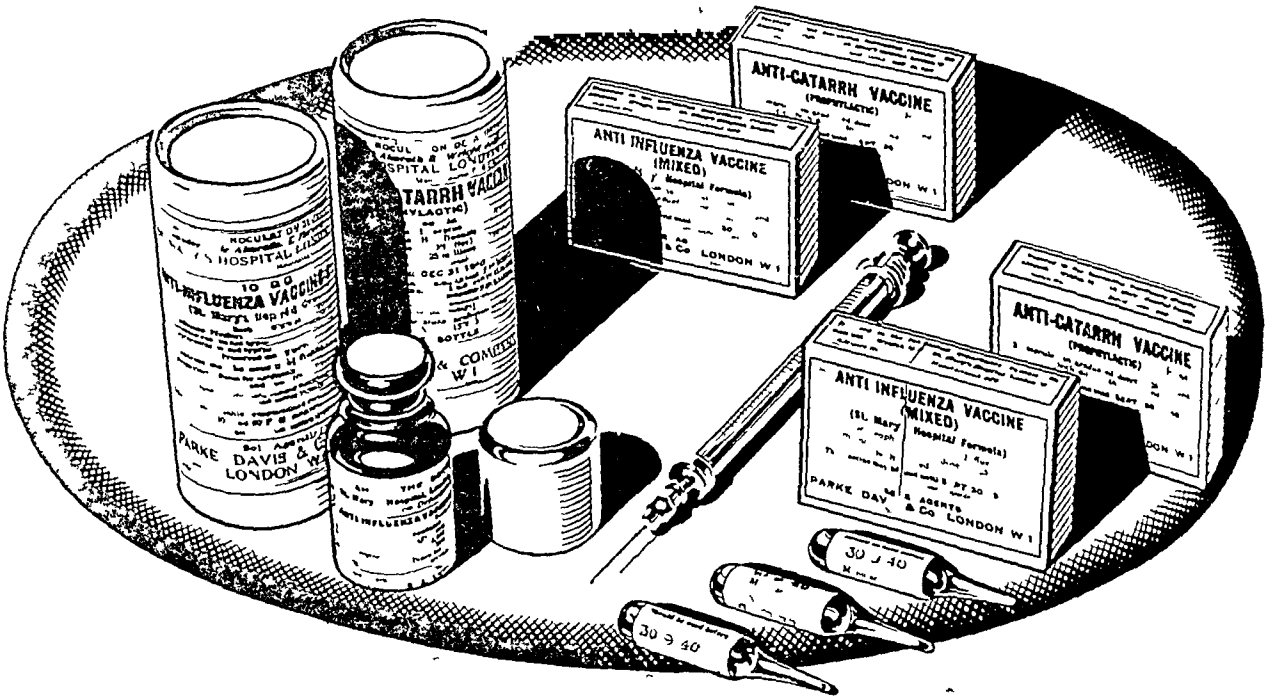
34 S.W. ENGLAND.—FAVOURITE COAST TOWN.—HALF SHARE after preliminary assistantship in chiefly better-class Practice producing nearly £2,000 p.a. Small panel. Choice of residence. Must be experienced and preferably knowledge of E.N.T. Premium 2½ years purchase part by arrangement.

35 LONDON, S.E.—Well-established PRACTICE, chiefly cash. Receipts average about £1,030 p.a. with panel and club producing over £400 p.a. Can be run as a lock up. Suitable premises available. Premium 2 year purchase.

36 LONDON, S.W.—WITHIN EASY REACH OF CITY AND WEST END.—Well-established chiefly middle and better-class PRACTICE with surgical scope producing about £1,450 p.a. Selected panel of 45. Fees 5/- and 7/6. Good-sized first floor flat with all conveniences. Purchaser should be able to do surgery and F.R.C.S. would be advantageous.

37 SOUTH WALES.—Old-established mainly contract PRACTICE producing last year £2,200 of which £2,050 is from contract work and panel. Suitable house available. Future prospects are considered to be excellent as new works have recently been erected in the district. Premium £3,500.

38 KENT COAST.—FAVOURITE SEASIDE RESORT.—Old-established middle-class PRACTICE producing about £670 p.a. Small panel 1,200 patients. Very good house in best end of the town with ample accommodation. Freehold available. Premium £1,200. Eminently suitable for retired army officer wishing to augment pension or there is scope for young man.



39 SUSSEX.—FAVOURITE COAST TOWN.—Old-established PRACTICE producing about £800 p.a. including panel which brings in about £150 p.a. Good house on two floors, 2 reception, 4 bedrooms, etc. Freehold for sale. Premium 2 years purchase.

40 NORTHANTS.—ASSISTANTSHIP with view to Partnership in an old established country Practice with good future prospects. Initial salary £500 p.a. including car allowance the assistant to live out. Full details on application.

41. MIDLANDS.—FAVOURITE COUNTY TOWN.—SURGICAL OPENING.—A QUARTER SHARE (after preliminary assistantship of 3 months) is offered in old-established increasing Practice producing approximately £3,900 p.a. Panel of about 2,800. One appointment worth about £125 p.a. Fees 5/- to 30/-. No dispensing. Suitable house with garden and garage. Rent £65 p.a. Premium 2 years purchase, part by arrangement. *Ingoing partner should be under 35, experienced, and able to do some surgery.*

ASSISTANTS REQUIRED.—Several good vacancies. Full details on application.

The Agency has made arrangements for special facilities on very favourable terms, to be afforded to approved purchasers for the advance of part of the premium for any suitable practice or partnership. Full details on application.

VACCINES for prophylaxis against Respiratory Affections...

PROPHYLACTIC inoculation against the common "cold," influenza, and catarrhal conditions of the respiratory tract generally, by means of vaccines prepared from the various organisms found in those infections, has given a high degree of immunity in a large number of cases

The micro organisms most commonly found in patients suffering from "colds" are Pneumococcus, Pfeiffer's Bacillus, Micrococcus catarrhalis, and Bacillus septus, and these are included in the ANTI CATARRH VACCINE prepared especially for the prophylaxis of the common cold in adults

The prophylactic effect of this vaccine is most advantageously obtained if inoculations are carried out during the latter part of September or early in October

It is generally agreed that the serious and sometimes fatal complications of influenza—such as bronchitis and pneumonia—as well as many of the less severe symptoms, are caused by infection with Pfeiffer's Bacillus, Pneumococcus and Streptococcus On this account the ANTI INFLUENZA VACCINE (MIXED), St Mary's Hospital Formula, which contains these three organisms, is of great value as a prophylactic of influenza and its sequelae

Further particulars of the above vaccines, which are prepared in the Department for Therapeutic Inoculation (Founder Sir Almroth E Wright, M D), St Mary's Hospital, London, W , will be supplied on request

In the treatment of MACROCYTIC ANAEMIAS

This palatable liquid extract of hog's stomach contains Hæmopoietin in stable solution The stomachs are treated immediately after killing to extract the *Antianæmic Factor in active condition* producing a bland liquid of pleasant flavour, to which the name HOGASTRIN has been given

A dose of two teaspoonfuls in a little water three times a day for a fortnight, then reduced to one teaspoonful, will invariably give good results in the treatment of all *Macrocytic Anæmias*

Packed in 4 oz 8 oz and 16 oz bottles

For inspection sample and literature apply to the manufacturers

GILES SCHACHT AND CO
CLIFTON, BRISTOL, 8
Manufacturing chemists for over a century

HOGASTRIN

YES

YOU CAN SAFELY PRESCRIBE THIS TEA FOR ALL YOUR PATIENTS

Not because it is specially prepared in any way whatever, but simply because it is harmless to the most delicate digestion The Doctor's China Tea is a blend of the choicest teas that China grows—teas which contain comparatively so little tannin that they can be enjoyed by all For over a quarter of a century The Doctor's China Tea has been recommended by the medical profession—even in cases of dyspepsia and gastritis A generous free sample will be sent to any doctor who would like an opportunity of trying the tea

THE DOCTOR'S CHINA TEA

NEW EDITIONS OF TWO FAMOUS BOOKS

JUST READY!—Norris & Landis on Chest Diseases and Physical Diagnosis

Remade New (6th) Edition—In this successful book on *Diseases of the Chest and the Principles of Physical Diagnosis* you will find detailed discussions of inspection palpation percussion and auscultation—their *technique and application* in the diagnosis of diseases of the chest More than that complete chapters are included on the use of the electrocardiograph and of the X ray

Then the authors devote *two extensive sections* to Diseases of the Bronchi Lungs Pleura Diaphragm and Diseases of the Heart Causes morbid anatomy the symptomatology physical signs and the methods of eliciting them as well as other important data that contribute to more specific and accurate diagnoses are given full consideration

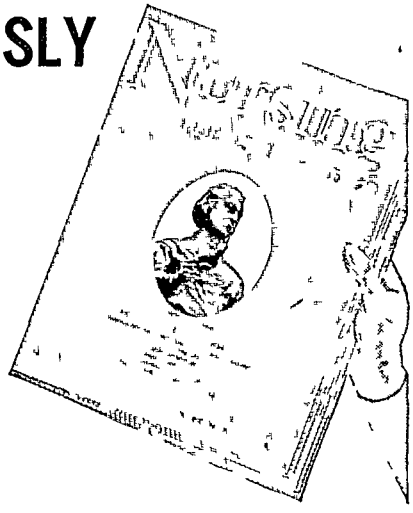
The *New (6th) Edition* represents the most severe revision ever given this book The discussions of bronchial asthma bronchiectasis lung abscess and cystic disease relations of nasal and accessory sinus disease to infections of the lower air tract the chapter on coronary disease and that on the electrocardiograph have been *completely rewritten* The chapter on X ray diagnosis of the heart and great vessels is *entirely new* and there has been extensive revision of hypertensive heart disease functional tests of the circulation with venous pressure and many other subjects There are 477 illustrations

By Charles W Norris MD formerly Professor of Clinical Medicine in the University of Pennsylvania Revised with the assistance of Seth S Ireland MD Assistant Professor of Medicine and Head of the Department of Physical Diagnosis in the University of Pennsylvania With chapters on the *Fundamentals of Physical Examination of the Chest* by Charles M Mast MD formerly Instructor in the Department of Medicine in the University of Pennsylvania and chapter on the *Electrocardiograph* by Thomas M McMillan MD Chief Cardiologist to the Philadelphia General Hospital Octavo of 1070 pages with 477 illustrations Cloth 42s net

JUST READY!—DeLee's Principles and Practice of Obstetrics

Just Off Press—In revising his book for the *New (7th) Edition* Dr DeLee scrutinized every page to make sure that no new and important fact was omitted He has added *new material and new illustrations* throughout the work In fact, so thoroughly did he revise the work to bring it right up to date that *the entire book had to be reset*

The new procedures and new treatments are of course included such as the use of scalp traction (Willett's) forceps in placenta praevia and the sulphanilamide treatment of puerperal sepsis New material on contracted pelvis has been added including today's methods of treatment The discussion of the mechanism of labour has been given special attention as have those on the physiology of menstruation ovulation of the ovum blood chemistry of the toxaemias of pregnancy the barbiturates and anaesthesia and many other subjects of specific importance



On physiology and pathology on signs symptoms biologic tests on the hygiene of pregnancy on prenatal care conduct of labour on the management of diseases incident to pregnancy and particularly on *operative and non operative measures* Dr DeLee writes fully and in detail Nothing is left to chance nothing to inference—*he tells you what to do when and how to do it*—gives you such guidance that is as authoritative as it is specific because it is based on an experience of many years as teacher and practising specialist The *New (7th) Edition contains* 1,277 *magnificent pictures on* 985 *figures including* 271 *in colours*

By Joseph DeLee AM MD Professor of Obstetrics and Gynecology Emeritus at the University of Chicago Octavo of 1277 pages with 1277 beautiful illustrations on 985 figures including 271 in colour 50s net

FOR NURSES WHO TAKE THEIR CAREERS SERIOUSLY

The new nursing weekly

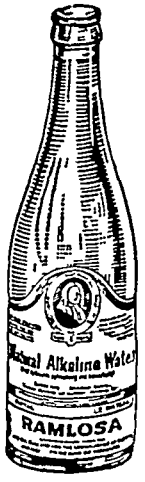
THERE may still be nurses who are content merely to wash patients, make beds, take temperatures, and blindly follow instructions But not many

The modern nurse takes her job seriously—brings all her intelligence to bear upon it She wants to understand the whys and wherefores of the treatments she gives She wants to keep abreast of every development affecting her work

For such women Nursing Illustrated is designed Every week leading nursing, medical and surgical authorities will bring you the latest information on every topic interesting to nurses Not in dull academic lectures, but in simply written language with copious illustrations

Whilst essentially a professional paper, Nursing Illustrated brings the same modern outlook to off-duty activities Regular features include lively articles on pastimes, fashion, needlework, books—all fully illustrated—together with competitions and a short story From all newsagents

CONTENTS No. 2 INCLUDES



Practical Nursing—Thyroidectomy
Anatomy & Physiology—The Kidneys
Clinical Demonstration—Goitre
The Nurse in the Witness Box
The Interpretation of X-rays—Colle's Fracture.
Notable Names—Spencer Wells Forceps
Examination of the Tongue
The Pathological Museum—Cancer of the Liver
The Brighton Poisoning Case
Midwifery—Ante-Natal Care.

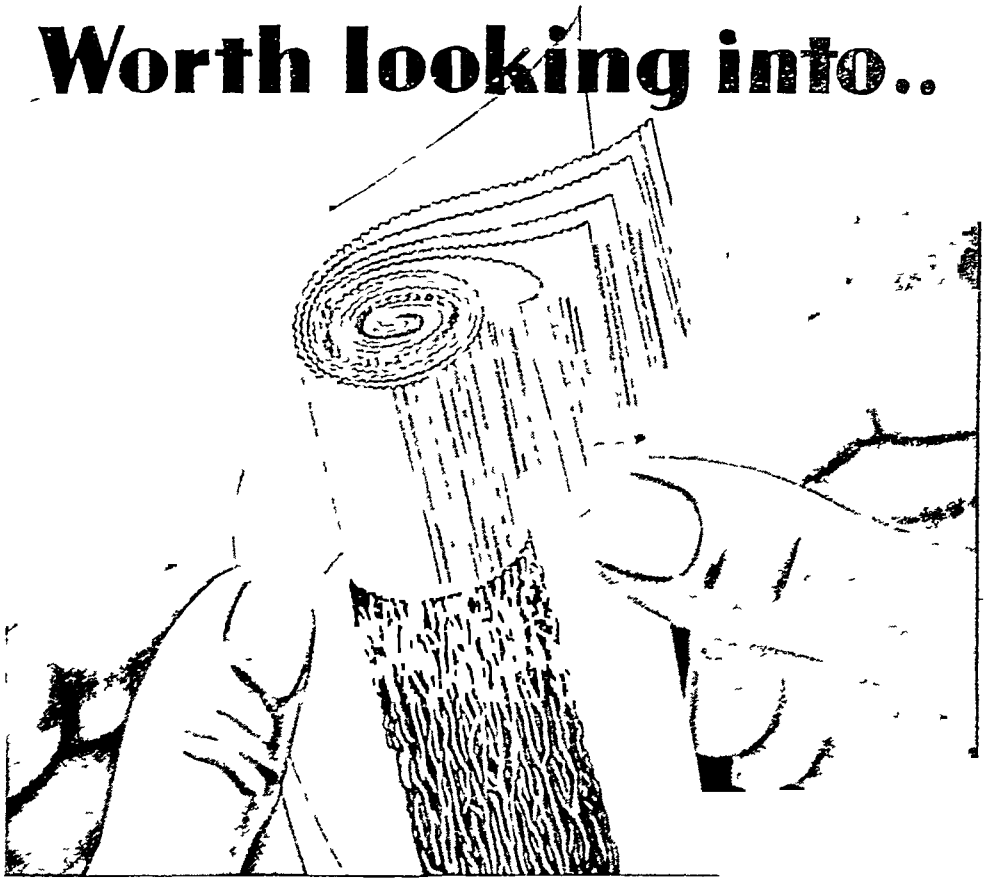
FOOT COMFORT

By wearing

'APTERNA' HEEL-LESS SHOES

These shoes are designed in the common-sense knowledge that the majority of foot troubles are due in large measure to faulty footwear which aggravates the trouble and does not permit the natural exercise and freedom which is essential to foot health



Any of the common foot ailments mentioned in the above diagram can be successfully prevented and relieved by prescribing the correct cries of "Apterna" Heel less Shoes

Apterna" Shoes are available for men, women and children

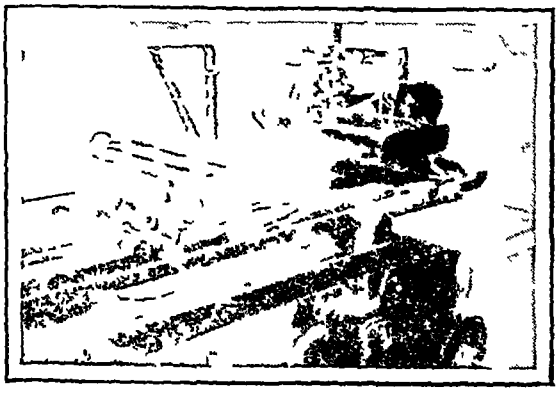
Worth looking into..



Inside the du Maurier filter tip there are five closely rolled layers. Two of cellulose fibre have been carefully interleaved with three of pure white vegetable tissue This allows the full flavour of Virginia tobacco to pass the lips, but keeps out the bits of tobacco and other irritants That's why sensitive throats are so safe with "du Maurier" (either cork tipped in the red box or plain tipped in the blue box)

du MAURIER

the perfect cigarette with the exclusive filter tip

TEN FOR SIXPENCE—TWENTY FOR ONE SHILLING

THE IMPORTANCE OF PRECISION POLISHING

Precision Automatic Polishing in one operation of twelve catgut strands each 10 feet in length

In order to obtain uniformity of calibre and complete roundness of strand along its entire length, A & H Catgut is polished by automatic machinery

Hand polishing of individual strands fails to obtain this desirable precision and uniformity in the production of surgical catgut strands

One of the modern advantages incorporated in the production of A & H Catgut

The entire product manufactured in England

A descriptive booklet will be sent on application

A doctor's adaptation of the medical tampon to Menstrual Hygiene

TAMPAX ★ SANITARY PROTECTION WORN INTERNALLY

The efficacy and safety of the vaginal tampon for the purpose of absorbing cervical discharges at the site are recognised by every doctor Realising that the application of the same principle to menstrual hygiene would spare the patient much local discomfort and minimise risk of infection, a physician designed an adaptation of the vaginal tampon for regular monthly use Tampax is its perfected form

Tampax is made of long fibred surgical cotton wool, which has been sterilised and highly compressed Each tampon is individually sealed within its own patented applicator which enables every user to insert it in the proper position without contact with the hands It is removed simply by means of a cord sewn through the cotton wool by an exclusive stitching process which makes disintegration impossible

Each tampon has an absorption capacity of 1-1½ ounces As it absorbs the fluids, the tampon opens gently to a soft mass, comfortably adapting itself to the size and form of the vaginal walls Irritation and chafing are thus eliminated As the tampon is contained in the vagina away from contact with the urethra, contamination from this source is minimised Infections of rectal origin are likewise avoided

Tampax ensures the maximum cleanliness and comfort, and affords complete protection Tampax may confidently be recommended for use by married women during normal menstruation Its use by unmarried girls should not be advocated when the size of the hymeneal aperture would cause difficulty in insertion and withdrawal

We will be glad to send doctors a full size package of Tampax, together with a folder giving more details on request to Tampax Ltd, 10 Bolton Street, London, W 1

Similar Names — Dissimilar Properties

In scope and character 'Benzedrine' Tablets and 'Benzedrine' Inhaler are completely different

SAFEGUARDED

'Benzedrine' TABLETS—The tablets contain the SULPHATE of β-aminoisopropylbenzene (5 mg) and are administered orally

On and after January 1, 1939, they can be supplied only on the written authority of a registered medical practitioner or on the signing of the Poisons Register 'Benzedrine' Brand Tablets have a striking effect in stimulating the central nervous system and have proved of value in narcolepsy, post-encephalitic Parkinsonism, depressive and asthenic states, impaired mental efficiency, and gastro-intestinal spasm

UNRESTRICTED

'Benzedrine' INHALER.—This aluminium tube is packed with VOLATILE β-aminoisopropylbenzene, which possesses a decongestive potency greater than that of ephedrine

After careful examination, this Inhaler has been totally and authoritatively exempted from all restrictions of sale by the Poisons (Amendment) Rules, 1938 It is *perfectly safe*, even for young children, and is indicated for shrinking the nasal mucosa in head colds, sinusitis, nasal catarrh, hay fever, and asthma

Distributed by

MENLEY & JAMES, LTD, 64, HATTON GARDEN, LONDON, E.C.1

for Smith Kline and French Laboratories, owners of the Registered Trade Mark, 'Benzedrine'

WHY WAIT FOR INTRAVENOUS SOLUTIONS?

Baxter's Intravenous Solutions of Dextrose, Saline and Acacia are ready for use in the "Vacoliter" container in less than three minutes from stockroom to patient In "Vacoliters" Baxter's Solutions are always ready when you are ready to use them

Baxter's Intravenous Solutions in 'Vacoliters" make it possible for you to have Intravenous Solutions ready in any quantity and to keep them at the highest degree of purity, stability, sterility and of a constant pH value They cannot become contaminated because they are packed in a high vacuum and tightly sealed with a metal closure

Baxter's service of Intravenous Solutions in Vacoliters ' is unmatched, and is not more costly than your own product

LIVOGEN

In conformity with the recent findings concerning the rôle of the Vitamin B complex in metabolism, Livogen has been modified so that it now includes an adequate dosage of —

VITAMIN B_1	(aneurin)
VITAMIN B_2	(lactoflavine)
VITAMIN B_6	(an anti-anæmic factor)
NICOTINIC ACID	(precursor of the P P factor)

as well as all the hæmatopoietically active principles of fresh liver

Livogen supplies, therefore, ample and balanced quantities of the principal essentials for health and vigour which are commonly lacking in the diet of convalescents, and corrects the ill-effects of partial or complete deficiency

Vitamin B_1 B D H, Lactoflavine B D H and Nicotinic Acid B D H are also issued separately for medicinal use

A sample of Livogen will be gladly sent on request

FOR EFFECTIVE CONTROL OF PAIN

AMONG the many and diverse analgesics which have been evolved by modern chemical research acetyl salicylic acid retains its reputation as one of the safest and most effective Its tendency to liberate salicylic acid—the irritant properties of which are well known to physicians—has however, caused many to hesitate to employ it as widely as it deserves Exhaustive trial in hospital and private practice proves that Alasil definitely solves the problem of administering acetyl salicylic acid in an effective form being free from the risk of irritating the stomach or bowels or of causing general reactions

A supply for clinical trial with full descriptive literature sent free on request

In 'Alasil" the desirable therapeutic effects of acetyl salicylic acid are well exhibited by its calcium acetyl salicylate moiety while the presence of Alocol' (Colloidal Hydroxide of Aluminium) a powerful gastric sedative and antacid obviates any tendency to gastric irritation The superior absorbability of "Alasil over ordinary salicylate compounds and its freedom from the risk of liberating free salicylic acid in the stomach have been well proved by careful experimentation Alasil' can be prescribed with perfect safety to patients of all ages and in larger doses than ordinary salicylate compounds

Vesical Neck Fibrosis

ARGYROL

BRAND SILVER VITELLIN

Urologists are generally agreed that vesical neck fibrosis or median bar is a late sequel of prostatic or perivesical inflammation which frequently responds to conservative non-operative measures. Prostatic massage, dilatation, instillations of 10-20 per cent. Argyrol solution in the bladder and special attention to possible remote foci of infection often suffice to afford relief and thus prevent the otherwise inevitable resection or prostatectomy.

Argyrol is especially useful in the infected bladder which generally accompanies the fibrosis because of its unique sedative and bacteriostatic properties. The irritable bladder with its distressing symptoms usually make a strikingly quick response to the soothing influence of Argyrol and soon functions normally without pain or distress. Chemically different from all other silver products, Argyrol although it is a mild silver protein in fact the prototype of all silver proteins is in a class by itself—*sui generis*. It has never been duplicated and it is the only silver salt which does not tend to become irritating with increased concentrations.

Insistence on having the name ARGYROL on all solutions ordered or prescribed will ensure the clinical results you expect.

OESTROFORM

For Rapid Relief of Menopausal Symptoms

Oestroform, being an ester of the pure oestrogenic hormone, possesses a specific action in the treatment of symptoms associated with the menopause

MILD CASES OF MENOPAUSAL DISTURBANCE

rapidly respond to the oral administration of Oestroform tablets An initial dose of 10,000 international units three times daily is recommended, and this is reduced to one of 1000 international units three times daily immediately the symptoms have been brought under control

SEVERE CASES OF MENOPAUSAL DISTURBANCE

require an injection of Oestroform 20,000 international benzoate units (in advanced cases 50,000 international benzoate units) twice weekly Again the dose is reduced immediately the symptoms abate, and the optimum dosage by oral administration of tablets that is necessary to keep the symptoms in abeyance is determined

BELZEMA SOAP

cleanses and prepares the skin for the absorbtion of BELZEMA ointment - It is absolutely pure—contains no synthetic perfume—no artificial colouring—no free alkali —recommended for personal hygiene

FORMULA

Thyminic Acid	0 10
Hexamethylenetetramine Anhydromethylenecitrate	0 50
Hexamethylene Tetramine	2 50
Piperazine Tartrate	0 25
Lithium Carbonate	1 00
Sodium Benzoate	1 00
Effervescent Base	ad 100

DIRECTIONS

One teaspoonful to be taken morning and night in a tumblerful of water

Uralysol, in addition to being a solvent and eliminator of pathological Uric Acid, is a powerful urinary antiseptic.

Normally there exists in the body a certain quantity of uric acid, which assists general metabolism, and after it has played its part is eliminated together with the normal thyminic acid of the organism When, however, uric acid is present in excess, the body needs additional thyminic acid to supplement the resultant deficit of this normal solvent of uric acid

Uralysol, by its thyminic acid content, supplies the agent necessary to dissolve excessive uric acid

The next step is the elimination of this thyminic uric acid which, being in excess of normal, necessitates treatment by an agent capable of enhancing elimination

Uralysol, by its content of hexamethylenetetramine and lysidin, stimulates the organism to eliminate the pathological uric acid already dissolved by its thyminic acid content.

MILK INTOLERANCE

Benger's Food is devised to be used in conjunction with fresh cow's milk For many years it has been used by Physicians everywhere as a routine diet in gastric cases and in cases of milk intolerance In its composition Benger's differs from all other foods, e g, in addition to its base of specially treated wheaten flour it contains the two natural digestive principles — Amylase and Trypsin — in a latent state These exert their digestive powers during preparation The Amylopsin acts on the carbohydrates and gradually changes them into soluble sugars, while the Trypsin acts on the gluten of the flour, and on the proteins of the milk The prepared Benger's Food forms a fine soft flocculent curd in the stomach, in marked contrast to the large indigestible curd formed by milk *The extent of the digestion of Benger's Food can be varied to suit the digestive condition, and it is important to note that undigestion can never take place*

Benger's Food contains no preservatives It is palatable and free from rough irritant particles

THE LANCET describes it as "Mr Benger's admirable preparation"

INDICATIONS FOR SANATOGEN No 13

APPENDICITIS

Diagnosis and Expectant Treatment.

At the Plymouth meeting of the B M A, it was pointed out that, in spite of surgical advances, 3,000 deaths from appendicitis are still annually registered in Great Britain Yet the mortality from operations for acute appendicitis before diffuse peritonitis has resulted is trivial The moral is obvious Once the diagnosis is reasonably established, immediate operation is desirable But early diagnosis is not always simple

The characteristic sequence of sudden abdominal pain, vomiting and tenderness in the right iliac fossa does not invariably occur, and thus a short period of expectant treatment is often forced on the surgeon

When there is even the slightest suspicion of appendicitis, it is agreed that complete rest in bed should be insisted on, as should the avoidance of aperients and of morphia Food should be reduced to the barest minimum, and it should be such as leaves no residue Even water should be taken in small quantities

Both during the days of expectant treatment, and during the period following symptom-subsidence or operation, 'SANATOGEN' has been found of great value 'SANATOGEN' is a carbohydrate-free product of ninety-five per cent pure milk casein with five per cent sodium glycerophosphate It is readily digested and absorbed, leaving no appreciable residue, and it is non-irritating to the intestinal mucous membrane

I have recently had good results with SANATOGEN in post operative cases One case in particular a hard working housewife supporting a large family right up to the time of her operation No holiday for several years and consequently little or no resistance and due for a severe reaction after a mild pelvic operation I put her on SANATOGEN before and after operation with I am convinced exceptionally good results —M D

I cannot speak too highly of your SANATOGEN I had a very severe abdominal operation about six years ago and for years I found I could not do without it I always slept better when I was taking it and still have it "— L R C P I & L M L R C S I & L M

I have recommended SANATOGEN to several patients who are suffering from nervous troubles and have given it to a patient who is convalescing after a serious abdominal operation The results obtained in this particular case are excellent and the patient expresses great satisfaction with SANATOGEN —M B Ch B

'SANATOGEN'

(Trade Mark)

A brand of Casein and Sodium Glycerophosphate

Sold by all chemists Price 2/6 to 10/9

DOSAGE For children and adult two teaspoonsful three times daily or according to circumstances For infant teaspoonful added to each bottle fed
